# ADVERTISEMENT.

THIS book has returned by purchase into the possession of the heirs of the late WARREN COLBURN, and will hereafter be published for their benefit. The Introduction, by GEORGE B. EMERSON, gives some valuable hints as to the proper use of the book. The Original Preface, in which the design and plan of the work are stated at length by the Author, has been restored. A careful perusal of this Introduction and Preface is earnestly recommended to all teachers who make use of the book.

H. O. HOUGHTON.

Cambridge, June, 1863.

## INTRODUCTION.

ar

THIS little book has now been in constant use for forty years, and its value has been proved by the entire and admiring approbation of thousands of the best teachers. Yet its very simplicity has prevented many persons from seeing how really profound and comprehensive it is, and that it actually develops every essential principle in elementary arithmetic. Want of attention and the previous use of poorer books have also misled many persons as to the proper and true mode of using it.

It is strictly a *mental* arithmetic, and, if faithfully used in the way intended by the author, it evolves from the mind of the learner himself, in a perfectly easy and natural manner, a knowledge of the principles of arithmetic, and the power of solving, mentally and almost instantly, every question likely to occur in the every-day business of common life.

It can be well taught only by a teacher who perfectly understands it, and who knows how to teach. Such a teacher will not allow the lesson to be previously studied by the pupil. Each section is intended to teach some one process up to a certain point. If, in the course of the section, questions occur which the class cannot readily solve without previous study, the teacher has only to interpose, at the point where the class fails, or begins to fail, addi-5417733

# INTRODUCTION.

tional questions of the same kind, somewhat easier than those in the book. If, at the end of the section, the class be not perfectly ready in the solution of the questions, the teacher ought to go over the section again, with the class, or to add, at the end of the section, a sufficient number of similar questions to render the solution easy and instantaneous.

By allowing the class to study the lesson beforehand, not only is much time lost, but the exercise is turned into a poor sort of mechanical process not much better than the common ciphering. Its mental character ceases almost entirely.

As an exercise in exact reasoning, the mental solution of questions is very valuable; not less so than geometrical demonstration, and preferable in the fact that it is purely mental. It is thus an admirable preparation for the attainment of the faculty of ready and sharp logic, to be applied to the business of common life, where the mental habit alone is available. Its great value for children is in its shortness and its clearness. For example : - What is 1 of 2 of 2 of 4? Answer: 1 of 2 of 3 of 4 is 1; for 1 of 2 is  $\frac{1}{3}$ ;  $\frac{1}{3}$  of  $\frac{3}{4}$  is  $\frac{1}{4}$ ;  $\frac{1}{4}$  of  $\frac{4}{5}$  is  $\frac{1}{5}$ ; therefore,  $\frac{1}{5}$  of  $\frac{2}{3}$  of  $\frac{3}{4}$  of  $\frac{4}{5}$ is 1. Similar examples are found in almost every section in the book. Now, the going faithfully through many such processes, every day for years, at the age at which mental habits are formed, must have the effect of forming habits of clearness, accuracy, and exact reasoning, which, once fully formed, will always exert a happy influence over the mind.

This book ought not to be used with beginners only. Its effect upon those far advanced is even better and more striking. It might be continued, with the greatest advan-

# INTRODUCTION

tage, till the end of every course of instruction; and, if so continued, would have the constant effect of sharpening the perception and varying the ability of analysis, of giving perfect readiness in the mental solution of all common problems, and of fixing the habit of clearness, quickness, and accuracy in the process of exact reasoning.

GEORGE B. EMERSON.

May, 1863.

As soon as a child begins to use his senses, nature continually presents to his eyes a variety of objects; and one of the first properties which he discovers is the relation of number. He intuitively fixes upon *unity* as a measure and from this he forms the idea of more and less; which is the idea of quantity.

The names of a few of the first numbers are usually learned very early; and children frequently learn to count as far as a hundred before they learn their letters.

As soon as children have the idea of more and less, and the names of a few of the first numbers, they are able to make small calculations. And this we see them do every day about their playthings, and about the little affairs which they are called upon to attend to. The idea of more and less implies addition; hence they will often perform these operations without any previous instruction. If, for example, one child has three apples, and another five, they will readily tell how many they both have; and how many one has more than the other. If a child be requested to bring three apples for each person in the room, he will calculate very readily how many to bring, if the number does not exceed those he has learnt. Again, if a child be requested to divide a number of apples among a certain number of persons, he will contrive a way to do it, and will

. Well how many each pust have. The method which children take to do these things, though always correct, is not always the most expeditious.

The fondness which children usually manifest for these exercises, and the facility with which they perform them, seem to indicate that the science of numbers, to a certain extent, should be among the first lessons taught to them.

To succeed in this, however, it is necessary rather to furnish occasions for them to exercise their own skill in performing examples, than to give them rules. They should be allowed to pursue their own method first, and then they should be made to observe and explain it; and if it was not the best, some improvement should be suggested By following this mode, and making the examples gradually increase in difficulty, experience proves, that at an early age, children may be taught a great variety of the most useful combinations of numbers.

Few exercises strengthen and mature the mine so much as arithmetical calculations, if the examples are made sufficiently simple to be understood by the pupil; because a regular though simple process of reasoning is requisite to perform them, and the results are attended with certainty.

The idea of number is first acquired by observing sensible objects. Having observed that this quality is common to all things with which we are acquainted, we obtain an abstract idea of number. We first make calculations about sensible objects; and we soon observe that the same calculations will apply to things very dissimilar; and finally, that they may be made without reference to any particular things. Hence, from particulars, we establish general principles, which serve as the basis of our reasonings, and enable us to proceed, step by step, from the most simple to the

more complex operations. It appears, therefore mathematical reasoning proceeds as much upon the priciple of analytic induction, as that of any other strenges.

From the above observations, and from his own experence, the author has been induced to publish this pratises in which he has pursued the following plan, which reemed to him the most agreeable to the natural progress of the mind.

## GENERAL VIEW OF THE PLAN.

EVERY combination commences with practical examples. Care has been taken to select such as will aptly illustrate the combination, and assist the imagination of the pupil in performing it. In most instances, immediately after the practical, abstract examples are placed, containing the same numbers and the same operations, that the pupil may the more easily observe the connection. The instructor should be careful to make the pupil observe the connection. After these are a few abstract examples, and then practical questions again.

The examples are to be performed in the mind, or by means of sensible objects, such as beans, nuts, &c. The pupil should first perform the examples in his own way, and then be made to observe and tell how he did them, and why he did them so.\*

\* It is remarkable that a child, although he is able to perform a variety of examples which involve addition, subtraction, multiplication, and division, recognizes no operation but addition. In deed, if we analyze these operations when we perform them it our minds, we shall find that they all reduce themselves to addition. They are only different ways of applying the same princiole. And it is only when we use an artificial method of performing them, that they take a different form.

The first section contains addition and subtraction, the second multiplication. The third section contains division In this section the pupil learns the first principles of fractions and the terms which are applied to them. This is done by making him observe, that one is the half of two, the third of three, the fourth of four, &c., and that two is two thirds of three, two fourths of four, two fifths of five, &c.

The fourth section commences with multiplication. In this the pupil is taught to repeat a number a certain number of times, and a part of another time. In the second part of this section the pupil is taught to change a certain number of twos into threes, threes into fours, &c.

If the following questions were proposed to a child, his answers would be, in substance, like those annexed to the questions. How much is five less than eight? Ans.: Three. Why? Because five and three are eight. What is the difference between five and eight? Ans.: Three. Why? Because five and three are eight. If you divide eight into two parts, such that one of the parts may be five, what will the other be? Ans.: Three. Why? Because five and three are eight.

How much must you give for four apples at two cents apiece? Ans.: Eight cents. Why? Because two and two are four, and two are six, and two are eight.

How many apples, at two cents apiece, can you buy for eight cents? Ans.: Four. Why? Because two and two are four, and two are six, and two are eight.

We shall be further convinced of this, if we observe that the same table serves for addition and subtraction; and another table, which is formed by *addition*, serves both for multiplication and division.

This remark shows the necessity of making the pupil attend to his manner of performing the examples and of explaining to him the difference between them.

In the fifth section the pupil is taught, to find  $\frac{1}{2}$ ,  $\frac{1}{3}$ ,  $\frac{1}{4}$ ,  $\frac{1}{3}$ ,  $\frac{1}{4}$ ,  $\frac{1}{3}$ ,  $\frac{3}{4}$ ,  $\frac{3$ 

In the sixth section the pupil learns to tell of what number any number, as 2, 3, 4, &c., is one half, one third, one fourth, &c.; and also knowing  $\frac{2}{3}$ ,  $\frac{3}{4}$ ,  $\frac{4}{5}$ , &c. of a number, to find that number.

. These combinations contain all the most common and most useful operations of vulgar fractions. But being applied only to numbers which are exactly divisible into these fractional parts, the pupil will observe no principles but multiplication and division, unless he is told of it. In fact, fractions contain no other principle. The examples are so arranged that almost any child of six or seven years old will readily comprehend them. And the questions are asked in such a manner that, if the instructor pursues the method explained in the Key, it will be almost impossible for the pupil to perform any example without understanding the reason of it. Indeed, in every example which he performs, he is obliged to go through a complete demonstration of the principle by which he does it; and at the same time he does it in the simplest way possible. These observations apply to the remaining part of the book.

These principles are sufficient to enable the pupil to perform almost all kinds of examples that ever occur. He will not, however, be able to solve questions in which it is necessary to take fractional parts of unity, though the principles are the same.

After section sixth, there is a collection of miscellaneous sxamples, in which are contained almost all the kinds that

baually occur. There are none, however, which the principles explained are not sufficient to solve.

In section eighth and the following, fractions of unity are explained, and, it is believed, so simply as to be intelligible to most pupils of seven or eight years of age. The operations do not differ materially from those in the preceding sections. There are some operations, however, peculiar to fractions.

When the pupil is made familiar with all the principles contained in this book, he will be able to perform all examples, in which the numbers are so small that the operations may be'performed in the mind. Afterwards he has only to learn the application of figures to these operations, and his knowledge of arithmetic will be complete.

The following are some of the principal difficulties which a child has to encounter in learning arithmetic, in the usual way, and which are seldom overcome. First, the examples are so large that the pupil can form no conception of the numbers themselves; therefore it is impossible for him to comprehend the reasoning upon them. Secondly, the first examples are usually abstract numbers. This increases the difficulty very much; for even if the numbers were so small that the pupil could comprehend them, he would discover but very little connection between them and practical examples. Abstract numbers, and the operations upon them, must be learned from practical examples; there is no such thing as deriving practical examples from those which are abstract, unless the abstract have been first derived from those which are practical. Thirdly, the numbers are expressed by figures, which, if they were used only as a contracted way of writing numbers, would be much more difficult to be understood at first than the

numbers written at length in words. But they are not used merely as words, they require operations peculiar to themselves. They are, in fact, a new language, which the pupil has to learn. The pupil, therefore, when he commences arithmetic, is presented with a set of abstract numbers, written with figures, and so large that he has not the least conception of them even when expressed in words. From these he is expected to learn what the figures signify, and what is meant by addition, subtraction, multiplication, and division; and at the same time how to perform these operations with figures. The consequence is, that he learns only one of all these things, and that is, how to perform these operations on figures. He can perhaps translate the figures into words, but this is useless, since he does not understand the words themselves. Of the effect produced by the four fundamental operations he has not the least conception.

After the abstract examples, a few practical examples are usually given, but these again are so large that the pupil cannot reason upon them, and consequently he could not tell whether he must add, subtract, multiply, or divide, even if he had an adequate idea of what these operations are.

The common method, therefore, entirely reverses the natural process; for the pupil is expected to learn general principles, before he has obtained the particular ideas of which they are composed.

The usual mode of proceeding is as follows. The pupil learns a rule, which, to the man that made it, was a general principle; but with respect to *him*, and oftentimes to the instructor himself, it is so far from it, that it hardly deserves to be called even a mechanical principle. He per-

forms the examples, and makes the answers agree with those in the book, and so presumes they are right. He is soon able to do this with considerable facility, and is then supposed to be master of the rule. He is next to apply his rule to practical examples; but if he did not find the examples under the rule, he would never so much as mistrust they belonged to it. But finding them there, he applies his rule to them, and obtains the answers, which are in the book, and this satisfies him that they are right. In this manner he proceeds from rule to rule through the book.

When an example is proposed to him, which is not in the book, his sagacity is exercised, not in discovering the operations necessary to solve it, but in comparing it with the examples which he has performed before, and endeavoring to discover some analogy between it and them, either in the sound, or in something else. If he is fortunate enough to discover any such analogy, he finds what rule to apply; and if he has not been deceived in tracing the analogy, he will probably solve the question. His knowledge of the principles of his rules is so imperfect, that he would never discover to which of them the example belongs, if he did not trace it, by some analogy, to the examples which he had found under it.

These observations do not apply equally to all; for some will find the right course themselves, whatever obstacles be thrown in their way. But they apply to the greater part; and it is probable that there are very few who have not experienced more or less inconvenience from this mode of proceeding. Almost all, who have ever fully understood arithmetic, have been obliged to learn it over again in their own way. And it is not too bold an assertion to say, that no man ever actually learned mathematics in any other method than by analytic induction; that is, by learning the principles by the examples he performs; and not by learning principles first, and then discovering by them how the examples are to be performed.

### THE BOY WITHOUT A GENIUS.

MR. WISEMAN, the schoolmaster, at the end of his summer vacation, received a new scholar, with the following letter:

SIR, — This will be delivered to you by my son, Samuel, whom I beg leave to commit to your care, hoping that by your well-known skill and attention you will be able to make something of him; which, I am sorry to say, none of his masters have hitherto done. He is now eleven, and yet can do nothing but read his mother-tongue, and that but indifferently. We sent him at seven to a grammar school in our neighborhood; but his master soon found that his genius was not turned to learning languages. He was then put to writing, but he set about it so awkwardly that he made nothing of it. He was tried at accounts, but it appeared that he had no genius for that neither. He could do nothing in geography for want of memory. In short, if he has any genius at all, it does not yet show itself. But I trust to your experience in cases of this nature to discover what he is fit for, and to instruct him accordingly. I beg to be favored shortly with your opinion about him, and remain. sir,

Your most obedient servant,

#### HUMPHREY ACRES.

When Mr. Wiseman had read this letter, he shook his head, and said to his assistant, A pretty subject they have sent us here ! a lad that has a great genius for nothing at all. But perhaps my friend Mr. Acres expects that a boy should show a genius for a thing before he knows anything about it, — no uncommon error! Let us see, however, what the youth looks like. I suppose he is a human creature at least.

Master Samuel Acres was now called in. He came, hanging down his head, and looking as if he was going to be flogged.

15

Come hither, my dear! said Mr. Wiseman. Stand by me, and do not be afraid. Nobody will hurt you. How old are you?

Eleven last May, sir.

A well-grown boy of your age, indeed. You love play, I dare say ?

Yes, sir.

What, are you a good hand at marbles ?

Pretty good, sir.

And can spin a top and drive a hoop, I suppose ? Yes, sir.

Then you have the full use of your hands and fingers ? Yes, sir.

Can you write, Samuel?

I learned it a little, sir, but I left it off again.

And why so ?

Because I could not make the letters.

No ! why, how do you think other boys do ? Have they more fingers than you ?

No, sir.

Are you not able to hold a pen as well as a marble ? Samuel was silent.

Let me look at your hand.

I see nothing here to hinder you from writing as well as any boy in the school. You can read, I suppose?

Yes, sir.

Tell me, then, what is written over the school-room door? Samuel, with some hesitation, read, WHATEVER MAN HAS DONE MAN MAY DO.

Pray, how did you learn to read ? Was it not with taking pains ?

Yes, sir.

Well, — taking more pains will enable you to read better. Do you know anything of the Latin grammar ?

No, sir.

Have you never learned it?

I tried, sir, but I could not get it by heart.

Why, you can say some things by heart. I dare say you can tell me the names of the days of the week in their order

Yes, sir, I know them.

And the months in the year, perhaps?

Yes, sir.

And you could probably repeat the names of your brothers and sisters, and all your father's servants, and half the people in the village besides?

I believe I could, sir

Well, — and is *hic*, *hac*, *hoc*, more difficult to remember than these ?

Samuel was silent.

Have you learned a ything of accounts?

I went into addition, sir, but I did not go on with it. Why so?

I could not do it, sir.

How many marbles can you buy for a penny ?

Twelve new ones, sir.

And how many for a half-penny ?

Six.

And how many for two-pence?

Twenty-four.

If you were to have a penny a day, what would that make in a week ?

Seven-pence.

But if you paid two-pence out of that, what would you have left?

Samuel studied a while, and then said, five-pence.

Right. Why, here you have been practising the four great rules of arithmetic, — addition, subtraction, multiplication, and division. Learning accounts is no more than this. Well, Samuel, I see what you are fit for. I shall set you about nothing but what you are able to do; but observe, you *must* do it. We have no I can't here. Now, go among your schoolfellows.

Samuel went away, glad that his examination was over, and with more confidence in his powers than he had felt before.

The next day he began business. A boy less than himself was called out to set him a copy of letters, and another was appointed to hear him in grammar. He read a few sentences in English, that he could perfectly understand, to the master himself. Thus by going on steadily and slowly, he made a sensible progress. He had already joined his letters, got all the declensions perfectly, and half the multiplication-table, when Mr. Wiseman thought it time to answer his father's letter; which he did as follows:

Sig. — I now think it right to give you some information concerning your son. You perhaps expected it sconer, but I always wish to avoid hasty judgments. You mentioned in your letter that it had not yet been discovered which way his genius pointed. If by *genius* you meant such a decided bent of mind to any one pursuit as will lead to excel with little or no labor or instruction. I must say that I have not met with

2

such a quality in more than three or four boys in my life, and your son is certainly not among the number. But if you mean only the ability to do some of those things which the greater part of mankind can do when properly taught, I can affirm that I find in him no peculiar deficiency. And whether you choose to bring him up to trade (r to some practical profession, I see no reason to doubt that he may in time become sufficiently qualified for it. It is my favorite maxim, sir, that everything most valuable in this life may generally be acquired by taking pains for it. Your son has already lost much time in the fruitless expectation of finding out what he would take up of his own accord. Believe me, sir, few boys will take up anything of their own accord but a top or a marble. I will take care, while he is with me, that he loses no more time this way, but is employed about things that are fit for him, not doubting that we shall find him fit for I am, sir, yours, &c., them.

SOLON WISEMAN.

Though the doctrine of this letter did not perfectly agree with Mr. Acres' notions, yet being convinced that Mr. Wiseman was more likely to make something of his son than any of his former preceptors, he continued him at his school for some years, and had the satisfaction to find him going on in a steady course of gradual improvement. In due time a profession was chosen for him, which seemed to suit his temper and talents, but for which fle had no particular turn, having never thought at all about it. He made a respectable figure in it, and went through the world with credit and usefulness, though without a genius.

Mrs. Barbauld.

## ARITHMETIC.

## PART I.

## SECTION I.

**A.\*** 1. How many thumbs have you on your right hand? how many on your left? how many on both together?

2. How many hands have you?

3. If you have two nuts in one hand, and one in the other, how many have you in both?

4. How many fingers have you on one hand?

5. If you count the thumb with the fingers, how many will it make?

6. If you shut your thumb and one finger, and leave the rest open, how many will be open?

7. If you have two cents in one hand, and two in the other, how many have you in both?

8. James has two apples, and William has three; if James gives his apples to William, how many will William have?

9. If you count all the fingers on one hand, and two on the other, how many will there be?

10. George has three cents, and Joseph has four; how many have they both together?

\* The first questions in this section are intended for very young children. It will be well for the instructor to giv a great many more of this kind. Older pupils may omit these.

11. Robert gave five cents for an orange, and two for an apple; how many did he give for both?

12. If a custard cost six cents, and an apple two cents, how many cents will it take to buy an apple and a custard?

13. If you buy a pint of nuts for five cents, and an orange for three cents, how many cents would you give for both? how many more for the nuts than for the orange?

14. If an ounce of figs is worth six cents, and a half a pint of cherries is worth three cents, how much are they both worth?

15. Dick had five plums, and John gave him four more; how many had he then?

16. How many fingers have you on both hands?

17. How many fingers and thumbs have you on both hands?

18. If you had six marbles in one hand, and four in the other, how many would you have in the one more than in the other? how many would you have in both hands?

19. David had seven nuts, and gave three of them to George; how many had he left?

20. Two boys, James and Robert, bought seven marbles apiece; James gave Robert four of his; how many had each then?

21. A boy, having eleven nuts, gave away three of them; how many had he left?

22. If you had eight cents, and your papa should give you five more, how many would you have?

23. A man bought a sheep for eight dollars, and a calf for seven dollars; what did he give for both?

24. A man bought a barrel of flour for eight dollars, and sold it for four dollars more than he gave for it; how much did he sell it for?

25. A man bought a hundred-weight of sugar for

nine dollars, and a barrel of flour for seven dollars how much did he give for the whole?

26. A man bought three barrels of cider for eight dollars, and ten bushels of apples for nine dollars how much did he give for the whole?

27. A man bought a firkin of butter for twelve dollars, but, it being damaged, he sold it again for eight dollars : how much did he lose? .

28. A man bought three sheep for fifteen dollars, but could not sell them again for so much by eight dollars; how much did he sell them for?

29. A man bought sixteen pounds of coffee, and lost seven pounds of it as he was carrying it home; how much had he left?

30. A man bought nineteen pounds of sugar, and having lost a part of it, he found he had nine pounds left; how much had he lost?

31. A man, owing fifteen dollars, paid nine dollars of it; how much did he then owe?

32. A man, owing seventeen dollars, paid all but seven dollars; how much did he pay?

- B. 1. Two and one are how many?
  - 2. Two and two are how many?
  - 3. Three and two are how many?
  - 4. Four and two are how many?
  - 5. Five and two are how many?
  - 6. Six and two are how many?
  - 7. Seven and two are how many?

18. Fifty-seven, and six, and three, and five, and two, less eight, are how many?

19. Sixty-three, and five, and four, and six, and two, less seven, are how many?

20. Seventy-five, and six, and eight, and three, and seven, and four, less nine, are how many?

21. Eighty-three, and six, and five, and two, and seven, and nine, less four, are how many?

22. Fifty-eight, and ten, and five, and seven, and three, and six, and four, less nine, are how many?

23. Sixty-seven, and five, and eight, and nine, and seven, less six, are how many?

24. Seventy-four, and nine, and seven, and five, and two, less six, are how many?

25. Seventy-eight, and seven, and six, and two, and five, and eight, less nine, are how many?

[Part 1.

26. Eighty-four, and seven, and six, and eight, and five, less ten, are how many?

27. Forty-seven, and eight, and six, and two, and four, and eight, and three, and seven, and ten, and nine, less five, are how many?

28. Thirty-five, and eight, and four, and six, and three, and four, less eleven, are how many?

29. Seventy, and ten, and six, and nine, and seven, and two, and five, and eight, and nine, less three, are how many?

H. 1. A man bought a cow for twenty-eight dollars, and a sheep for four dollars, and a pig for seven dollars; how much did he give for the whole?

2. James had twenty-seven cents; John gave him four more, David seven, and George eleven, and he bought nine cents' worth of cake; how many cents had he left?

3. A man paid sixteen dollars to A, nine dollars to B, seven dollars to C, ten dollars to D, six dollars to E, four dollars to F, and had eight dollars left; how many had he at first?

4. From Boston to Roxbury it is three miles; from Roxbury to Dedham, six miles; from Dedham to Walpole, eleven miles; from Walpole to Wrentham, four miles; from Wrentham to Attleborough, four miles; from Attleborough to Pawtucket, nine miles; from Pawtucket to Providence, four miles; how many miles is it from Boston to Providence?

5. One boy had fifteen nuts; another boy gave him seven; another, nine; and another gave him enough to make his number forty; how many did the last boy give him?

6. A boy had thirty-seven apples; he gave five to one companion; and eight to another; and when he had given some to another, he had six left; how many did he give to the last?

7. A man owed fifty-six dollars; at one time he paid seventeen dollars; at another, eight; at another, five; at another, seven; at last he paid the rest of the debt, wanting four dollars; how much was the last payment?

8. Six men bought a horse for seventy dollars; the first gave twenty-three dollars; the second, fifteen, the third, twelve; the fourth, nine; the fifth, seven; how much did the sixth give?

9. A man bought a horse for forty-five dollars and paid fifteen dollars for keeping him; he let him enough to receive twenty dollars; and then sold him for fortythree dollars; did he gain or lose by the bargain? and how much?

# SECTION II.

A. 1. WHAT cost three yards of tape, at two cents a yard?\*

2. What cost four apples, at two cents apiece?

3. What cost five peaches, at three cents apiece?

4. What must you give for two oranges, at six cents apiece ?

5. What would be the price of three barrels of cider, at three dollars a barrel?

6. If one orange is worth three apples, how many apples are four oranges worth?

7. What are two barrels of flour worth, at five dollars a barrel?

\* The pupil should be made to observe that three yards will cost three times as much as one yard; and say, if one yard cost two cents, three yards will cost three times two cents. He should be made to give this reason for the solution of each question, varying the numbers according to the question. 8. What cost three yards of cloth, at four dollars a yara?

9. What cost two pounds of raisins, at eight cents a pound?

10. What cost three lemons, at six cents apiece?

11. If a man travel three miles in an hour, how many miles will be travel in four hours?

12. What will five pair of shoes come to at two dollars a pair?

13. What is the price of seven yards of cloth, at three dollars a yard?

14. What is the value of two pounds of beef, at seven cents a pound?

15. If there are three feet in one yard, how many feet are there in four yards?

16. How many feet are there in seven yards?

17. How many feet are there in six yards and two feet?

18. If a man earn seven dollars in one week, how much would he earn in five weeks?

19. What cost seven hundred-weight of sugar, at nine dollars a hundred-weight?

20. What cost seven pounds of sugar, at ten cents a pound?

21. If one half yard of cloth cost three dollars, what would three yards cost?

22. If one quarter of a yard of cloth cost two dollars, what is that a yard?

23. How many yards of cloth are there in seven pieces, each piece containing ten yards?

24. What will five barrels of flour cost, at six dollars a barrel?

25. If a man can travel four miles in an hour, how far can he travel in eight hours?

26. If it take four bushels of wheat to make a barrel of flour, how many bushels will it take to make seven barrels?

B. 1. Two times one are how many? \* 2. Two times two are how many? 3. Two times three are how many? 4. Two times four are how many? 5. Two times five are how many? 6. Two times six are how many? 7. D. 1. What cost three yards of cloth at five dollars a yard?

2. What cost four oranges, at six cents apiece?

3. What cost seven barrels of cider, at three dollars a barrel?

4. How much do three barrels of flour come to, at seven dollars a barrel?

5. What cost four firkins of butter, at eight dollars a firkin?

6. What do nine pounds of veal come to, at six cents a pound?

7. What cost six reams of paper, at five dollars per ream

8. What cost eight pair of shoes, at three dollars a pair?

9. What is the value of nine yards of cloth, at six dollars a yard?

10. If a man travel five miles in an hour, how many miles will he travel in nine hours?

11. There is an orchard consisting of ten rows of trees, and nine trees in each row; how many trees are there in the orchard?

12. On a chess-board there are eight rows of squares, and eight squares in each row; how many squares are there on the board?

13. In one penny there are four farthings; how many farthings are there in six pence?

14. How many farthings are there in eight pence?

15. How many farthings are there in nine pence?

16. How many farthings are there in ten pence?

17. In one shilling there are twelve pence; how many farthings are there in a shilling?

18. In one pint there are four gills; how many gills are there in five pints?

19. In one quart there are two pints; how many pints are there in six quarts?

20. How many pints are there in three quarts?

21. How many gills are there in six pints?

22. How many gills are there in one quart?

23. How many gills are there in three quarts?

24. In one gallon there are four quarts; how many quarts are there in three gallons?

25. How many quarts are there in five gallons?

26. How many quarts are there in seven gallons?

27. How many pints are there in one gallon?

28. How many pints are there in three gallons?

29. How many gills are there in one gallon?

30. How many gills are there in five quarts?

31. How many gills are there in two gallons?

32. A person bought two oranges, at six cents

#### Sect. 2.]

#### ARITHMETIC.

apiece; and seven lemons, at four cents apiece; and five pears, at two cents apiece; how much did the whole come to?

33. If one pint of oil cost eight cents, what will one quart cost?

34. If one gill of alcohol cost four cents, what will one quart cost?

35. If one gill of beer cost two cents, what will one gallon cost?

36. If a stage runs seven miles in an hour, how far will it run in nine hours?

37. Two men start from the same place and travel different ways; one travels two miles in an hour; the other travels three miles in an hour; how far apart will they be at the end of one hour? How far at the end of two hours? How far at the end of three hours? How far at the end of four hours?

38. Two men start from the same place and travel the same way; one travels at the rate of two miles in an hour; the other, four; how far apart will they be in one hour? How far in two hours? How far in four hours?

39. If three men can do a piece of work in two days, how many days would it take one man to do it?

40. If four men can do a piece of work in five days, how many days would it take one man to do it?

41. If six men can do a piece of work in seven days, how many men would it take to do it in one day?

42. If a quantity of provisions will serve three men five days, how many men would it serve one day?

43. If a quantity of provisions will serve five mer seven days, how many days would it serve one man?

44. If fifteen dollars' worth of provisions will serve eight men five days, how many days will it serve one man?

45. A man had a piece of work to perform which

seven men could do in nine days, but it was necessary that the whole should be completed in one day; how many men must he employ ?

46. If the interest of one dollar is six cents a year what would be the interest of ten dollars for the same time ?

47. If the interest of one dollar is six cents for one year, what would be the interest of it for two years? for three years? for seven years?

48. If a man can earn seven shillings in a day, how many shillings will he earn in six days?

49. If a man can earn eight dollars in a month, how much can he earn in six months?

50. At five dollars a week, what will nine weeks' board come to?

51. A lady bought three yards of cambric at two dollars a yard, seven yards of silk for three dollars a vard, five yards of ribbon for four dollars, and some crape for two dollars ; she paid four ten-dollar bills ; how much must she receive back again?

# SECTION III.

A. 1. How many apples, at one cent apiece, can you buy for four cents?

2. How many pears, at two cents apiece, can you buy for four cents?

3. How many peaches, at three cents apiece, can you buy for six cents?

4. How many apples, at two cents apiece, can you buy for six cents? How many for eight cents?5. How many pears, at three cents apiece, can you

buy for nine cents? How many for twelve cents?

6. If you have eight apples to give to four boys, how many can you give to each?

7. If a man travel six miles in two hours, how many miles does he travel in an hour?

8. If a man travel three miles in an hour, how many hours will it take him to travel nine miles?

9. How many yards of cloth, at three dollars a yard, can you buy for fifteen dollars?

10. If you had sixteen cents, how many cakes could you buy at four cents apiece?

11. If you had ten dollars, how much cloth could you buy at five dollars a yard?

12. If you had twelve apples to give to six of your companions, how many would you give them apiece?

13. If a man can travel six miles in an hour, how long will it take him to travel eighteen miles?

14. If a man can travel five miles in an hour, how long will it take him to travel twenty miles?

15. In a certain orchard there are twenty-four trees standing in rows, and there are three trees in each row; how many rows are there?

16. In an orchard there are twenty-one trees, and there are seven trees in each row; how many rows are there?

17. A man paid twenty-seven dollars for some sheep, and he gave nine dollars apiece for them; how many sheep did he buy?

18. A man paid twenty-eight dollars for seven barrels of cider; how much did he give a barrel?

19. At five cents apiece, how many oranges can you buy for thirty cents?

20. Twenty-five are how many times five?

21. Thirty-two are how many times four? How many times eight?

22. Thirty-five are how many times seven? How many times five?

23. Thirty-six are how many times six? How many times nine? How many times four?

B. *Remark.* When any thing, or any number, is divided into two equal parts, one of the parts is called the half of the thing or the number.

1. If an apple is worth two cents, what is one half of it worth?

2. What is one half of two cents?

Ans. One cent.

Q. Why?

A. Because, if you divide two cents into two equal parts, one of the parts is one cent.

3. If you can buy a cake for two cents, how much can you buy for one cent?

4. One is what part of two?

Ans. One is the half part of two.

5. Two times one are how many times two?

6. If you can buy one pear for two cents, how many can you buy for three cents?

7. Three are how many times two?

Ans. Once two and one half of two.

8. Four are how many times two?

9. If two shillings will buy one yard of cotton cloth, how many yards will five shillings buy?

10. Five are how many times two?

Ans. Two times two and one half of two.

11. Six are how many times two?

12. If two dollars will buy a yard of cloth, how many yards will seven dollars buy?

13. How many halves make a whole one?

14. Eight are how many times two?

15. Nine are how many times two?

16. Ten are how many times two?

*Remark.* When any thing, or any number, is divided into three equal parts, one of those parts is called the *third* part of the thing or number. When it is divided into four equal parts, one part is called the *fourth* part, and so on.

17. If a yard of cloth be worth three dollars, and

[Part 1.

it be cut into three equal pieces, what will one of the pieces be worth? that is, what will one third of a yard be worth?

18. What is a third of three?19. Suppose the yard of cloth to be cut as before, what will two pieces of it cost? that is, what will two thirds of a yard cost?

20. What is two thirds of three?

21. If three shillings will buy one bushel of corn, what part of a bushel will one shilling buy? What part of a bushel will two shillings buy?

22. One is what part of three?

Ans. One is the third part of three; or one third of three.

23. Two is what part of three?.

Ans. Two is two times the third part of three; or two thirds of three.\*

24. Three times one are how many times three ?

25. If you can buy a barrel of cider for three dollars, how much can you buy for four dollars? How much for five dollars?

26. How many thirds make a whole one?

27. Five are how many times three?

Ans. Once three and two thirds of three.

28. Six are how many times three?

29. If you can buy a barrel of fish for three dollars. how much can you buy for seven dollars? How much for eight dollars?

30. What do you understand by a third, and by two thirds, of anything?

For the answer, see remark after example 16th.

31. Eight are how many times three?

32. Nine are how many times three?

33. Ten are how many times three?

\* The instructor may use either of these expressions; the for-mer will be most easily understood by the pupil; it would be well, therefore, for the instructor to use the former frequently, though the latter is used for the most part in this treatise.

34. Eleven are how many times three?

35. Twelve are how many times three?

36. If a yard of cloth be worth four dollars, and it be cut into four equal parts, what will one of the parts be worth? that is, what is one fourth of it worth? What are two fourths of it worth? What are three fourths of it worth?

37. If you can buy a barrel of cider for four dollars, how much can you buy for one dollar? How much for two dollars? How much for three dollars?

38. What part of four is one?

Ans. One is the fourth part of four.

39. What part of four is two?

Ans. Two fourths of four.

40. What part of four is three?

Ans. Three fourths of four.

41. How many fourths make a whole one?

42. If you can buy a bushel of corn for four shillings, how much can you buy for five shillings? How much for six shillings? I ow much for seven shillings?

43. Five are how many times four? Ans. Once four and one fourth of four.

44. Six are how many times four?

Ans. Once four and two fourths of four.

45. Seven are how many times four?

Ans. Once four and three fourths of four.

46. Eight are how many times four?

47. If four bushels of corn will buy one yard of cloth, how many yards will nine bushels buy? How many yards will ten bushels buy? How many yards will eleven bushels buy?

48. What do you understand by one fourth, two fourths, or three fourths of anything?

See remark after example 16th.

49. Ten are how many times four?

50. Eleven are how many times four ?

51. Twelve are how many times four?

52. Thirteen are how many times four?

53. Fourteen are how many times four?

54. Fifteen are how many times four?

55. Sixteen are how many times four?

56. If a barrel of flour be worth five dollars, and it be divided equally among five men, what will one man's share be worth? that is, what is one fifth of *p* barrel worth? What are two fifths of it worth? What are three fifths of it worth? What are four fifths of it worth?

57. If five dollars will buy one box of butter, what part of a box will one dollar buy? What part will two dollars buy? What part will three dollars buy? What part will four dollars buy?

58. What part of five is one?

Ans. One is the fifth part of five.

59. Two is what part of five?

Ans. Two fifths of five.

60. Three is what part of five?

Ans. Three fifths of five.

61. Four is what part of five?

62. How many fifths make a whole one?

63. If cherries are five cents a quart, how many quarts can you buy for six cents? How many for seven cents? How many for eight cents? How many for nine cents? How many for eleven cents? How many for thirteen cents?

64. What do you understand by one fifth, two fifths &c. of anything?

See remark after example 16th.

65. Seven are how many times five?Ans. Once five and two fifths of five?66. Eight are how many times five?67. Nine are how many times five?68. Ten are how many times five?

69. Eleven are how many times five ?.

70. 'Twelve are how many times five?

71. Thirteen are how many times five ?

72. Fourteen are how many times five ?

73. Fifteen are how many times five?

74. If a barrel of beef cost six dollars, and it were divided into six equal parts, what would one of the parts be worth? that is, what is one sixth of it worth? What are two sixths of it worth? What are three sixths of it worth? Four sixths? Five sixths?

75. If fish is worth six dollars a barrel, what part of a barrel will one dollar buy? What part of a barrel will two dollars buy? Three dollars? Four dollars? Five dollars?

76. What part of six is one?

Ans. One is the sixth part of six.

77. What part of six is two?

Ans. Two sixths of six.

78. Three is what part of six?

Ans. Three sixths of six.

79. Four is what part of six?

80. How many sixths make a whole one?

81. How much rye at six shillings a bushel can you buy for seven shillings? How much for eight shillings? Nine shillings? Ten shillings? Eleven shillings? Twelve shillings? Thirteen shillings? Fifteen shil-. lings? Seventeen shillings?

82. What do you understand by one sixth, two sixths, &c. .

83. Eight are how many times six?

Ans. One time six and two sixths of six.

84. Nine are how many times six?

85. Ten are how many times six?

86. Eleven are how many times six ?87. Twelve are how many times six ?

88. Thirteen are how many times six?

89. Fourteen are how many times six?

90. Fifteen are how many times six?

91. If coal is worth seven dollars a chaldron, what is one seventh of a chaldron worth? What are two sevenths of a chaldron worth? Three sevenths? Four sevenths? Five sevenths? Six sevenths?

92. At the rate of seven dollars a yard, how much broadcloth can you buy for one dollar? How much for two dollars? How much for three dollars? How much for four dollars? How much for five dollars? How much for six dollars? How much for eight dollars? How much for ten dollars? How much for twelve dollars? How much for fifteen dollars?

93. What part of seven is one?Ans. One is one seventh of seven.94. What part of seven is two?

Ans. Two sevenths of seven.

95. What part of seven is three?

96. Four is what part of seven?

97. Five is what part of seven?

98. What do you understand by one seventh, two sevenths, &c. of anything?

99. How many sevenths make a whole one?

100. Nine are how many times seven?

101. Ten are how many times seven?

102. Eleven are how many times seven?

103. Twelve are how many times seven?

104. Thirteen are how many times seven?

105. Fourteen are how many times seven?

106. Fifteen are how many times seven?

107. Sixteen are how many times seven?

108. When wheat is eight shillings a bushel, what is one eighth of a bushel worth? What are two eighths of a bushel worth? What are three eighths of a bushel worth? What are four eighths of a bushel worth? Five eighths? Six eighths? Seven eighths?

109. When wood is eight dollars a cord, what part of a cord can you buy for a dollar? What part of a cord can you buy for two dollars? What part for

three dollars? What part for four dollars? What part for five dollars? What part for six dollars? What part for seven dollars? How much can you buy for nine dollars? How much for ten dollars? How much for eleven dollars? How much for thirteen dollars? How much for fifteen dollars? How much for nineteen dollars?

110. What part of eight is one?

111. What part of eight is two?

112. Three is what part of eight?

113. Four is what part of eight? 114. Five is what part of eight?

115. What do you understand by one eighth, two eighths, &c. of any number?

116. Seven is what part of eight?

117. How many eighths make a whole one?

118. Ten are how many times eight?

119. Eleven are how many times eight?120. Twelve are how many times eight?

121. Thirteen are how many times eight?

122. Fourteen are how many times eight?

123. When sugar is nine dollars a hundred-weight, what is one ninth of a hundred-weight worth? What are two ninths of a hundred-weight worth? Three ninths? Four ninths? Five ninths? Six ninths? Seven ninths? Eight ninths?

124. When rye is nine shillings a bushel, what part of a bushel can you buy for one shilling? What part for two shillings? What part for three shillings? For four shillings? For five shillings? For six shillings? Seven shillings ? Eight shillings ? How much for ten shillings? For thirteen shillings? For fourteen shillings? Sixteen shillings? Twenty shillings? 125. What do you understand by one ninth, twc

pinths, three ninths, &c. of any number?

126. Three is what part of nine?

127. Four is what part of nine?

128. Five is what part of nine?

129. Seven is what part of nine?

130. How many ninths make a whole one?

131. Thirteen are how many times nine?

132. Fifteen are how many times nine?

133. Seventeen are how many times nine?

134. When hay is ten dollars a ton, what is one tenth of a ton worth? What are two tenths of a ton worth? What are three tenths of a ton worth? Four tenths? Five tenths? Six tenths? Seven tenths? Eight tenths? Nine tenths?

135. When sugar is ten dollars a hundred-weight, what part of a hundred-weight can you buy for one dollar? What part for two dollars? What part for three dollars? What part for four dollars? What part for five dollars? Six dollars? Seven dollars? Eight dollars? Nine dollars? How much can you buy for eleven dollars? Thirteen dollars? Fifteen dollars? Seventeen dollars?

136. What do you understand by one tenth, two tenths, three tenths, &c. of anything?\*

137. How many tenths make a whole one?\*

C. Instead of writing the names of numbers, it is usual to express them by particular characters, called *figures*.

One is written.	-		-		-	-	-	-	1
Two is written	- 1		-	-	-	-	-		2
Three is written	-			-	-	1		•	3
Four is written	-	-	-	-		-	-	-	4
Five is written		-	-	-	-	-		-	5
Six is written	-	-	-	-	-	-	-	-	6
Seven is written	-							-	7
Eight is written	-	-	-	-	-		-	-	8
Nine is written	-	-	-		-	-	-	-	9
Ten is written	_	-	-	-	-		-	-	10

\* These questions should frequently be put to the pupils.

1. Eleven times one are how many times 2?

2. Twelve are how many times 2? 3? 4?

3. Fourteen are how many times 2? 4? 3?

4. If you had fifteen cents, how many cakes could you buy at 4 cents apiece? How many at 2 cents apiece? How many at 3 cents apiece? How many at 5 cents apiece ?

5. Fifteen are how many times 4? 2? 3? 5?

6. Sixteen are how many times 5? 3? 6? 2? 7?4?

7. Seventeen are how many times 6? 2? 7? 3? 5? 4?

8. Eighteen are how many times 4? 7? 9? 6? 3? 2? 5? 8?

9. Nineteen are how many times 3? 7? 4? 5? 8? 6? 9? 2? 10? 10. Twenty are how many times 6? 2? 8? 3?

9? 4? 10? 5? 7?

11. Twenty-one are how many times 7? 3? 8? 2? 4? 6? 9? 5? 10?

12. Twenty-two are how many times 3? 8? 5? 4? 9? 6? 7? 10? 2?

13. If you had twenty-seven dollars, how much cloth could you buy at 9 dollars a yard? How much at 6 dollars a yard? How much at 4 dollars a yard? How much at 3 dollars a yard? How much at 7 dollars a yard? How much at 8 dollars a yard? How much at 5 dollars a yard? How much at 10 dollars a yard?

14. 'Twenty-seven are how many times 9? 6? 4?

3? 7? 8? 5? 10?
15. Twenty-four are how many times 6? 8? 7? 5? 2? 10? 3? 4? 9?

16. Twenty-nine are how many times 3? 7? 5? 9? 6? 8? 4? 10?

17. Twenty-three are how many times 4? 2? 7? 8? 3? 9? 6? 5? 10?

18. Twenty-five are how many times 3? 7? 2?
6? 9? 4? 8? 5? 10?
19. Thirty are how many times 10? 2? 3? 7?
9? 6? 5? 4? 8?
20. Thirty-three are how many times 6? 8? 7?
4? 9? 5? 10? 3?
21. Twenty-six are how many times 9? 4? 7? 3?
8? 5? 6? 10?
22. Thirty-five are how many times 5? 6? 3?
7? 9? 10? 4? 8?
23. Thirty-eight are how many times 8? 6? 3?
9? 5? 4? 7? 10?
24. Thirty-four are how many times 7? 3? 9?
10? 6? 8? 4? 5?
25. Thirty-six are how many times 8? 9? 4? 5?
3? 6? 7? 10?
26. Forty are how many times 8? 10? 6? 4? 3?
9? 5? 7?

D. 1. If an orange is worth 3 apples, how many oranges are fifteen apples worth?

2. In 8 pints how many quarts?

3. In 8 gills how many pints?

4. If you divide twelve apples equally among three oys, how many would you give them apiece?

5. How many hours would it take you to travel 10 miles, if you travel three miles in an hour?

6. How many pence are there in eight farthings?

7. How many pence are there in twelve farthings ?

8. How many pence are there in seventeen farthings? 9. How many gallons are there in ten quarts?

10. How much broadcloth, at 6 dollars a yard, can you buy for seventeen dollars?

11. How many pounds of raisins, at 8 cents a pound, can you buy for twenty-five cents?

12. In twenty-eight shillings, how many dollars?

13. In twenty-eight farthings, how many pence?

14. How many barrels of flour, at 7 dollars a barrel, can you buy for thirty-four dollars?

15. How many reams of paper, at five dollars a ream, can you buy for thirty-seven dollars?

16. In thirty-four gills, how many pints?

17. In twenty-seven quarts, how many gallons?

18. If an orange is worth six apples, how many oranges can you buy for forty apples?

19. Thirty-six shillings are how many dollars?

20. A man bought thirty apples at the rate of 3 for a cent, how many cents did they come to?

21. A laborer engaged to work 8 months for ninety-six dollars; how much did he receive for a month? how much a week, allowing 4 weeks to the month? how many shillings a day, allowing 6 working-days to the week?

22. If wine is worth twenty cents a pint, what is 1 gill worth?

23. If you can buy a bushel \* of apples for forty cents, what is the price of a peck?

24. If you buy a bushel of pears for forty-eight cents, what will be the price of half a peck, at the same rate?

25. Four men bought a horse for forty-eight dollars? what did each man pay?

26. Five men bought a horse for seventy-five dollars, and sold him again for forty dollars; what did each man lose by the bargain?

27. A man gave sixty-three cents for a horse to ride nine miles; what was the price of one mile's ride?

28. A man hired a horse to ride, and agreed to give 8 cents a mile; he paid fifty-six cents; how many miles did he ride?

29. A man had forty-two dollars, which he paid for wood at 7 dollars a cord; how many cords did he buy?

30. Two boys are forty-eight rods apart, and both running the same way; but the hindermost boy gains upon the other 3 rods in a minute; in how many minutes will be overtake the foremost boy?

31. There is a vessel containing sixty-three gallons of wine; it has a pipe which discharges 7 gallons in an hour; how many hours will it take to empty the vessel?

32. There is a vessel containing eighty-seven gallons, and by a pipe ten gallons will run into it in an hour; in how many hours will the vessel be filled?

33. If one man can do a piece of work in thirty days, in how many days can 3 men do it? in how many days can 5 men do it?

34. If you wish to put sixty-four pounds of butter into 8 boxes, how many pounds would you put into each box?

35. If you had seventy-two pounds of butter, which you wished to put into boxes containing 8 pounds each, how many boxes would it take.

36. If a man can perform a journey in thirty-six hours, how many days will it take him to do it when the days are nine hours long?

37. If a man can do a piece of work in forty-eight hours, how many days would it take him to do it, if he works twelve hours in a day?

# SECTION IV.

A. 1. At two cents a yard, what will 3 yards and one half of a yard of tape cost?

2. 3 times 2, and one half of 2 are how many?

3. At three dollars a yard, what will 4 yards and one third of a yard of cloth cost?

4. 4 times 3, and one third of 3 are how many?

5. At 3 dollars a barrel, what will 3 barrels and 2 thirds of a barrel of cider cost?

6. 3 times 3, and two thirds of 3 are how many?

7. If a man earn 4 dollars in a week, how many dollars will he earn in 3 weeks and 1 fourth of a week?

8. 3 times 4, and 1 fourth of 4 are how many?

9. If a yard of cloth cost 4 dollars, what will 5 yards and 3 fourths of a yard cost?

10. 5 times 4, and 3 fourths of 4 are how many?

11. If a man spend five dollars in a week, how many dollars will he spend in 3 weeks and 1 fifth of a week? How much in 5 weeks and 2 fifths of a week?

12. 3 times 5, and 1 fifth of 5 are how many?

13. 5 times 5, and 2 fifths of 5 are how many?

14. 6 times 5, and 3 fifths of 5 are how many?

15. If beer is worth six dollars a barrel, what would 4 barrels and 1 sixth of a barrel cost? How much would 7 barrels and 5 sixths of a barrel cost?

16. 4 times 6, and 1 sixth of six are how many?

17. 7 times 6, and 5 sixths of six are how many?

18. At 7 dollars a barrel, what will 3 barrels and 1 seventh of a barrel of flour cost? What will 5 barrels and 2 sevenths of a barrel cost?

19. 3 times 7, and 1 seventh of 7 are how many?20. 5 times 7, and 2 sevenths of 7 are how many?21. 8 times 5, and 4 fifths of 5 are how many?

22. 8 times 6, and 3 sixths of 6 are how many?

23. At 8 dollars a yard, what will 4 yards and 1 eighth of a yard of broadcloth cost?

24. 4 times 8, and 1 eighth of 8 are how many? 25. 2 times 7, and 3 sevenths of 7 are how many? 26. 8 times 7, and 4 sevenths of 7 are how many? 27. 9 times 7, and 6 sevenths of 7 are how many? 28. 3 times 8, and 5 eighths of 8 are how many? 29. 9 times 8, and 7 eighths of 8 are how many? 30. If a hundred-weight of sugar cost 9 dollars, what will 2 hundred-weight and 1 ninth of a hundredweight cost? What will 5 hundred-weight and 2 ninths of a hundred-weight cost?

31. 2 times 9, and 1 ninth of 9 are how many?
32. 5 times 9, and 2 ninths of 9 are how many?
33. 6 times 9, and 4 ninths of 9 are how many?
34. 2 times 10, and 3 tenths of 10 are how many?
35. 7 times 9, and 7 ninths of 9 are how many?
36. 5 times 10, and 4 tenths of 10 are how many?
37. 8 times 9, and 5 ninths of 9 are how many?
38. 4 times 10, and 7 tenths of 10 are how many?
39. 6 times 10, and 9 tenths of 10 are how many?

B. 1. A man bought 2 oranges at 6 cents apiece; how many cents did they come to? He paid for them with cherries at 4 cents a pint; how many pints did it take?

2. 2 times 6 are how many times 4?

3. A man bought 3 yards of cloth at 4 dollars a yard; how many dollars did it come to? How much flour at 6 dollars a barrel would it take to pay for it?

4. 3 times 4 are how many times 6?

5. A man bought 4 peaches at 3 cents apiece; how many cents did they come to? He paid for them with pears at 2 cents apiece; how many pears did it take?

6. 4 times 3 are how many times 2?

Sect. 4.]

7. Bought 2 hundred-weight of sugar, at 9 dollars a hundred-weight, and paid for it with wood at 6 dollars a cord; how many cords did it take?

8. 2 times 9 are how many times 6?

9. Bought 3 barrels of flour at 8 dollars a barrel, and paid for it with cider at 4 dollars a barrel; how many barrels did it take?

10. 3 times 8 are how many times 4?

11. 12 times 3 are how many times 5?

12. 6 times 4 are how many times 8?

13. 3 times 10 are how many times 6?

14. 4 times 9 are how many times 6?

15. How much flannel worth 4 shillings a yard must be given for 3 yards of silk worth 5 shillings a yard?

16. 3 times 5 are how many times 4?

17. 2 times 7 are how many times 3? 5? 4?

18. 4 times 5 are how many times 3? 6? 7?

19. 3 times 7 are how many times 4? 5? 6? 8? 9?

20. Bought 2 kegs and 2 sevenths of a keg of tobacco at 7 dollars a keg, and paid for it with wood at 4 dollars a cord; how many cords did it take? How much butter at 3 dollars a box would it take to pay for it?

21. 2 times 7, and 2 sevenths of 7 are how many times 4? 3? 5? 6? 8?

22. Bought 3 bushels and 3 fifths of a bushel of corn at 5 shillings a bushel, and paid for it with wheat at 6 shillings a bushel; how many bushels of wheat did it take?

23. 3 times 5, and 3 fifths of five are how many times 6? 9? 4? 7? 3? 8?

24. How much sugar that is 8 dollars a hundredweight, can be bought for 4 cords and 2 sevenths of a cord of wood, at 7 dollars a cord? 25. 4 times 7, and 2 sevenths of 7 are how many times 6? 8? 5? 3? 9? 10?

26. 5 times 5, and 3 fifths of 5 are how many times 4? 8? 9? 7? 10? 3? 6?

27. 6 times 7, and 3 sevenths of 7 are how many times 9? 4? 5? 8? 10?

28. 5 times 8, and 3 eighths of 8 are how many times 6? 9? 4? 7? 10?

29. 7 times 8, and 5 eighths of 8 are how many times 9? 6? 10? 4? 5?

30. 5 times 9, and 4 ninths of 9 are how many times 7? 8? 6? 10? 4?

31. 7 times 9, and 7 ninths of 9 are how many times 6? 8? 10? 5? 4?

32. 6 times 10, and 3 tenths of 10 are how many times 7? 5? 4? 9? 8?

33. 8 times 10, and 4 tenths of 10 are how many times 6? 7? 9?

34. 8 times 9, and 3 ninths of 9 are how many times 6? 10? 7?

C. 1. Bought 4 bushels of apples, at 3 shillings a bushel; how many dollars did they come to?

2. How many apples, at 2 cents apiece, must you give for 2 lemons at 4 cents apiece ?

3. How many pears, at 3 cents apiece, must you give for 3 oranges at 5 cents apiece?

4. How many barrels of cider, at 3 dollars a barrel, must be given for 5 boxes of butter, at 4 dollars a box?

5. A man bought 4 yards of broadcloth, at 7 dollars a yard, and paid for it with flour, at 5 dollars a barrel; how many barrels did he give?

6. If 2 apples cost 4 cents, what would 4 apples cost?

7. If 3 apples are worth 6 cents, how many apples

#### Sect. 4.]

must you give for 8 pears, that are worth 3 cents apiece?

8. James had 8 oranges that were worth 5 cents apiece, and George had 5 quarts of cherries that were worth 6 cents a quart, which he gave to James for a part of his oranges; how many oranges did he buy, and how many had James left?

9. Bought 8 yards of cloth, at 9 shillings a yard how many dollars did it come to?

10. Bought 5 bushels and 3 sevenths of a bushel of salt, at 7 shillings a bushel; how many dollars did it come to?

11. Bought 9 boxes and 2 thirds of a box of raisins for 3 dollars a box, and paid for it with cider at 4 dollars a barrel; how many barrels did it take?

12. Bought 8 pounds and 4 sevenths of a pound of opium at 7 dollars a pound, and paid for it with cloth at 5 dollars a yard; how many yards did it take?

13. Bought 6 chaldrons and 4 ninths of a chaldron of coal at 9 dollars a chaldron, and paid for it with oranges at 5 dollars a box; how many boxes did it take?

14. Bought 7 cases and 5 sixths of a case of Florence oil at 6 dollars a case, and paid for it with sheetlead at 7 dollars a hundred-weight; how many hundred-weight did it take?

15. How many dozen of eggs, at 8 cents a dozen, must you give for 7 pounds of sugar, at 10 cents a pound?

16. How much barley, at 3 shillings a bushel, must be given for 8 bushels of wheat, at 7 shillings a bushel?

17. How much cloth, at 4 shillings a yard, must be given for a firkin of butter worth 8 dollars?

18. How much cloth, at 5 shillings a yard, can be bought for 2 reams of paper, at 5 dollars a ream?

19. How much wheat, at 7 shillings a bushel, can be bought for 2 barrels of cider, at 4 dollars and a half a barrel?

20. How long would it take a man to lay up 10 dollars, if he saves 4 shillings a day?

21. If a man earns 8 shillings a day, how many dollars would he earn in 10 days?

22. A man bought twenty pears at the rate of 2 for 3 cents; how much did they come to?

23. How many eggs, at the rate of 3 for 5 cents, can you buy for thirty cents?

24. A man hired a laborer and agreed to give him 5 dollars for every 3 days' work; how much did he give him a week, there being 6 working days in a week? How much was it a month, allowing 4 weeks to the month?

25. If a man receives 5 dollars for 3 days' work, how many shillings is that a day?

26. 5 men bought a horse for sixty-three dollars, and paid two dollars a week for keeping him; at the end of 8 weeks they sold him for fifty-four dollars; how much did each man lose by the bargain?

# SECTION V.

A. 1. JAMES had 4 apples, and John had half as many; how many had he?

2. If an orange cost 6 cents, and an apple half **as** much; how much does the apple cost?

3. If you divide 8 apples equally between two boys, what part of them must each have ?

Ans. One half of them.

4. What is 1 half of 8?

5. If you divide 8 apples equally among 4 boys what part of them must each have?

Ans. One fourth of them,
6. What is 1 fourth of 8?

7. If you divide 6 oranges equally among 3 boys, what part of them must 1 boy have?

8. What is 1 third of 6.

9. If 4 yards of cloth cost 8 dollars, what part of 8 dollars would 1 yard cost? What part of 8 dollars would 2 yards cost? What part of 8 dollars would 3 yards cost?

10. What is 1 fourth of 8? What is 2 fourths of 8? What is 3 fourths of 8?

11. If 6 yards of cloth will make 3 coats, what part of 6 yards will make 1 coat? What part of 6 yards will make 2 coats?

12. What is one third of 6? What is two thirds of 6?

13. If 3 barrels of cider cost 9 dollars, what part of 9 dollars will 1 barrel cost? What part of 9 dollars will 2 barrels cost?

14. What is 1 third of 9? What is 2 thirds of 9?

15. If 2 yards of cloth cost 10 dollars, what part of 10 dollars will 1 yard cost? What part of 10 dollars will 3 yards cost?

16. What is 1 half of 10? What is 3 halves of 10?

17. If 2 barrels of flour cost twelve dollars, what part of twelve dollars will 1 barrel cost? What part of twelve dollars will 3 barrels cost? What part of twelve dollars will 5 barrels cost?

18. What is 1 half of twelve? What is 3 halves of 12? What is 5 halves of twelve?

19. If 4 barrels of cider cost twelve dollars, what part of twelve dollars will 1 barrel cost? What part of twelve dollars will 3 barrels cost? What part of twelve dollars will 5 barrels cost? What part of twelve dollars will 7 barrels cost?

20. What is 1 fourth of twelve? What is 2 fourths pf twelve? 3 fourths? 5 fourths? 7 fourths?

21. If 3 oranges cost twelve cents, what part of

twelve cents will 1 orange cost? What part of twelve cents will 2 oranges cost? What part of twelve cents will 4 oranges cost? What part of twelve cents will 5 oranges cost? 7 oranges? 10 oranges?

22. What is 1 third of twelve? 2 thirds? 4 thirds? 5 thirds? 7 thirds? 10 thirds?

23. If 5 bushels of wheat cost 10 dollars, what part of 10 dollars will 1 bushel cost? What part of 10 dollars will 2 bushels cost? 3 bushels? 4 bushels? 6 bushels? 7 bushels?

24. What is 1 fifth of 10? 2 fifths? 3 fifths? 4 fifths? 6 fifths? 7 fifths?

25. What is 1 half of fourteen? 1 seventh? 2 sevenths? 3 sevenths? 5 sevenths?

26. What is 1 third of fifteen? 2 thirds? 1 fifth? 2 fifths? 3 fifths? 4 fifths?

27. What is 1 half of sixteen ? 3 fourths ? 1 eighth ? 3 eighths ? 5 eighths ? 7 eighths ? 1 sixteenth ?

28. What is 1 half of eighteen? 2 thirds? 1 sixth?
5 sixths? 1 ninth? 2 ninths? 4 ninths? 5 ninths?
7 ninths? 8 ninths? 1 eighteenth? 5 eighteenths?

29. What is 1 half of twenty? 1 fourth? 3 fourths?
1 fifth? 3 fifths? 2 fifths? 4 fifths? 1 twentieth?
8 twentieths? 7 twentieths?

30. What is 1 third of twenty-one? 2 thirds? 1 seventh? 5 sevenths? 3 sevenths? 6 sevenths? 4 sevenths?

31. What is 1 half of twenty-two? 1 eleventh? 3 elevenths? 5 elevenths? 7 elevenths? 10 elevenths?

32. What is 1 half of twenty-four? 1 third? 2 thirds? 1 fourth? 3 fourths? 1 sixth? 5 sixths? 5 eighths? 3 eighths? 7 eighths? 1 twelfth? 5 twelfths? 7 twelfths?

33. What is 1 half of twenty-six?

34. What are 2 thirds of twenty-seven? 2 ninths? 4 ninths? 5 ninths? 8 ninths? 7 ninths?

### Sect. 5.]

35. What is 1 half of twenty-eight? 3 fourths? 2 sevenths? 5 sevenths? 3 sevenths?

36. What is 1 sixth of thirty? 3 fifths? 7 tenths? 2 thirds? 1 half?

37. What is 1 half of thirty-two? 3 fourths? 5 eighths? 1 sixteenth?

38. What is 1 half of thirty-four?

39. What is 5 sixths of thirty-six? 2 thirds? 1 half? 7 twelfths? 4 ninths? 3 fourths?

40. What is 1 half of thirty-eight?

41. What is 1 third of thirty-nine?

42. What is 3 fourths of forty? 7 eighths? 9 tenths? 1 half?

43. What is 3 sevenths of forty-two? 5 sixths?

B. 1. A boy having twelve apples, kept 1 fourth of them himself, and divided the other 3 fourths of them equally among 4 of his companions, how many did he give them apiece?

2. 3 fourths of twelve are how many times 4?

3. A man having fourteen bushels of grain, divided 5 sevenths of it equally among 3 men; how much did he give them apiece?

4. 5 sevenths of fourteen are how many times 3?

5. A man having fifteen shillings, gave away 4 fifths of it, how many dollars did he give away?

6. 4 fifths of fifteen are how many times 6?

7. A man having twenty-one cents, paid away 6 sevenths of them for oranges at 5 cents apiece; how many oranges did he buy?

8. 6 sevenths of twenty-one are how many times 5?

9. A man bought a piece of cloth for twenty-four shillings; and sold it again for 5 thirds of what he gave for it; how many dollars did he sell it for?

10. 5 thirds of twenty-four are how many times 6? 11. 7 fitths of twenty are how many times 6?

[Part 1.

12 5 sevenths of thirty-five are how many times
8?
13. 7 sixths of thirty-six are how many times 5?

14. 9 sevenths of forty-two are how many times 8?

15. 7 ninths of forty-five are how many times 6?

16. 5 sixths of forty-eight are how many times 7?

17. 6 fifths of fifty are how many times 9?

18. 8 ninths of fifty-four are how many times 5?

19. 9 sevenths of fifty-six are how many times 10?

20. 7 sixths of sixty are how many times 8?

21. 9 sevenths of sixty-three are how many times 7?

22. 10 eighths of sixty-four are how many times 9?

23. 6 eighths of seventy-two are how many times 7?

24. 4 sevenths of eighty-four are how many times 9?

25. 7 tenths of ninety are how many times 8?

C. 1. Charles had 6 apples, and gave 1 third of them to John; how many did he give him?

2. Albert had 9 cents, and spent 2 thirds of them; how many had he left?

3. James had 10 pears, and gave 1 half of them to one of his companions, and 2 fifths of them to another; how many did he give away?

4. If 3 yards of cloth cost 6 dollars, what is that a yard?

5. If 4 yards of cloth cost twelve dollars, what will 2 yards cost?

6. If 9 apples cost eighteen cents, what will apples cost?

7. If 3 oranges cost 18 cents, what will 2 cost?

8. James had twenty-five cents, and he gave 4 fifths of them for 10 apples; how much did he give for all the apples? how much apiece?

9. A man had thirty dollars, and gave 5 sixths of

72

### Seci. 5.]

#### ARITHMETIC.

them for 8 yards of cloth; how much did he give a yard?

10. A man had forty yards of cloth, and sold 3 fifths of it for twenty-four dollars; what was that a yard?

11. A man had forty-two barrels of flour, and sold 2 sevenths of it for 6 dollars a barrel; how much did it come to?

12. A boy had sixty-three nuts, and divided 4 sevenths of them equally among six of his companions how many did he give them apiece?

13. If 4 yards of cloth cost twelve dollars, wha will 3 yards cost?

14. If 5 oranges cost twenty-five cents, what will 3 cost?

15. If 3 oranges cost fifteen cents, what will 7 cost?

16. If 3 barrels of cider cost twelve dollars, what will 10 barrels cost?

17. If 7 pounds of flour cost thirty-five cents, what will 9 pounds cost?

18. If 5 firkins of butter cost forty dollars, what will 3 firkins cost?

19. If 2 men can do a piece of work in six days, how long would it take 4 men to do the same work?

20. If 6 men can do a piece of work in twelve days, in how many days will 3 men do the same work?

21. If 3 men can do a piece of work in twelve days, in how many days will 4 men do the same work?

22. If 2 pipes of a certain size will empty a cistern in 6 hours, in how long a time will 3 pipes of the same size empty it?

23. Three men, setting out on a journey, purchased 5 loaves of bread apiece, but before they had eaten any of it, two other men joined them, and they agreed to share the bread equally among the whole; how many loaves did they have apiece?

24. If 4 barrels of flour cost twenty-four dollars what would 7 barrels cost? How much cider at 3 dollars a barrel would 7 barrels of flour buy?

25. A man bought a quantity of flour for fifty-four dollars; and another man gave him 9 yards of cloth for 5 sixths of it; what was the cloth worth a yard?

26. If 9 yards of cloth cost fifty-four dollars; how many boxes of butter, at 4 dollars a box, would 5 yards of the same cloth buy?

27. Bought 8 firkins of butter for seventy-two dollars, and gave 6 of them for 7 yards of cloth; what was a yard of the cloth worth?

28. A man bought 6 barrels of flour for sixty dollars, and gave 4 barrels of it for cider at 5 dollars a barrel; how many barrels did he buy?

Note. The manner of writing numbers with figures has been explained as far as ten. The numbers from ten to one hundred are written as follows:

Ten is written	-	10
Eleven	-	11
Twelve	-	12
Thirteen	-	13
Fourteen	-	14
Fifteen	-	15
Sixteen	-	16
Seventeen	-	17
Eighteen	-	18
Nineteen	-	19
Twenty	-	20
Twenty-one	-	21
Twenty-two	- /	22
Twenty-three	-	23
Twenty-four	-	24
Twenty-five	-	25
Twenty-six	1.0	26
Twenty-seven	-	27

# SECTION VI.

A. 1. BOUGHT 1 half of a yard of cloth for 1 shilling, what would be the price of a yard at the same rate?

2. If 1 half pint of cherries cost 2 cents, what will a pint cost?

3. If 1 fourth of a barrel of flour cost two dollars, what would a barrel cost?

4. 2 is 1 half of what number? 1 fourth of what number?

5. If 1 third of a yard of cloth cost 2 dollars, what is that a yard?

6. 2 is 1 third of what number?

7. If 1 third of a yard of cloth cost 3 dollars, what is that a yard?

8. 3 is 1 third of what number?

9. If 1 fourth of a firkin of butter cost 3 dollars, what is that a firkin?

10. 3 is 1 fourth of what number?

11. A man bought 1 third of a bushel of wheat for **4** shillings, what would a bushel cost at that rate?

12. 4 is 1 third of what number?

13. If a man can ride 2 miles in 1 fifth of an hour, how far can he ride in an hour?

14. 2 is 1 fifth of what number?

15. A man, being asked the age of his eldest son, answered that his youngest son, who was 3 years old, was just 1 fifth of the age of his eldest son; how old was the eldest son?

16. 3 is 1 fifth of what number?

17. A man bought 1 sixth part of a hundred-weight of sugar for 2 dollars, what would a hundred-weight cost at the same rate?

18. 2 is 1 sixth of what number?

19. Bought 1 fifth of a pound of starch for 5 cents, what was that a pound?

20. 5 is 1 fifth of what number?

21. Bought 1 fourth of a pound of aquafortis for 6 cents, what was that a pound?

22. 6 is 1 fourth of what number?

23. Bought 1 seventh of a hundred-weight of cocoa for 4 dollars, what would 1 hundred-weight cost at the same rate?

24. 4 is 1 seventh of what number?

25. 7 is 1 fifth of what number?

26. 5 is 1 third of what number?

27. 4 is 1 eighth of what number?

28. 6 is 1 sixth of what number?

29. 8 is 1 third of what number?

30. 9 is 1 fourth of what number?

31. 7 is 1 sixth of what number?

32. 8 is 1 seventh of what number?

33. 9 is 1 eighth of what number?

34. 8 is 1 tenth of what number?

35. 7 is 1 ninth of what number?

36. 6 is 1 fifth of what number?

37. 10 is 1 seventh of what number?

B. 1. A man bought some linen and some cotton cloth: for the linen he gave 4 shillings a yard, which was twice as much as he gave for the cotton; what did he give a yard for the cotton? 2. 4 is 2 times what number?

3. If 2 thirds of a yard of cloth cost 6 dollars what would 1 third cost?

4. 6 is 2 times what number?

5. If 3 fourths of a barrel of flour cost 6 dollars, what will 1 fourth of a barrel cost?

6. 6 is three times what number?

7. If 2 fifths of a pound of chocolate cost 8 cents, what would 1 fifth of a pound cost?

8. 8 is 2 times what number?

9. If 3 fifths of a pound of candles cost 9 cents, . what will 1 fifth of a pound cost?

10. 9 is 3 times what number?

11. If 2 sevenths of a pound of spermaceti candles cost 10 cents, what will 1 seventh of a pound cost?

12. 10 is 2 times what number?

13. If 5 eighths of a pound of cotton cost 10 cents, what will 1 eighth cost?

14. 10 is 5 times what number?

15. If 2 thirds of a yard of cloth cost 4 dollars, what will 1 third cost? If 1 third of a yard cost 2 dollars, what will a yard cost?\*

16. If 4 is 2 thirds of some number, what is 1 third of the same number ? -2 is 1 third of what number ? \* - Then 4 is 2 thirds of what ?

17. If 2 thirds of a barrel of flour cost 6 dollars, what will 1 third of a barrel cost? If 1 third of a barrel cost? \*

18. If 6 is two thirds of some number, what is 1 third of the same number ? - 3 is 1 third of what number ? - Then 6 is 2 thirds of what ?

19. If 3 fourths of a bushel of wheat cost 6 shillings, what will 1 fourth of a bushel cost? If 1 fourth of a bushel cost 2 shillings, what will a bushel cost?

20. If 6 is 3 fourths of some number, what is 1

\* See this section. article A.

fourth of the same number ? -2 is 1 fourth of what number ? - Then 6 is 3 fourths of what ?

21. If 2 fifths of a gallon of wine cost 4 shillings, what will 1 fifth of a gallon cost? If 1 fifth of a gallon cost 2 shillings, what will a gallon cost?

22. If 4 is 2 fifths of some number, what is 1 fifth of the same number? — 2 is 1 fifth of what number? — Then 4 is 2 fifths of what?

23. If 3 sevenths of a pound of tobacco cost 6 cents, what will 1 seventh of a pound cost? If 1 seventh of a pound cost 2 cents, what will a pound cost?

24. If 6 is 3 sevenths of some number, what is 1 seventh of the same number? -2 is 1 seventh of what number? - Then 6 is 3 sevenths of what?

25. If 2 sevenths of a barrel of fish cost 4 dollars, what will 1 seventh of a barrel cost? What will a barrel cost?

26. 4 is 2 sevenths of what number?

27. If 3 eighths of a pound of chocolate cost 6 cents, what will 1 eighth of a pound cost? What will a pound cost?

28. 6 is 3 eighths of what number?

29. If eight cents will buy 2 fifths of a pound of aquafortis, how many cents will buy a pound?

30. 8 is 2 fifths of what number?

31. A man bought-3 fourths of a hundred-weight of yellow ochre for 9 dollars; what was that a hundred-weight?

32. 9 is 3 fourths of what number?

33. 8 is 4 ninths of what number?

34. 9 is 3 tenths of what number?

35. 10 is 5 sevenths of what number?

36. 12 is 3 fifths of what number?

37. 12 is 4 ninths of what number?

38. 10 is 2 sevenths of what number?

39. 14 is 7 fifths of what number?

40. 15 is 3 elevenths of what number ?
41. 16 is 2 fifths of what number ?
42. 18 is 6 tenths of what number ?
43. 20 is 5 ninths of what number ?
44. 21 is 3 ninths of what number ?
45. 25 is 8 ninths of what number ?

C. 1. If 5 eighths of a cask of claret wine cost 15 dollars, what is that a cask? How much cider at 6 dollars a barrel would it take to pay for a cask of the wine?

2. 15 is 5 eighths of how many times 4?

. 3. If 2 thirds of a pound of coffee cost 18 cents, how much would a pound cost? How many oranges at 5 cents apiece, might be bought for a pound?

4. 18 is 2 thirds of how many times 5?

5. A man bought 4 sevenths of a hundred-weight of sugar for 20 shillings, how many dollars would a hundred-weight come to at the same rate ?

6. 20 is 4 sevenths of how many times 6?

7. A man sold a cow for 21 dollars, which was only 7 tenths of what she cost him; how much did she cost him? When he bought her, he paid for her with cloth at 8 dollars a yard; how many yards of cloth did he give?

8. 21 is 7 tenths of how many times 8?

9. A man, being asked the age of his youngest son, answered, that the age of his eldest son was 24 years, which was 3 fifths of his own age; and that his own age was 10 times as much as that of his youngest son; what was his age? and what was the age of his youngest son?

10. 24 is 3 fifths of how many times 10?
11. 27 is 3 fifths of how many times 7?
12. 28 is 7 tenths of how many times 9?
13. 30 is 5 eighths of how many times 7?
14. 32 is 4 sevenths of how many times 6?

[Part 1

15. 36 is 9 eighths of how many times 5?
16. 40 is 8 ninths of how many times 8?
17. 42 is 6 fifths of how many times 4?
18. 45 is 9 eighths of how many times 6?
19. 48 is 8 ninths of how many times 7?
20. 50 is 5 sevenths of how many times 8?
21. 54 is 9 sixths of how many times 7?
22. 56 is 7 ninths of how many times 10?
23. 60 is 10 sevenths of how many times 5?
24. 63 is 9 eighths of how many times 5?
25. 64 is 8 ninths of how many times 7?
26. 70 is 10 sevenths of how many times 8?
27. 72 is 9 fifths of how many times 6?
28. 80 is 10 thirds of how many times 4?
29. 80 is 8 fifths of how many times 6?

D. 1. A boy gave away 4 cents, which was 1 third of all he had; how many had he at first?

2. A boy gave 5 apples to one of his companions, which was 1 fourth of what he had; how many had he?

3. A man paid away 4 dollars, which was 2 thirds of all the money he had; how much had he?

4. A man sold a watch for 18 dollars, which was 3 fourths of what it cost him; how much did it cost?

5. A man sold a cow for 15 dollars, which was 3 fifths of what the cow cost; how much did he lose by his bargain?

6. A man bought 12 yards of cloth, and sold it for 54 dollars, which was 9 eighths of what it cost him; what did it cost him a yard? and how much did he gain by his bargain?

7. There is a pole standing in the water, so that 10 feet of it is above the water, which is 2 thirds of the whole length of the pole; how long is the pole?

8. There is a pole 2 thirds under water, and 4 feet put; how long is the pole?

9. There is a pole 2 fifths under water, and 6 feet out of the water; how long is the pole?

10. There is an orchard, in which 3 sevenths of the trees bear cherries, and 2 sevenths bear peaches, and 10 trees bear plums; how many trees are there in the orchard? and how many of each sort?

11. There is a school, in which 2 ninths of the boys learn arithmetic, 3 ninths learn grammar, 1 ninth learn geography, 1 ninth learn geometry, and 12 learn to write; how many are there in the school? and how many attending to each study?

12. A man sold a watch for 63 dollars, which was 7 fifths of what it cost him; how much did he gain by the bargain?

### Miscellaneous Examples.

1. IF 1 yard of cloth cost 4 dollars, what will 5 yards cost?

2. A man bought 3 pounds of raisins, at 7 cents a pound, and 16 oranges, at 4 cents apiece, and 1 pound of candles for 16 cents; what did they all come to?

3. A boy had 37 apples; he kept 5 himself, and divided the rest equally among four companions; how many did he give them apiece?

4. Two men are 40 miles apart, and both travelling the same way; the hindermost man gains upon the other 5 miles each day; in how many days will he overtake him?

5. Two men are travelling the same way; one travels at the rate of 38 miles a day, the other, who is behind the former, travels 44 miles; how much does he gain of the first each day? and in how many days would he gain 60 miles?

6. A fox is 80 rods before a greyhound, and is running at the rate of 27 rods in a minute; the grey-

6

hound is following at the rate of 31 rods in a minute; in how many minutes will the greyhound overtake the fox.

7. If 2 yards of cloth cost 6 dollars, what would 4 yards cost? what would 12 yards cost? 8. If 8 sheep cost 24 dollars, what would 3 cost? 9. If 4 tons of hay will keep 3 horses through the

winter, how many tons will keep 30 horses the same time?

10. If a man spends 8 shillings a day, how many dollars will he spend in a week?

11. Bought ten pieces of cloth, each containing 5 yards, for 100 dollars; what was it a piece? and how much a yard?

12. If the wages of 12 weeks come to 60 dollars, what is that a month? and how much for 5 weeks.

13. If 7 horses eat 14 bushels of oats in 1 week. how many bushels would 15 horses eat in the same . time?

14. If 3 horses eat 8 bushels of oats in 2 weeks, how long would it take them to eat 40 bushels?

15. If 1 horse eat 1 bushel of oats in 3 days, in how many days would 4 horses eat 36 bushels?

16. If 2 men spend 12 dollars in 1 week, how many dollars would 3 men, at the same rate, spend in 5 weeks?

17. If a staff 3 feet long cast a shadow of 2 feet at 12 o'clock, what is the length of a pole that casts a shadow 18 feet at the same time of day?

18. If 47 gallons of water, in 1 hour, run into a cistern containing 108 gallons, and by a pipe 38 gallons run out in an hour, how much remains in the cistern in an hour? and in how many hours will the cistern be filled?

19. If 4 men can do a piece of work in 8 days, how many men would it take to do the same work in 4 days?

20. If 6 men can do a piece of work in 9 days, in how many days would 2 men do it?

21. If 8 men can do a piece of work in 5 days, in how many days would they do a piece of work 4 times as large?

22. If 7 men can do a piece of work in 3 days, how many men would it take to do a piece of work 5 times as large in the same time?

23. If 8 men can do a piece of work in 4 days, in how many days would 2 men do a piece of work one half as large?

24. A man bought a cask of wine containing 63 gallons, 3 sevenths of which leaked out; and he sold the remainder for 36 dollars; how much per gallon did he sell it for?

25. If a cask of wine cost 48 dollars, what is 5 eighths of it worth?

26. A man bought 7 oranges for 6 cents apiece, and sold them all for 54 cents, how much did he gain by the bargain?

27. A man bought 8 yards of cloth for 56 dollars, and sold it again for 9 dollars a yard; how much did he gain by the bargain?

28. A man bought 8 barrels of flour for 40 dollars; how much must he sell it at per barrel to gain 16 dollars?

29. A man bought 5 firkins of butter at 7 dollars a firkin; how much must he sell it per firkin to gain 10 dollars?

30. A man gave 35 cents for his breakfast, which was 5 eighths of what he gave for his dinner; what did he give for his dinner?

31. A ship's crew of 6 men have provision for 3 months; how many months would it last 1 man?

32. A ship's crew have provision sufficient to last 1 man 27 months; how long would it last 9 men?

33. A ship's crew have provision sufficient to

last 3 men 10 months; how long would it last 5 men?

34. A man built 40 rods of wall in a certain time, another man can build 9 rods while the first builds 5; how much would he build in the same time?

# SECTION VII.

If the combinations in this section should be found too difficult, they may be omitted until reviewing the book.

A. 1. A MAN being asked the age of his eldest son, answered, that his youngest son was six years old, and that 2 thirds of the youngest son's age was just 1 fifth of the eldest son's age. Required the age of the eldest son.

2. 2 thirds of 6 is 1 fifth of what number?

3. A man, being asked how many sheep he had, said that he had them in two pastures; in one pasture he had eight; and that 3 fourths of these was just 1 third of what he had in the other. How many were there in the other?

4. 3 fourths of 8 is 1 third of what number?

5. Two boys talking of their ages, one said he was 9 years old. Well, said the other, 2 thirds of your age is exactly 3 fourths of my age; now, if you will tell me how old I am, I will give you as many apples as I am years old. What was his age?

6. 2 thirds of 9 is 3 fourths of what number?

7. Two boys counting their money, one said he had ten cents. The other says, 4 fifths of your money is exactly 2 sevenths of mine; now, if you will tell how many I have, I will give you 1 half of them. How many had he?

8. 4 fifths of 10 is 2 sevenths of what number ?

84

### Sect 7.]

ARITHMETIC.

9. 5 sixths of 12 is 2 thirds of what number? 10. 6 sevenths of 14 is 4 ninths of what number? 11. 6 fifths of 15 is 2 thirds of what number? 12. 7 ninths of 18 is 2 fifths of what number? 13. 4 fifths of 20 is 8 sevenths of what number? 14. 8 sevenths of 21 is 6 tenths of what number? 15. 5 sixths of 24 is 10 sevenths of how many times 5? 16. 3 sevenths of 28 is 2 eighths of how many times 7? 17. 4 fifths of 30 is 6 sevenths of how many times 8? 18. 6 eighths of 32 is 8 ninths of how many times 5 ? 19. 4 ninths of 36 is 8 tenths of how many times 6? 20. 3 fourths of 40 is 5 sevenths of how many times 8? 21. 6 ninths of 45 is 3 fifths of how many times 7? 22. 5 sixths of 48 is 10 sevenths of how many times 3? 23. 4 sevenths of 63 is 6 fifths of how many times 82 24. 5 ninths of 72 is 4 sevenths of how many times 9 ? B. 1. 4 fifths of 15 is 6 tenths of how many thirds of 21? 2. 4 thirds of 18 is 8 ninths of how many sevenths of 35? 3. 6 sevenths of 21 is 2 thirds of how many thirds of 24? 4. 5 fourths of 24 is 10 sevenths of how many fifths of 40. 5. 5 eighths of 32 is 2 fifths of how many fifths of 35?

85

#### [Part 1

6. 4 sevenths of 63 is 6 eighths of how many ninths of 45?

7. 3 sevenths of 56 is 4 ninths of how many fourths of 28?

8. 3 eighths of 64 is 6 tenths of how many sixths of 30.

9. 2 eighths of 72 is 3 tenths of how many fittles of 40?

# SECTION VIII.

A. 1. IF you cut an apple into two equal parts, what is one of those parts called ?\*

2. How many halves of an apple will make the whole apple?

3. If you cut an apple into 3 equal parts, what is

\* See Section III., article B, remark before questions 1 and 17

### Sect. 8.]

#### ARITHMETIC

1 of those parts called? what are 2 of the parts called?

4. How many thirds of an apple will make the whole apple?

5. If you cut an apple into 4 equal parts, what is 1 of those parts called? what are 2 of those parts called? what are 3 of them called?

6. How many fourths of an apple make the whole apple?

7. If an apple be cut into 5 equal parts, what is 1 of the parts called? what are 2 of the parts called? what are 3 of the parts called? what are 4 of the parts called?

8. How many fifths of an apple make the whole apple?

9. If an apple be cut into 6 equal parts, what is 1 of the parts called? what are 2 of the parts called? what 3? what 4? what 5?

10. How many sixths of an apple make the whole apple?

11. If an apple be cut into 7 equal parts, what is 1 of the parts called? what are 2 of the parts called? what 3? what 4? what 5? what 6?

Let the instructor ask the pupils the divisions of a unit in this manner as far as the division into 10 parts It would be well to ask them further. Then let him begin again, and suppose an orange instead of an apple. After applying the division to several different things, a line may be drawn on the blackboard and divided. It is well often to require the pupil to make the requisite division of a line on the board.

12. A man had a bushel of corn, and wished to give 1 half of a bushel apiece to some laborers; how many could he give it to?

13. How many halves are there in 1?

89

14. A man divided 2 barrels of flour among his laborers, giving them 1 half of a barrel apiece; how many men did he give it to?

15. How many halves are there in 2?\*

16. In 3 bushels of corn how many half bushels?

17. How many halves are there in 3?

18. A boy divided 4 oranges among his companions, giving them 1 half of an orange apiece; how many boys did he give them to?

19. How many halves are there in 4?

20. A man having some laborers, gave them 1 half a dollar apiece; it took 3 dollars and 1 half a dollar to pay them; how many laborers were there?

21. How many halves are there in 3 and 1 half?

22. How many halves are there in 5?

23. How many halves are there in 7 and 1 half?

24. How can you tell how many halves there are in any number?

Answer. Since there are 2 halves in one, there must be twice as many halves as there are whole ones.

25. If you had 1 orange, and should divide it among your companions, giving them 1 third apiece, how many could you give it to?

26. How many thirds are there in 1?

27. If you cut 2 oranges each into 3 pieces, how many pieces would they make?

28. If you cut 3 oranges into 3 pieces each, how many pieces would they make?

29. If you cut 4 apples each into 3 pieces, how many pieces would they make?

30. How many thirds are there in 2? in 3? in 4? in 5?

31. How can you tell how many thirds there are in any number?

Answer. Since there are 3 thirds in one, there will be 3 times as many thirds as there are whole ones?

\* See the Key

### Sect. 8.]

32. If you had 2 bushels and 1 third of a bushel of corn to give to some poor persons, how many could you give it to if you should give them 1 third of a bushel apiece?

33. How many thirds are there in 2 and 1 third?

34. If a horse can eat 1 third of a bushel of oats in 1 day, how many days would it take him to eat 3 bushels and 2 thirds of a bushel?

35. How many thirds are there in 3 and 2 thirds?

36. If 1 horse can eat 1 third of a bushel of oats in a day, how many horses will it take to eat 5 bushels and 2 thirds of a bushel in the same time?

37. In 5 and 2 thirds how many thirds?

38. In 7 and 1 third how many thirds?

39. If 1 horse will eat 1 fourth of a ton of hay in 1 month, how many horses will eat a ton in the same time? How many will eat 2 tons? How many will eat 3 tons? 4 tons? 5 tons? 6 tons?

40. How many fourths are there in 1? in 2? in 3? in 4? in 5? in 6?

41. How can you tell how many fourths there are in any number?

42. How many fourths are there in 4 and 1 fourth?

43. In 5 tons of hay and 3 fourths of a ton how many fourths of a ton?

44. In 5 and 3 fourths how many fourths?

45. In 7 and 1 fourth how many fourths?

46. In 9 and 3 fourths how many fourths?

47. If a horse eat 1 fifth of a ton of hay in a month, how many horses will eat a ton in the same time? 2 tons? 3 tons? 4 tons? 5 tons?

48. How many fifths are there in 1? in 2? in 3? in 4? in 5? in 7? in 9?

49. How can you tell how many fifths there are in any number?

50. In 2 and 1 fifth how many fifths?

51. In 3 dollars and 2 fifths of a dollar how many fifths of a dollar?

In 78 ninths how many times 1?

# SECTION IX.

A. 1. IF a breakfast for 1 man cost 1 third of a dollar, what would a breakfast for 2 men cost?

2. How much is 2 times 1 third?

3. If it take you 1 third of an hour to travel 1 mile, how long will it take you to travel 3 miles?

4. 'How much is 3 times 1 third?

5. If 1 man can eat 1 third of a pound of meat at a meal, how much can 5 men eat?

6. How much is 7 times 1 third?

7. If 1 man can eat 2 thirds of a pound of meat for dinner, how many thirds of a pound would 3 men eat?

8. How much is 2 times 2 thirds?

9. A man gave to 4 paupers 2 thirds of a dollar apiece, how many thirds of a dollar did he give them ? how many dollars?

10. 5 times 2 thirds are how many thirds? how many times 1?

11. If you give 3 men 1 fourth of a dollar apiece, how many fourths of a dollar will it take?

12. 3 times 1 fourth are how many fourths?

13. If you give 3 men 3 fourths of a bushel of corn apiece, how many fourths of a bushel will it take? how many bushels?

14. 5 times 3 fourths are how many fourths? how many times 1?

15. If 1 horse eat 1 fifth of a bushel of oats in a day, how much will 4 horses eat in the same time?

16. 3 times 1 fifth are how many fifths?

17. If 1 man can earn 3 fifths of a dollar in a day, how much can he earn in 4 days?

18. 7 times 3 fifths are how many fifths ? how many times 1 ?

19. If a family consume 2 sevenths of a barrel of flour in a week, how much would they consume in 5 weeks?

20. 6 times 2 sevenths are how many sevenths? how many times 1?

21. 5 times 3 eighths are how many eighths? how many times 1?

22. How much is 6 times 3 fifths?

23. How much is 7 times 5 sixths?

24. How much is 5 times 4 ninths?

25. How much is 6 times 8 ninths?

26. How much is 7 times 9 tenths?

27. How much is 5 times 7 tenths?

28. How much is 6 times 7 eighths?

29. How much is 9 times 5 eighths?

30. How much is 8 times 5 sevenths?

31. How much is 7 times 5 sixths?

32. How much is 8 times 7 fourths?

33. How much is 7 times 4 fifths?

34. How much is 5 times 3 eighths?

B. 1. If 1 bushel of wheat cost a dolla. and 1 half what will 2 bushels cost?

2. How much is 2 times 1 and 1 half? \*

3. If a barrel of cider cost 2 dollars and a half, what will 3 barrels cost?

4. How much is 4 times 2 and 1 half?

5. If a barrel of beer cost 3 dollars and a half, what will 2 barrels cost?

6. How much is 5 times 3 and 1 half?

7. How much is 6 times 3 and 1 half?

8. If a box of butter cost 2 dollars and 1 third of a dollar, what will 3 boxes cost?

9. How much is 4 times 2 and 1 third?

10. If you give to two persons 3 bushels and a third of a bushel of wheat apiece, how many bushels will it take?

11. How much is 5 times 3 and 1 third?

12. If you give to 4 persons each 2 oranges and 1 fourth of an orange, how many oranges will it take?

13. How much is 5 times 2 and 1 fourth?

14. If it take 3 yards and 2 thirds of a yard of cloth to make a suit of clothes, how many yards will it take to make 2 suits?

15. How much is 4 times 3 and 2 thirds?

16. If a family consume 2 bushels and 2 thirds of a bushel of malt in 1 month, how much will they consume in 3 months?

17. How much is 5 times 2 and 2 thirds?

18. How much is 4 times 3 and 3 fourths?

19. How much is 2 times 3 and 1 fourth?

20. How much is 3 times 3 and 3 fourths?

21. How much is 3 times 5 and 1 fourth?

22. If a horse eat 3 tons and 1 fifth of a ton of hay in a year, how much will 2 horses eat in the same time?

23. How much is 4 times 3 and 1 fifth?

\* This is to be understood 2 times 1 and 2 times 1 half, and to be answered thus: 2 times 1 are 2, and 2 times 1 half are 2 halves or 1, which, added to 2, makes 3.

24. If a man can travel 4 miles and 2 fifths of a mile in one hour, how far will he travel in 3 hours? 25. How much is 5 times 4 and 2 fifths? 26. How much is 3 times 5 and 3 fifths? 27. How much is 4 times 6 and 2 fifths? 28. How much is 3 times 2 and 1 sixth? 29. How much is 2 times 5 and 3 sixths? 30. If a yard of cloth cost 4 dollars and 5 sixths of a dollar, what will 4 yards cost? 31. How much is 7 times 4 and 5 sixths? 32. How much is 2 times 3 and 3 sevenths ? 33. How much is 3 times 4 and 3 sevenths? 34. If a bushel of wheat cost 7 shillings and 3 eighths, what will 5 bushels cost at that rate? 35. How much is 3 times 4 and 5 eighths? 36. How much is 4 times 3 and 7 eighths? 37. A man bought 8 yards of cloth, at 9 dollars and 3 tenths a yard; how much did it come to? 38. How much is 6 times 2 and 2 ninths? 39. How much is 4 times 5 and 3 ninths? 40. A man bought 10 barrels of cider at 3 dollars and 5 sixths a barrel; how much did it come to? 41. How much is 3 times 7 and 2 tenths? 42. What cost 8 barrels of beef at 9 dollars and 3 sevenths a barrel. C. 1. A boy wished to give 5 other boys 1 half pint

of chestnuts apiece; how many pints would it take?

2. A boy wished to give 3 other boys 3 fourths of an orange apiece; how many oranges would it take?

3. A man gave to 10 persons 1 fifth of a bushel of corn apiece; how many bushels did it take?4. A man gave to 7 men 3 fourths of a gallon of

beer apiece; how many gallons of beer did it take?

5. If it take 1 yard and 1 fourth of a yard of cloth to make a pair of pantaloons, how many yards would it take to make 8 pairs?

[Part 1.

6. If a family consume 2 bushels and 3 fifths of a bushel of grain in 1 week, how many bushels would they consume in 4 weeks?

7. If a horse eat 3 bushels and 4 sevenths of a bushel of oats in 1 week, how many bushels would he eat in 8 weeks?

8. If a horse eat 5 loads and 3 eighths of a load of hay in 1 year, how many loads would 6 horses eat?

9. If a man travel 4 miles and 5 ninths in an hour, how many miles would he travel in 8 hours?

10. If in an orchard of 10 trees, each tree bears 8 bushels and 3 sevenths, how many bushels will the whole orchard bear?

11. If a man can build 5 rods and 7 eighths of a rod of wall in 1 day, how many rods can he build in 8 days?

12. If 3 men can build a piece of wall in 4 days and 3 fifths of a day, how many days would it take 1 man to build it?

13. If 1 man can build 7 rods and 2 fifths of wall in a day, how many rods would 10 men build?

14. If 1 man can build 3 rods and 2 ninths of wall in 1 day, how many rods would 3 men build in 4 days?

15. If it take 1 yard and 3 sevenths of a yard of cloth to make 1 pair of pantaloons, and 2 yards and 4 sevenths for a coat; how many yards would it take to make 3 pairs of pantaloons and 3 coats.

# SECTION X.

A. 1. IF a yard of cloth cost 3 dollars, what will 1 half of a yard cost?

2. What is 1 half of 3?\*

\* See Section V., article A

3. If a barrel of beer cost 5 dollars, what will 1 half of a barrel cost?

4. What is 1 half of 5?

5. If 2 barrels of cider cost 7 dollars, what is that a barrel?

6. What is 1 half of 7?

7. What is 1 half of 9?

8. What is 1 half of 11?

9. What is 1 half of 13?

10. What is 1 half of 15?

11. If you divide 1 bushel of wheat equally among 3 persons, what part of a bushel will you give them apiece?

12. If 3 yards of cloth cost 1 dollar, what part of a dollar will 1 yard cost?

13. What is 1 third of 1?

14. How could you divide 2 oranges into 3 equal parts? that is, how can you find 1 third of 2 oranges?\*

15. One third of 2 oranges will be the same as how many thirds of 1 orange?

16. If you divide 2 bushels of wheat equally among 3 persons, what part of a bushel will you give them apiece?

17. If 3 bushels of corn cost 2 dollars, what part of a dollar will 1 bushel cost?

NOTE. One third of two things is twice as much as one third of one thing. One third of one is one third, and consequently one third of two things is two thirds. In the same manner, one third of four things is four thirds of one thing. If four oranges be cut each into three parts, and then one part of each be taken, it will make four pieces, each of which is one third of one

\* Divide each orange into three parts, and then take one part from each.

[Part 1.

orange. Hence one third of four oranges is four thirds of one orange, that is, one whole one and one third.

18. If 3 bushels of wheat cost 4 dollars, how much is that a bushel?

19. What is one third of 2? of 4?

20. If 3 gallons of wine cost 5 dollars, what is that a gallon?

21. What is 1 third of 5? of 7? of 8? of 10? of 11.

22. If a bushel of apples be divided equally among 4 persons, what part of a bushel will they have apiece? What would they have apiece, if 2 bushels were divided among them? What if 3 bushels? What if 5 bushels? What if 6 bushels?

23. What is 1 fourth of 1? of 2? of 3? of 5? of 6? of 7? of 9? of 10?

24. If a bushel of malt will serve 5 persons 1 month, how much will serve 1 person the same time?

25. If 2 barrels of eider will serve 5 persons 1 month, how much will serve 1 person the same time.

26. If 3 barrels of flour be divided among 5 men, how much will each have? If 4 barrels were divided, what would each have? What if 6 barrels were divided? What if 7 barrels were divided?

27. What is 1 fifth of 1? of 2? of 3? of 4? of 6? of 7?

28. What is 1 sixth of 1? of 2? of 3? of 4? of 5? of 7? of 8? of 9? of 10?

29. What is 1 seventh of 1? of 2? of 3? of 4? of 5? of 6?

30. What is 1 eighth of 1? of 2? of 3? of 4? of 5? of 6? of 7? of 8? of 9? of 10?

31. What is 1 ninth of 1? of 2? of 3? of 4? of 5? of 6? of 7? of 8? of 9? of 10? of 11?

32. What is 1 tenth of 1? of 2? of 3? of 4? of 5? of 6? of 7? of 8? of 9? of 10? of 11? of 12? of 13?

33. If 3 yards of cloth cost 2 dollars, what will 1 yard cost? What will 2 yards cost?

34. If 1 bushel of wheat cost 2 dollars, what will 1 third of a bushel cost? What will 2 thirds of a bushel cost?

35. What is 1 third of 2?

36. What is 2 thirds of 2?

37. If a load of wood cost 5 dollars, what will 1 third of a load cost? What will 2 thirds of a load cost?

38. What is 1 third of 5?

39. What is 2 thirds of five?

40. What is 2 thirds of 7?

41. If 4 bushels of salt cost 3 dollars, what will 1 bushel cost? What will 3 bushels cost?

42. What is 1 fourth of 3?

43. What is 3 fourths of 3?

44. If a barrel of cider cost 2 dollars, what will 1 fifth of a barrel cost? What will 2 fifths of a barrel cost?

45. What is 1 fifth of two?

46. What is 2 fifths of 2?

47. What is 1 fifth of 7?

48. What is 3 fifths of 7?

49. If 7 gallons of wine cost 5 dollars, what will a gallon cost? What will 4 gallons cost?

50. What is 1 seventh of 5?

51. What is 4 sevenths of 5?

52. What is 1 sixth of 4?

53. What is 5 sixths of 4?

54. If you divide 7 dollars among 8 men, what part of a dollar will you give them apiece? What would three of them have?

55. What is 1 eighth of 7?

56. What is 3 eighths of 7?

57. What is 1 ninth of 10?

58. What is 7 ninths of 10?

[Part 1.

59. What is 1 tenth of 14?

60. What is '4 tenths of 14?

61. If 5 yards of cloth cost 17 dollars, what is that a yard? What would 3 yards cost? What would 8 gards cost ?. ....

62. What is 3 fifths of 17?

63. What is 8 fifths of 17?

64. What is 5 sevenths of 20?

65. What is 2 ninths of 22?

66. What is 3 eighths of 27? 67. What is 2 thirds of 28?

68. What is 3 fourths of 31?

69. If 5 loads of hay cost 47 dollars, what is that a load? What will 2 loads cost? What will 7 loads cost? What will 12 loads cost?

70. What is 2 fifths of 47?

71. What is 7 fifths of 47?

72. What is 12 fifths of 47?

73. What is 4 sevenths of 48?

74. What is 4 ninths of 50?

75. What is 2 sevenths of 58? 76. What is 3 eighths of 61? 77. What is 4 tenths of 73?

78. What is 8 ninths of 65?

79. What is 9 tenths of 78?

80. What is 7 eighths of 70?

B. 1. If you divide 7 apples equally between 2 boys, how many would you give them apiece ?

2. How can you divide 5 oranges equally among 3 persons?

3. Divide 3 bushels of corn equally among 5 men, how much would you give them apiece?

4. A boy had 7 pears, and gave away 3 fifths of them; how many did he give away? and how many had he left?

5. If 2 yards of cloth cost 3 dollars, what is that a yard?

6. If 4 yards of cloth cost 2 dollars, what is that a yard?

[Let the answers be given in dollars and cents or in shillings. 1 dollar is 100 cents.]

7. If 5 bushels of corn cost  $\vec{7}$  dollars, what is that a bushel?

8. If a man receive 8 dollars for 6 days' work, what is that per day?

9. If 3 bushels of wheat cost 8 dollars, what will 2 bushels cost ?

10. A man had 30 dollars, and gave away 3 sevenths of it; how much did he give away?

11. If 4 yards of cloth cost 10 dollars, what will 3 yards cost?

12. If 3 barrels of cider cost 8 dollars, what will 10 barrels cost?

13. If 7 pounds of flour cost 40 cents, what will 10 pounds cost?

14. If 4 firkins of butter cost 26 dollars, what will 7 firkins cost?

15. If 3 men can do a piece of work in 7 days, how long will it take 1 man to do it? How long would it take 4 men?

16. If 2 pipes will empty a cistern in 3 hours, in how long a time would 1 empty it? In how long a time would 7 pipes empty it?

# SECTION XI.

A. 1. BOUGHT 1 half of a yard of cloth for 1 dollar and 1 half; what was that a yard?

2. 1 and 1 half is the half of what number?\*

3. If 1 third of a yard of cloth cost 1 dollar and 3 fourths of a dollar, how much does a yard cost?

\* See Sect. VI. art. A, and Sect. IX. art. B.

[Part 1

4. 2 and 3 fourths is 1 third of what number? 5. If 1 half of a barrel of beer cost 2 dollars and 1 fourth of a dollar, how much will a barrel cost? 6. 2 and 3 fourths is one half of what number? 7. If 1 fourth of a box of lemons cost 3 dollars and 2 thirds of a dollar, what will a box cost? 8. 2 and 2 thirds is 1 fourth of, what number? 9. 3 and 1 half is 1 fourth of what number? 10. If 1 third of a barrel of pork cost 4 dollars and 1 third of a dollar, what will a barrel cost? 11. 4 and 2 thirds is 1 third of what number? 12. If 1 sixth of a barrel of fish cost 2 dollars and 1 fifth of a dollar, what will a barrel cost? 13. 3 and 2 fifths is 1 sixth of what number? 14. If 1 fifth of a barrel of salmon cost 3 dollars and 2 sevenths of a dollar, what is that a barrel? 15. 4 and 3 sevenths is 1 fifth of what number? 16. If a man can travel 4 miles and 3 sevenths of a mile in 1 ninth of a day, how far will he travel in a whole day? 17. 5 and 3 sevenths is 1 ninth of what number? 18. 2 and 4 fifths is 1 seventh of what number? 19. 6 and 3 eighths is 1 eighth of what number? 20. 7 and 5 sixths is 1 third of what number? 21. 8 and 3 sevenths is 1 fourth of what number? 22. 5 and 3 tenths is 1 seventh of what number? 23. 8 and 5 ninths is 1 fifth of what number? 24. 9 and 4 fifths is 1 eighth of what number? 25. 6 and 4 tenths is 1 tenth of what number? 26. 7 and 4 ninths is 1 fifth of what number? 27. 8 and 7 tenths is 1 seventh of what number?

B. 1. If 2 thirds of a barrel of beef cost 3 dollars, what does 1 third of a barrel cost?

2. 3 is 2 times what number?\*

Ans. 3 is 2 times the half of 3; but 1 half of 3 is 3 \* See Section VI., article B.
#### Sect. 11.]

halves, or 1 and 1 half,\* therefore 3 is 2 times 1 and 1 half.

3. If 3 fifths of a yard of cloth cost 4 dollars, what will 1 fifth of a yard cost?

4. 5 is 3 times what number?

5. If 3 sevenths of a barrel of pork cost 2 dollars, what will 1 seventh of a barrel cost?

6. 2 is 3 times what number?

7. If 4 thirds of a bunch of shingles cost 5 dollars, what does 1 third of a bunch cost?

8. 7 is 4 times what number?

9. 2 is 4 times what number?

10. A man bought 4 ninths of a barrel of flour for 3 dollars; what would be the price of 1 ninth of a barrel at the same rate?

11. 5 is 4 times what number?

12. A man bought 5 eighths of a hundred-weight of sugar for 6 dollars; what would 1 eighth of a hundred-weight cost at the same rate?

13. 7 is 5 times what number?
14. 3 is 5 times what number?
15. 8 is 5 times what number?
16. 9 is 4 times what number?
17. 11 is 6 times what number?
18. 13 is 7 times what number?
19. 14 is 8 times what number?
20. 17 is 5 times what number?
21. 18 is 8 times what number?
22. 17 is 9 times what number?
23. 15 is 10 times what number?
24. 20 is 9 times what number?
25. 22 is 10 times what number?

27. If 2 thirds of a barrel of beef cost 3 dollars, what will 1 third of a barrel cost? What will the whole barrel cost?

\* See Section X., article A.

28. \* If 5 is 2 thirds of some number, what is 1 third of the same number? 2 and 1 half is 1 third of what number? Then 5 is two thirds of what number?

29. If 3 fourths of a barrel of flour cost 5 dollars, what will 1 fourth of a barrel cost? What will the whole barrel cost?

30. If 8 is 3 fourths of some number, what is 1 fourth of the same number? 2 and 2 thirds is 1 fourth of what number? Then 8 is 3 fourths of what number?

31. A man bought 2 sevenths of a barrel of oil for 5 dollars; how much will 1 seventh cost at the same rate? how much would a barrel cost?

32. If 9 is 2 sevenths of some number, what is 1 seventh of the same number? 4 and 1 half is 1 seventh of what number? Then 9 is 2 sevenths of what number?

33. Bought 5 eighths of a chaldron of coal for 7 dollars; what is the price of 1 eighth, at the same rate? What is the price of the whole chaldron?

34. If 12 is 5 eighths of some number, what is 1 eighth of the same number? 2 and 2 fifths is 1 eighth of what number? Then 12 is 5 eighths of what number?

35. If a man can do 7 ninths of a piece of work in 4 days, how long would it take him to do 1 ninth of it? how long would it take him to do the whole?

36. If 3 is 7 ninths of some number, what is 1 ninth of the same number? 3 sevenths is 1 ninth of what number? Then 3 is 7 ninths of what number?

37. If 3 fifths of a chaldron of coal cost 8 dollars, what is the whole chaldron worth?

38. 7 is 3 fifths of what number?

39. A man bought 6 sevenths of a cask of raisins for 5 dollars; what was the whole cask worth?

40. 8 is 6 sevenths of what number?

\* See Sect. VI., art. B, examples 8 and following.

41. A man had 4 sixths of a week's board for 5 dollars : how much is that for a whole week? 42. 3 is 5 sixths of what number? 43. 9 is 5 eighths of what number? 44. 10 is 7 thirds of what number? 45. 11 is 6 fifths of what number? 46. 12 is 7 fifths of what number? 47. 15 is 2 sevenths of what number? 48. 17 is 3 tenths of what number? 49. A man bought 5 eighths of a cask of wine for 19 dollars, what would the whole cask cost? 50. 19 is 3 eighths of what number? 51. 21 is 4 fifths of what number? 52. Bought 5 ninths of a ton of logwood for 23 dollars; what would a ton cost at that rate? 53. 23 is 7 ninths of what number? 54. 21 is 3 tenths of what number? 55. 29 is 4 sevenths of what number? 56. 31 is 5 eighths of what number? 57. 33 is 6 sevenths of what number? 58. 38 is 4 ninths of what number? 59. A man bought 1 barrel and 1 seventh of a barrel of wine for 41 dollars; what was that a barrel? NOTE. - 1 barrel and 1 seventh of a barrel is the same as 8 sevenths of a barrel. If 8 sevenths of a barrel cost .41 dollars, what does a barrel cost ? 60. 35 is 8 sevenths of what number? 61. A man bought 1 ton and 4 fifths of a ton (that is, 9 fifths of a ton) of fustic for 43 dollars, what was that a ton? 62. 52 is 9 fifths of what number? 63. Bought 1 ton and 2 sevenths of a ton of logwood for 48 dollars, what was that a ton? 64. 67 is 9 sevenths of what number? 65. 53 is 7 tenths of what number? 66. 58 is 9 eighths of what number?

67. 61 is 10 ninths of what number?

68. Bought 2 barrels and 1 fifth of a barrel of oil (that is, 11 fifths of a barrel) for 65 dollars; what was that a barrel?

69. 65 is 9 fifths of what number?

70. 71 is 8 elevenths of what number?

C. 1. A boy gave away 2 apples and 1 half, which was 1 fourth of all he had; how many had he?

2. A man gave away 3 dollars, which was 2 fifths of all the money he had; how much had he?

3. A man sold a cow for fifteen dollars, which was 4 fifths of what she cost him; how much did he lose by the bargain?

4. A man sold a piece of cloth for 37 dollars, which was 9 eighths of what it cost him; how much did he gain by the bargain?

5. There is a pole 3 fifths under water, and 7 feet out of the water; how long is the pole?

6. A man sold a piece of cloth for 47 dollars, by which bargain he lost 2 ninths of what the cloth cost him; how much did it cost him, and how much did he lose?

### Miscellaneous Examples.

1. If a staff 5 feet long cast a shadow 4 feet at 12 o'clock, what is the length of a pole that casts a shadow 67 feet at the same time?

2. If 53 gallons of water, in 1 hour, run into a cistern containing 97 gallons, and 44 gallons run out in an hour, in what time will it be filled?

3. A man bought a cask of wine containing 75 gallons; 2 sevenths of it leaked out, and he sold the remainder for 1 dollar a gallon; how much did he sell it for?

4. A cask of wine cost 67 dollars; what is 5 eighths of it worth?

5. A man bought 9 oranges for 6 cents and 2 sev-

-1

[Part 1

enths apiece, and sold them for 67 cents; what did he gain by the bargain?

6. A man bought 10 yards of broadcloth for 70 dollars; how must he sell it per yard in order to gain 14 dollars?

7. If when the days are 12 hours long, a man perform a journey in 3 days, how many hours is he in performing it?

8. If a man perform a journey in 36 hours, how many days would he be in performing it when the days are nine hours long?

9. If when the days are 11 hours long, a man can perform a journey in 5 days, in how many hours will he perform it? In how many days when the days are 9 hours long?

10. What number added to 2 fifths of 33, will make the number 17?

11. How many yards of cloth, that is 1 quarter of a yard wide, will line 10 yards that is 3 quarters wide?

12. 8 yards of cloth, that is 1 quarter wide, are equal to how many yards that is 4 quarters wide? 13. How many yards of cloth, that is 3 quarters

wide, are equal to 7 yards that is 5 quarters wide?

14. How many yards of cloth, that is 6 quarters wide, are equal to 37 that is 4 quarters wide?

15. If a piece of cloth, 5 quarters wide, be worth 37 dollars, what is a piece of the same length, 3 quarters wide, worth?

16. If cloth 4 quarters wide is worth 8 dollars a yard, what is 1 yard of the same kind of cloth, that is 5 guarters wide, worth?

## . SECTION XII.

PARTS of one are called fractions. Fractions may be expressed by figures, as well as whole numbers. It requires two numbers to express a fraction; one to show into how many parts one is divided, and the other to show how many of those parts are used. For example, if we wish to express *one half*, (which means that one is divided into two equal parts, and that one part is used,) we must use the figure 2 to express that one is divided into two equal parts and the figure 1 to show that one part is used. And these must be written in such a manner that we may always know what each of them is intended to express.

One half is usually written thus,  $\frac{1}{2}$ ; one number above a line, and the other below it. The number below the line shows into how many parts one is divided, and the number above the line shows how many parts are used.

One third is w	ritten	L	-	-		1
Two thirds	-	-	-	-	-	2
One fourth	-	-	-	-		1
Three fourths	-	-	-			3
Two fifths	-	-	-	-	- 4	22

*Example.* <sup>3</sup> of an apple signifies that the apple is to be cut into 7 equal parts, and that 3 parts are to be used.

Illustrate by a line, divided into 7 equal parts, and three of the parts taken. In the same way illustrate the meaning of the fractions  $\frac{4}{5}, \frac{4}{5}, \frac{3}{70}$ .

We may observe, that, when one is divided into 3 parts, the parts are called *thirds*; when one is divided into 4 parts, the parts are called *fourths*, &c.; that is, the fraction takes its name from the number of parts into which one is divided. The number under the line is called the *denominator*, because it gives name to the fraction; and the number above the line is called the *numerator*, because it shows the number of parts used. Thus  $\frac{3}{10}$ , 10 is the *denominator*, and 3 the *numerator*.

N. B. The pupil must be made familiar with this

mode of expressing fractions, and must be able to apply it to any familiar objects; as apples, oranges, &c.;\* or by blackboard, before he is allowed to proceed any farther. Particular care must be taken to make him understand what the denominator signifies, and what the numerator, as explained above. The denominator should always be explained first.

The following examples are a recapitulation of some of the foregoing sections, for the purpose of showing the application of the above method of writing fractions. Having analyzed the question, the pupil may write the required fraction on the blackboard.

## See Section VIII. A.

A. 1. In 2 how many times 1?\*

2. In 3 how many times  $\frac{1}{4}$ ?

3. In 2 how many times  $\frac{1}{4}$ ?

4. In 4 how many times  $\frac{1}{4}$ ?

5. In 6 how many times  $\frac{1}{4}$ ?

6. In 7 how many times  $\frac{1}{4}$ ?

7. In 8 how many times  $\frac{1}{5}$ ?

8. In 21 how many times 1?

9. In 31 how many times 1?

10. Reduce 41 to an improper fraction.1

11. Reduce 3<sup>2</sup> to an improper fraction.

12. Reduce  $5\frac{3}{4}$  to an improper fraction.

13. Reduce 6<sup>2</sup>/<sub>4</sub> to an improper fraction.

14. Reduce  $8_{10}^{3}$  to an improper fraction.

15. Reduce 94 to an improper fraction.

\* When the numerator is larger than the denominator, the fraction is called an *improper* fraction. See Key.

† 21 is read 2 and 1 half. It is called a mixed number.

<sup>‡</sup> That is, to find how many fifths there are in 4 and 1 fifth first, and how many fifths there are in 4.

[Part 1.

B.	1.	<pre># are how many times 1 ?</pre>
	2.	§ are how many times 1?
	3.	$\frac{7}{2}$ are how many times 1?
	4.	$\frac{8}{4}$ are how many times 1?
	5.	? are how many times 1?
	6.	<sup>1</sup> / <sub>9</sub> <sup>6</sup> are how many times 1?

### Miscellaneous Examples.

1. A man sold 8 yards of cloth for 3<sup>‡</sup> dollars a yard; what did it come to?

2. A man sold a horse for 76 dollars, which was § of what it cost him; how much did it cost him?

3. A man sold  $\frac{3}{5}$  of a gallon of wine for 40 cents; what was that a gallon?

4. If it will take  $1\frac{7}{5}$  yards of cloth to make a coat, how many yards will it take to make 7 coats?

5. If 1 horse consume  $3\frac{1}{7}$  bushels of oats in 2 days, how much would 2 horses consume in 5 days?

6. If, when the days are 9½ hours long, a man perform a journey in 10 days, in how many days would he perform it when the days are 12 hours long?

7. A man sold 8 yards of cloth for 73 dollars a yard, and received 8 firkins of butter at 63 dollars a firkin ; how much was then due to him?

8. Two men are 38 miles apart, and are travelling owards each other, one at the rate of 3 miles an hour, the other 2 miles; how much do they approach each other in an hour? How much in 2 hours? In how many hours will they meet? At what distance from each place from which they set out?

# SECTION XIII.

A. 1. If you give  $\frac{1}{2}$  of an orange to one boy, and  $\frac{1}{4}$  to another, how much more do you give the first than the second?

2.  $\frac{1}{2}$  of an orange is how many  $\frac{1}{4}$  of an orange?

3. If you give  $\frac{1}{2}$  of an orange to one boy, and  $\frac{1}{4}$  to another, how many  $\frac{1}{4}$  would you give away? How many  $\frac{1}{4}$  would you have left?

4.  $\frac{1}{2}$  and  $\frac{1}{4}$  are how many  $\frac{1}{4}$ ?

5. A man gave to one laborer  $\frac{1}{2}$  of a bushel of wheat, and  $\frac{3}{4}$  to another; how many  $\frac{1}{4}$  of a bushel did he give to both? How many bushels?

6.  $\frac{1}{2}$  and  $\frac{3}{4}$  are how many  $\frac{1}{4}$ ? How many times 1? 7. A man gave  $\frac{1}{2}$  of a barrel of flour to one man, and  $\frac{3}{6}$  of a barrel to another; to which did he give the most?

8.  $\frac{1}{2}$  is how many  $\frac{1}{2}$ ?

9. A man bought  $\frac{1}{3}$  of a bushel of wheat at one time, and  $\frac{2}{6}$  of a bushel at another; at which time did he buy the most?

10.  $\frac{1}{3}$  is how many  $\frac{1}{6}$ ?

11. A man bought  $\frac{3}{2}$  of a yard of cloth at one time, and  $\frac{4}{2}$  of a yard at another; at which time did he buy the most?

12.  $\frac{2}{3}$  are how many  $\frac{1}{6}$ ?

13. A man wished to give  $\frac{1}{2}$  of a bushel of wheat to one man, and  $\frac{1}{3}$  of a bushel to another; but he could not tell how to divide it. Another man standing by advised him to divide the whole bushel into six equal parts first, and then take  $\frac{1}{2}$  of them for one, and  $\frac{1}{3}$  of them for the other. How many parts did he give to each? How many to both? How many had he left?

14.  $\frac{1}{2}$  is how many  $\frac{1}{6}$ ?  $\frac{1}{3}$  is how many  $\frac{1}{6}$ ?  $\frac{1}{2}$  and  $\frac{1}{3}$  are how many  $\frac{1}{6}$ ?

15. A man paying some money to his laborers,

gave each man 1 of a dollar, and each boy 1 of a dollar; how much more did he give to a man than to a boy?

16. What is the difference between  $\frac{1}{2}$  and  $\frac{1}{6}$ ? 17. If a man can earn  $\frac{4}{5}$  of a dollar in a day, and a boy 1 of a dollar, how much does the man earn more than the boy?

18. What is the difference between  $\frac{4}{5}$  and  $\frac{1}{5}$ ?

19. A boy distributing some nuts among his companions, gave  $\frac{1}{3}$  of a quart to one, and  $\frac{1}{2}$  of a quart to another; how much more did he give to one, than to the other?

Note. Change them to sixths.

20. What is the difference between  $\frac{1}{4}$  and  $\frac{1}{4}$ ?

21. A man having two bushels of grain to distribute among his laborers, wished to give 1 of a bushel to one, and 2 of a bushel to another, and the rest to a third; but was at a loss to tell how to divide it; at last he concluded to divide each bushel into six equal parts, or sixths, and then to distribute those parts. How many sixths did he give to each?

22. <sup>2</sup>/<sub>3</sub> is how many <sup>1</sup>/<sub>5</sub>?23. A man had a horse, and a cow, and a sheep. The horse would eat 3 of a load of hay in the winter, the cow  $\frac{1}{2}$ , and the sheep  $\frac{1}{6}$ . How many  $\frac{1}{6}$  of a load would each eat? How many  $\frac{1}{6}$  would they all eat? How many loads?

24. A boy having a quart of nuts, wished to divide them, so as to give one companion 1, another 1, and a third { of them ; but in order to make a proper division, he first divided the whole into eic't equal parts, and then he was able to divide them as he wished. How many eighths did he give to each? How many eighths had he left for himself?

25.  $\frac{1}{2}$  is how many  $\frac{1}{2}$ ?  $\frac{1}{4}$  is how many  $\frac{1}{2}$ ?  $\frac{1}{2}$  and  $\frac{1}{4}$ and 1 are how many 1??

26. A man gave 3 of a barrel of flour to one man,

and § of a barrel to another; to which did he give the most? How much?

27. Which is the larger,  $\frac{3}{4}$  or  $\frac{5}{8}$ ? How much the larger?

28. A boy, having a pound of almonds, said he intended giving  $\frac{1}{3}$  of them to his sister, and  $\frac{1}{4}$  to his brother, and the rest to his mamma. His mamma smiling said she did not think he could divide them so. Oh, yes, I can, said he, I will first divide them into twelve equal parts, and then I can divide them well enough. Pray how many twelfths did he give to each?

29.  $\frac{1}{3}$  is how many  $\frac{1}{12}$ ?  $\frac{1}{4}$  is how many  $\frac{1}{12}$ ?  $\frac{1}{3}$  and  $\frac{1}{4}$  are how many  $\frac{1}{12}$ ?

30. Mr. Goodman having a pound of raisins, said he would give Sarah  $\frac{1}{3}$ , and Mary  $\frac{1}{4}$ , and James  $\frac{1}{6}$  of them, and he told Charles he should have the rest, if he could tell how to divide them. Well, said Charles, I would first divide the whole into twelve equal parts, and then I could take  $\frac{1}{3}$  and  $\frac{1}{4}$  and  $\frac{1}{6}$  of them. How many twelfths would each have?

31.  $\frac{1}{3}$  and  $\frac{1}{4}$  and  $\frac{1}{6}$  are how many  $\frac{1}{12}$ ?

32. George bought a pine-apple, and said he would give  $\frac{1}{4}$  of it to his papa, and  $\frac{2}{5}$  to his mamma, and  $\frac{3}{10}$ to his brother James, if he could divide it. James took it, and cut it into twenty equal pieces, and then distributed them as George had desired. How many twentieths did he give to each?

33.  $\frac{1}{2}$  is how many  $\frac{1}{20}$ ?  $\frac{1}{5}$  is how many  $\frac{1}{20}$ ?  $\frac{2}{5}$  is how many  $\frac{1}{20}$ ?  $\frac{1}{10}$  is how many  $\frac{1}{20}$ ?

34.  $\frac{1}{2}$  is how many  $\frac{1}{16}$ ? 35.  $\frac{1}{2}$  is how many  $\frac{1}{14}$ ? 36.  $\frac{1}{3}$  is how many  $\frac{1}{16}$ ? 37.  $\frac{1}{3}$  is how many  $\frac{1}{16}$ ? 38.  $\frac{3}{3}$  are how many  $\frac{1}{16}$ ? 39.  $\frac{3}{3}$  are how many  $\frac{1}{16}$ ? 40.  $\frac{1}{6}$  is how many  $\frac{1}{16}$ ?

[Part 1.

42.  $\frac{5}{2}$  are how many  $\frac{1}{18}$ ? 43. 4 are how many 1?? 44.  $\frac{6}{7}$  are how many  $\frac{1}{35}$ ? 45. 3 are how many 1? 46.  $\frac{2}{3}$  are how many  $\frac{1}{36}$ ? 47. 3 are how many 20? 48. Reduce 1 to sixths and 1 to sixths. 49.  $\frac{3}{4}$  and  $\frac{3}{4}$  are how many  $\frac{1}{4}$ ? 50. Reduce 1 and 1 to eighths. 51.  $\frac{1}{4}$  and  $\frac{1}{4}$  are how many  $\frac{1}{8}$ ? 52.  $\frac{1}{4}$  and  $\frac{1}{4}$  are how many  $\frac{1}{4}$ ? 53.  $\frac{2}{3}$  and  $\frac{1}{4}$  are how many  $\frac{1}{4}$ ? 54.  $\frac{1}{4}$  and  $\frac{2}{5}$  are how many  $\frac{1}{5}$ ? 55.  $\frac{1}{4}$  and  $\frac{2}{3}$  are how many  $\frac{1}{4}$ ? 56.  $\frac{1}{2}$  and  $\frac{2}{3}$  are how many  $\frac{1}{10}$ ? 57.  $\frac{1}{4}$  and  $\frac{1}{4}$  and  $\frac{1}{4}$  are how many  $\frac{1}{8}$ ? 58.  $\frac{1}{2}$  and  $\frac{3}{5}$  and  $\frac{1}{10}$  are how many  $\frac{1}{10}$ ? 59.  $\frac{2}{3}$  and  $\frac{1}{4}$  are how many  $\frac{1}{12}$ ? 60. 3 and 1 and 1 are how many 12? 61.  $\frac{3}{5}$  and  $\frac{3}{10}$  and  $\frac{1}{4}$  are how many  $\frac{1}{20}$ ? 62. 1 and 1 and 2 and 1 and 1 are how many 1 ? 63.  $\frac{1}{2}$  and  $\frac{3}{4}$  are how many  $\frac{1}{14}$ ? 64.  $\frac{2}{3}$  and  $\frac{1}{6}$  are how many  $\frac{1}{16}$ ? 65.  $\frac{2}{3}$  and  $\frac{3}{2}$  are how many  $\frac{1}{15}$ ? 66.  $\frac{2}{3}$  less  $\frac{1}{6}$  are how many  $\frac{1}{6}$ ? 67.  $\frac{2}{3}$  and  $\frac{3}{4}$ , less  $\frac{5}{12}$ , are how many  $\frac{1}{12}$ ? 68.  $\frac{5}{4}$  less  $\frac{2}{3}$  are how many  $\frac{1}{18}$ ? 69.  $\frac{5}{6}$  less  $\frac{3}{8}$  are how many  $\frac{1}{24}$ ? 70  $\frac{4}{5}$  less  $\frac{2}{7}$  are how many  $\frac{1}{35}$ ? 71  $\frac{1}{2}$ , and  $\frac{3}{4}$ , and  $\frac{1}{5}$ , and  $\frac{4}{72}$ , less  $\frac{5}{5}$ , are how many  $\frac{1}{24}$ ? 72. 1, and 1, and 2, and 1, and 1, less 7, are how many 40? 73.  $\frac{1}{4}$  and  $\frac{3}{4}$  are how many  $\frac{1}{42}$ ? 74.  $\frac{3}{5}$  and  $\frac{5}{7}$  are how many  $\frac{1}{56}$ ? 75.  $\ddagger$  and  $\ddagger$  are how many  $= \frac{1}{5}$ ?

When the denominators in two or more fractions are

118

the same, the fractions are said to have a common denominator. Thus & and & have a common denominator. We have seen that, when two or more fractions have a common denominator, they may be added and subtracted as well as whole numbers. We add or subtract the numerators, and write their sum or difference over the common denominator. The first part of the process in the above examples was to reduce them to a common denominator.

76. Reduce 2 and 2 to a common denominator. Note. They may be reduced to twelfths.

If it cannot be immediately seen what number must be the common denominator, it may be found by mul-tiplying all the denominators together; for that will always produce a number divisible by all the denominators.

- 77. Reduce 3 and 3 to a common denominator.
- 78. Reduce <sup>2</sup>/<sub>3</sub> and <sup>3</sup>/<sub>4</sub> to a common denominator.
- 79. Reduce  $\frac{1}{3}$  and  $\frac{3}{7}$  to a common denominator.
- 80. Reduce  $\frac{3}{7}$  and  $\frac{2}{5}$  to a common denominator.
- 81. Reduce 1 and 2 and 2 to a common denominator.
- 82. Add together 3 and 2.
- 83. Add together 3 and 14.
- 84. Add together  $\frac{3}{5}$  and  $\frac{14}{156}$ . 85. Add together  $\frac{1}{2}$  and  $\frac{3}{5}$  and  $\frac{13}{10}$ .
- 86. Subtract 1 from 1.
- 87. Subtract 30 from 2.
- 88. Subtract <sup>2</sup>/<sub>7</sub> from <sup>2</sup>/<sub>3</sub>.
- 89. Subtract 2 from 2.

B. 1. Mr. F. said he would give  $\frac{1}{2}$  of a pine-apple to Fanny, and  $\frac{2}{5}$  to George, and the rest to the one that could tell how to divide it, and how much there would be left. But neither of them could tell; so he kept it himself. Could you have told, if you had been there? How would you divide it? How much would be left?

[Part ]

2. A man sold  $1\frac{1}{2}$  bushels of wheat to one man,  $4\frac{3}{4}$  bushels to another; how many bushels did he sell to both?

3. A man bought  $6\frac{1}{2}$  bushels of wheat at one time, and  $2\frac{1}{3}$  at another; how much did he buy in the whole?

4. A man bought  $7_3^2$  yards of one kind of cloth, and  $6_3^2$  yards of another kind; how many yards in the whole?

5. A man bought  $\frac{3}{5}$  of a barrel of flour at one time,  $2\frac{1}{2}$  barrels at another, and  $6\frac{3}{4}$  at another; how much did he buy in the whole?

6. A man bought one sheep for 43 dollars, and another for 53 dollars; how much did he give for both?

7. There is a pole standing, so that  $\frac{1}{3}$  of it is in the mud, and  $\frac{2}{3}$  of it in the water, and the rest out of the water; how much of it is out of the water?

8. A man having undertaken to do a piece of work, did  $\frac{1}{2}$  of it the first day,  $\frac{1}{3}$  of it the second day, and  $\frac{1}{6}$  of it the third day, how much of it did he do in three days?

9. A man having a piece of work to do, hired two men and a boy to do it. The first man could do  $\frac{1}{3}$  of the work in a day, and the other  $\frac{1}{4}$  of it, and the boy  $\frac{1}{3}$  of it; how much of it would they all do in a day?

Note. By dividing a line into halves, and then into fourths, it will be seen that  $\frac{2}{4}$  is the same as  $\frac{1}{2}$ ; a line divided into halves and then into sixths, will show that  $\frac{2}{6}$  is the same as  $\frac{1}{2}$ , and  $\frac{4}{5}$  as  $\frac{2}{5}$ ;  $\frac{2}{4}$ ,  $\frac{2}{5}$ , can therefore be reduced to  $\frac{1}{2}$ , and  $\frac{4}{5}$  to  $\frac{2}{5}$ . This is called reducing fractions to their lowest terms. It is done by dividing by the greatest number that will divide it without a remainder.

- C. 1. Reduce § to its lowest terms.\* Ans. <sup>3</sup>/<sub>4</sub>.
  - 2. Reduce  $\frac{5}{10}$  to its lowest terms.
  - 3. Reduce § to its lowest terms.

\* If this article should be found too difficult for the pupil, he may omit it till after the next section. Reduce <sup>4</sup>/<sub>1</sub> to its lowest terms.
 Reduce <sup>4</sup>/<sub>1</sub> to its lowest terms.
 Reduce <sup>4</sup>/<sub>1</sub> to its lowest terms.
 Reduce <sup>4</sup>/<sub>2</sub> to its lowest terms.
 Reduce <sup>4</sup>/<sub>2</sub> to its lowest terms.
 Reduce <sup>4</sup>/<sub>1</sub> to its lowest terms.
 Reduce <sup>4</sup>/<sub>1</sub> to its lowest terms.
 Reduce <sup>4</sup>/<sub>2</sub> to its lowest terms.

Note. It will be seen by the above section that if both the numerator and denominator be multiplied by the same number, the value of the fraction will not be altered; or if they can both be divided by the same number without a remainder, the fraction will not be altered.

### SECTION XIV.

A. 1. A BOY having  $\frac{1}{2}$  of an orange gave away  $\frac{1}{2}$  of that, what part of the whole orange did he give away?

2. What is  $\frac{1}{2}$  of  $\frac{1}{2}$ ?

3. If you cut an apple into three pieces, and then cut each of those pieces into two pieces, how many pieces will the whole apple be cut into? What part of the whole apple will one of the pieces be?

4. What is  $\frac{1}{2}$  of  $\frac{1}{4}$ ?

5. A boy had  $\frac{1}{2}$  of a pine apple, and cut that half into three pieces, in order to give away  $\frac{1}{3}$  of it. What part of the whole apple did he give away?

6. What is  $\frac{1}{3}$  of  $\frac{1}{3}$ ?

7. If an orange be cut into 4 parts, and then each of the parts be cut in two, how many pieces will the whole be cut into?

8. What is  $\frac{1}{2}$  of  $\frac{1}{4}$ ?

[Part 1.

9. A man having  $\frac{1}{2}$  of a barrel of flour, sold  $\frac{1}{4}$  of that; how much did he sell?

10. What is  $\frac{1}{2}$  of  $\frac{1}{2}$ ?

11. If an orange be cut into 4 equal parts, and each of those parts be cut into 3 equal parts, how many parts will the whole orange be cut into?

12. What is 1 of 1?

13. A boy having  $\frac{1}{3}$  of a quart of chestnuts, gave away 1 of what he had. What part of the whole quart did he give away ?

14. What is 1 of 1?

15. What is  $\frac{1}{2}$  of  $\frac{1}{2}$ ?

16. A man owning  $\frac{1}{5}$  of a ship, sold  $\frac{1}{5}$  of his share : what part of the ship did he sell, and what part did he then own?

17. What is  $\frac{1}{3}$  of  $\frac{1}{3}$ ? 18. What is  $\frac{1}{5}$  of  $\frac{1}{4}$ ?

19. What is 1 of 1?

20. What is ½ of ½? 21. What is ½ of ½? 22. What is ½ of ½?

23. What is 1 of 1?

24. What is  $\frac{1}{3}$  of  $\frac{1}{8}$ ? 25. What is  $\frac{1}{6}$  of  $\frac{1}{8}$ ? 26. What is  $\frac{1}{6}$  of  $\frac{1}{7}$ ?

27. What is 1 of 1?

28. What is 1 of 1?

29. A boy having 3 of an orange, (that is, 2 pieces,) gave his sister 1 of what he had; how many thirds did he give her?

30. What is 1 of 3?

31. A boy having  $\frac{3}{4}$  of a pine apple, said he would give one half of what he had to his sister, if she could tell how to divide it. His sister says, you have got  $\frac{3}{4}$ , or three pieces, if you cut them all in two, you can give me  $\frac{1}{2}$  of them. But  $\frac{1}{2}$  of  $\frac{1}{4}$  is  $\frac{1}{8}$ , therefore **b** shall have 3 of the whole pine apple.

32. What is  $\frac{1}{2}$  of  $\frac{3}{4}$ ?

33. A man owning  $\frac{3}{4}$  of a share in the Boston Bank, sold  $\frac{1}{3}$  of his part. What part of a share did he sell?

34. What is  $\frac{1}{3}$  of  $\frac{3}{4}$ ?

35. A man owning  $\frac{4}{5}$  of a ship, sold  $\frac{1}{4}$  of his share; what part of the whole ship did he sell? What part had he left?

36. What is 1 of #?

37. What is 1 of #?

38. What is  $\frac{1}{3}$  of  $\frac{6}{7}$ ?

39. What is 1 of 2?

40. What is 1 of 1,2?

41. What is { of }?

42. A man owning  $\frac{5}{6}$  of a share in the Boston Bank, sold  $\frac{1}{3}$  of his part; what part of a whole share did he sell?

43. What is  $\frac{1}{3}$  of  $\frac{5}{6}$ ?

44. What is 1 of 2?

45. A boy having  $\frac{4}{5}$  of a water-melon, wished to divide his part equally between his sister, his brother, and himself, but was at a loss to know how to do it; but his sister advised him to cut each of the fifths into 3 equal parts. How many pieces did each have? and what part of the whole melon was each piece?

46. What is \$\frac{1}{3}\$ of \$\frac{2}{3}\$?
47. What is \$\frac{1}{3}\$ of \$\frac{3}{4}\$?
48. What is \$\frac{1}{3}\$ of \$\frac{1}{3}\$?
49. What is \$\frac{1}{3}\$ of \$\frac{1}{3}\$?
50. What is \$\frac{1}{3}\$ of \$\frac{1}{4}\$?
51. What is \$\frac{1}{3}\$ of \$\frac{1}{4}\$?
52. What is \$\frac{1}{3}\$ of \$\frac{1}{3}\$?
53. What is \$\frac{1}{3}\$ of \$\frac{2}{3}\$?
55. What is \$\frac{1}{3}\$ of \$\frac{2}{3}\$?
56. What is \$\frac{1}{3}\$ of \$\frac{2}{3}\$?
57. What is \$\frac{1}{3}\$ of \$\frac{2}{3}\$?

[Part 1.

58. What is  $\frac{2}{3}$  of  $\frac{2}{3}$ ? 59. What is  $\frac{2}{3}$  of  $\frac{2}{3}$ ? 60. What is  $\frac{2}{3}$  of  $\frac{2}{3}$ ? 61. What is  $\frac{2}{3}$  of  $\frac{2}{3}$ ? 62. What is  $\frac{1}{3}$  of  $\frac{2}{3}$ ? 63. What is  $\frac{1}{3}$  of  $\frac{2}{3}$ ? 64. What is  $\frac{1}{10}$  of  $\frac{2}{3}$ ? 65. What is  $\frac{1}{70}$  of  $\frac{2}{3}$ ? 66. What is  $\frac{2}{3}$  of  $\frac{2}{3}$ ? 67. What is  $\frac{2}{5}$  of  $\frac{2}{3}$ ?

68. What is § of §?

69. If a yard of cloth cost 21 dollars, what will 1 of a yard cost?

70. What is 1 of 21?

71. A boy had  $2\frac{1}{2}$  oranges, and wished to give  $\frac{1}{3}$  of them to his sister, and  $\frac{1}{3}$  to his brother, but he did not know how to divide them equally. His brother told him to cut the whole into halves, and then cut each of the halves into 3 pieces. What part of a whole orange did each have?

72. What is  $\frac{1}{3}$  of  $2\frac{1}{2}$ ?

73. A man bought 4 bushels of corn for  $3\frac{2}{3}$  dollars; what part of a dollar did 1 bushel cost?

Change the  $3\frac{2}{3}$  to thirds, and then find  $\frac{1}{4}$  of  $\frac{1}{3}$  as above.

74. What is 1 of 53?

75. If 5 bushels of wheat cost  $7\frac{3}{4}$  dollars, what is that a bushel?

76. What is 1 of 73?

77. A man bought 6 gallons of alcohol for  $8\frac{2}{5}$  dollars; what was that a gallon?

78. What is 1 of 83?

79. A man bought 7 gallons of wine for 84 dollars how much was that a gallon?

80. What is  $\frac{1}{7}$  of  $8\frac{4}{7}$ ?

81. A man bought 10 pieces of nankin for  $6\frac{2}{3}$  dollars; how much was it a piece?

82. What is  $1_0$  of  $6\frac{3}{2}$ ?

83. If 9 bushels of rye cost 72 dollars, what is that a bushel?

84. What is 1 of 73? 85. What is 1 of 53?

86. What is 1 of 85?

87. What is  $\frac{1}{4}$  of  $6\frac{3}{10}$ ?

88. What is 1 of 94?

89. A man bought 7 yards of cloth for 183 dollars; what was that a yard? What would 3 yards cost at that rate?

90. What is \$ of 183? What is \$ of 183?

91. A man bought 5 barrels of cider for 273 dollars; what was it a barrel? What would 7 barrels cost at that rate?

92. What is  $\frac{1}{5}$  of 27 $\frac{3}{2}$ ? What is  $\frac{7}{5}$  of 27 $\frac{3}{5}$ ?

93. If 6 barrels of flour cost 38<sup>‡</sup> dollars, what would 10 barrels cost at that rate?

94. What is 10 of 384?

B. 1. A man bought a piece of cloth for  $42\frac{3}{4}$  dollars, and was obliged to sell it for # of what it cost him ; how much did he lose?

2. A man bought a quantity of flour for 53<sup>2</sup> dollars, and sold it for 2 of what it cost him; how much did he gain?

3. If 7 men can do a piece of work in 42 days, how long will it take 1 man to do it? How long will it take 3 men to do it?

4. If 4 men can do a piece of work in 93 days, how long would it take to do it if 7 men were em ployed?

5. There is a pole standing so that  $\frac{3}{7}$  of it is in the water, and 2 as much in the mud; how much is in the mud?

6. If a man can travel 135 miles in 3 hours, how many miles will he travel in 8 hours?

[Part 1.

7. If 5 horses will eat 26% loads of hay in a year, what will 8 horses eat in the same time?

8. If 4 pipes will empty a cistern in 65 hours, how long will it take 7 pipes of the same size te empty it?..

### SECTION XV.

A. 1. A BOY having 2 oranges wished to give 4 of an orange apiece to his playmates; how many could he give them to? If he had given 3 of an orange apiece, how many could he have given them to? 2. How many times  $\frac{1}{3}$  are there in 2? How many

times 3 are there in 2?

3. A man having 3 bushels of corn, distributed it among some poor persons, giving them 3 of a bushel each; to how many did he give it?

Note. First find how many he would have given it to, if he had given 1 of a bushel to each.

4. In 3 are how many times  $\frac{1}{4}$ ? How many times  $\frac{3}{4}$ ? 5. If  $\frac{2}{5}$  of a barrel of flour will last a family one month, how long will 4 barrels last the same family? How long will 6 barrels last? How long will 10 barrels last?

6. How many times is  $\frac{2}{5}$  contained in 4? How many times in 6? How many times in 10?

7. If  $\frac{3}{4}$  of a bushel of wheat will last a family one week, how many weeks will 63 bushels last the same family?

8. How many times is  $\frac{2}{3}$  contained in  $6\frac{2}{3}$ ?

9. There is a cistern having a pipe which will fill it in § of an hour; how many times would the pipe fill the cistern in 32 hours?

10. How many times is  $\frac{2}{5}$  contained in  $3\frac{2}{5}$ ?

11. How much cloth at 11 dollars (that is 3 dollars) a yard can be bought for 4 dollars?

12. How many times is 11 or 3 contained in 4?

13. A man distributed 81 bushels of wheat among some poor persons, giving  $1\frac{1}{2}$  bushels to each; how many did he give it to?

14. How many times is 11 contained in 81?

15. If a soldier is allowed 11 pounds (that is 1 of a pound) of meat in a day, to how many soldiers would 63 pounds be allowed?

16. How many times is 11 contained in 62?

17. If 13 tons of hay will keep a horse through the winter, how many horses will 10 tons keep?

18. How many times is 12 contained in 10?

19. At 21 dollars a box, how many boxes of raisins can be bought for 10 dollars?

20. How many times is  $2\frac{1}{3}$  contained in 10?

21. At 13 dollars a pound, how many pounds of indigo can be bought for 93 dollars?

22. How many times is 13 contained in 93?

23. At 14 dollars a barrel, how many barrels of raisins can be bought for 93 dollars?

24. How many times is 1<sup>‡</sup> contained in 9<sup>3</sup>/<sub>?</sub>?

25. At 7 of a dollar apiece, how many pieces of nankin can be bought for 83 dollars?

26. How many times is 3 contained in 83?

27. At 5 of a dollar a pound, how many pounds of tea can be bought for 7% dollars?

28. How many times is § contained in 73?

29. How many times is  $3\frac{1}{3}$  contained in  $7\frac{2}{3}$ ?

30. How many times is 51 contained in 17?

31. How many times is 41 contained in 93?

32. How many times is 33 contained in 124?

B. 1. At  $\frac{1}{10}$  of a dollar a pound, how many pounds of meat can be bought for  $\frac{1}{2}$  of a dollar?

Note. Change  $\frac{1}{2}$  to tenths. 2. How many times is  $\frac{1}{10}$  contained in  $\frac{1}{2}$ ?

3. A man having 3 of a barrel of flour, distributed it among some poor persons, giving them  $\frac{1}{4}$  of a barrel apiece; how many did he give it to?

Note. Change both fractions to twelfths; that is, reduce them to a common denominator.

4. How many times is  $\frac{1}{4}$  contained in  $\frac{3}{4}$ ?

5. If a pound of almonds cost  $\frac{1}{2}$  of a dollar, how many pounds can be bought for  $\frac{2}{3}$  of a dollar?

Note. Reduce the fractions to a common denominator.

6. How many times is  $\frac{1}{2}$  contained in  $\frac{2}{3}$ ?

7. If a piece of nankin cost  $\frac{2}{3}$  of a dollar, how many pieces can be bought for  $4\frac{3}{4}$  dollars? that is,  $\frac{19}{4}$  dollars?

8. How many times is  $\frac{2}{3}$  contained in  $4\frac{3}{4}$ ?

9. If a bushel of barley cost  $\frac{2}{5}$  of a dollar, how many bushels can be bought for  $\frac{2}{5}$  of a dollar? How many for  $1\frac{4}{5}$  dollars?

10. How many times is  $\frac{3}{5}$  contained in  $\frac{7}{5}$ ? How many times in  $1\frac{5}{5}$ ?

11. How many times is 3 contained in 3?

12. How many times is  $\frac{2}{3}$  contained in  $\frac{4}{5}$ ?

## TABLES OF COINS, WEIGHTS, AND MEASURES.

### Table I. - FEDERAL MONEY.

Federal Money is the currency of the United States.

10	mills (m.)	make	1 cent,	marked	ct.		
10	cents	66	1 dime	66	d.		
10	dimes	66	1 dollar,	66	doll.	or <b>f</b>	-
10	dollars	61	1 Eagle,	"	<i>E</i> .		

### Table II. - STERLING MONEY.

Sterling Money is the currency of England.

4	farthings (gr. or far.)	make	1 penry,	marke	d d.
12	pence	66	1 shilling,	66	
20	shillings	66	1 pound, or	a sovereign, "	£
21	shillings	66	1 guinea.		

# Table III. - TROY WEIGHT.

### Used in weighing Gold, Silver, and some Liquids.

24	grains (gr.)	make	1 pennyweight,	marked	divi
20	penny weights	66	1 ounce,	66 - D	02.
12	ounces	"	1 pound,	66	Ш

#### Table IV. - AVOIRDUPOIS WEIGHT.

Used in weighing Groceries, Hay, &c., and all the Metals, except Gold and Silver. It is now the custom to allow 100 lbs. for a hundred-weight instead of 112 as formerly.

16	drams (dr.)	make	1	ounce,	m	arked	02.
16	ounces	66	1	pound,		66	lb.
25	pounds	66	1	quarter,		66	gr.
4	quarters	- 66 -	1	hundred-weight,		66	cot.
20	hundred-weight	66	1	ton,		66	<i>T</i> .
4 20	quarters hundred-weight	- 66 - 66	11	hundred-weight, ton,		"	cwt T.

### Table V. - CLOTH MEASURE.

Used in measuring Woollens and other Cloths.

21 inches (in.)	make	1 nail,	marke	ed na.
4 nails, or 9 in.	66	1 quarter of a yard		qr.
4 quarters	"	1 yard,	66	yd.
3 quarters	66	1 Flemish ell,	66	Fl. e.
5 quarters		1 English ell,	66	E. e.
6 quarters		1 French ell,	**	F. e.

# Table VI. - WINE MEASURE.

Used in measuring Wines, &c.

4 gills (gi.)	make	1 pint,	mark	ed pl.
2 pints	66	1 quart,	66	qt.
4 quarts	66	1 gallon,	66	gal.
31 <sup>1</sup> / <sub>2</sub> gallons	66	1 barrel,	bar.	or bbl.
42 gallons	66	1 tierce,	66	tier.
63 gallons, or 2 barrels	66	1 hogshead,	66	hhd.
2 hogsheads	66	1 pipe or butt.	66	pi.
2 pipes	66	1 tun,	66	tun.

## Table VII. - DRY MEASURE.

Used in measuring Grains, Salt, Oysters, &c.

2 pints 8 quarts	make 1 quart, " 1 neck	marked qt.
4 pecks	" 1 bushel,	" bu.

[Part 1

# Table VIII. - MEASURE OF TIME.

60 seconds (sec.)	make	1 minute,	marked	min.
24 hours	66	1 day,	66	dy.
7 days 4 weeks	66	1 week, 1 month,	66 66	wk. mc.
13 months, 1 day and 6 hours, or 12 calendar months	**	1 year,	44	yr.

For convenience of reckoning, it is usual in calendars to call the year 365 days for 3 successive years, and every fourth year 366, (for in 4 years the six hours overplus amount to a day,) which is called bissextile or leap year. This day is added to February.

The common year is divided into twelve months, which are sometimes called *calendar* months, because they are the months used in calendars.

The names of the months, and the number of days in each are as follows :

	Names.	Number of days.
ſ 1.	January	31
2.	February	28, in leap year 29
3.	March	- 31
4.	April	30
5.	May	31
6.	June	30
7.	July	31
8.	August	31
2 9.	September	30
10.	October	31
111.	November	30
2	210101000	
12	December	81
)	Decomber	
	1.         2.         3.         4.         5.         6.         7.         8.         9.         10.         11.         12.	Names. 1. January 2. February 3. March 4. April 5. May 6. June 7. July 8. August 9. September 10. October 11. November 12. December

Miscellaneous Examples.

1. In 2 pounds how many ounces?

2. In 8 yards how many quarters?

4.  $\frac{3}{10}$  of a dollar is how many cents?

5. How many farthings is  $\frac{2}{5}$  of a penny?

6. How many pence is a of a shilling?

7. 3 of a yard is how many quarters and nails?

8. In £3 how many shillings?

9. How much is \$ of a shilling?

10. How much is  $\frac{4}{5}$  of a bushel of wheat?

11. How much would 3 of a barrel of wine cost, at one dollar a gallon?

12. How much would { cwt. of sugar cost, at 8 cents a pound?

13. How much is  $\frac{5}{2}$  of a day?

14. How much is  $\frac{3}{2}$  of a day?

15. How much is  $\frac{2}{3}$  of a week?

16. How much is <sup>2</sup>/<sub>4</sub> of an hour?

17. How much would 3 of a hogshead of wine cost, at 2 dollars a gallon?

18. If a man spend 28 dollars in a month, what is that a week? How much a day?

19. If a man spend 16 dollars a week, what is that a day?

20. If a man buy 4 bushels of grain for 5 dollars, how much is that a bushel?

21. If wine is 2 dollars a gallon, how much is that a pint?

22. If you give 5 cents a gill for wine, what is that a pint? What is it a quart? What is it a gallon?

23. If wine is worth 20 cents a pint, what is that a gill? What is it a quart? What is it a gallon? 24. If a yard of cloth is worth 7 dollars, what are

23 yards worth?

25. If a man earn 11 dollars a week, what is that a day? What for 3 days? What for 41 days?

26. If a man earn 23 dollars in a day, what will he earn in a week?

27 What is \$ of a hogshead of wine? 28. 1 farthing is what part of a penny? 29. 2 farthings is what part of a penny? 30. 3 farthings is what part of a penny? 31. 1 penny is what part of a shilling?32. 2 pence is what part of a shilling? 33. 3 pence is what part of a shilling? 34. 5 pence is what part of a shilling? 35. 6 pence is what part of a shilling? 36. 7 pence is what part of a shilling? 37. 8 pence is what part of a shilling? 38. 9 pence is what part of a shilling? 39. 10 pence is what part of a shilling? 40. 11 pence is what part of a shilling? 41. 1 shilling is what part of a pound? 42. 2 shillings is what part of a pound? 43. 3 shillings is what part of a pound?

44. 4 shillings is what part of a pound?

45. 5 shillings is what part of a pound?

46. What part of a pound is 6 shillings? 7 shillings? 8 shillings? 9 shillings? 10 shillings? 11 shillings? 12 shillings? 13 shillings? 14 shillings? 15 shillings? 16 shillings? 17 shillings? 18 shillings? 19 shillings?

47. How many farthings are there in a shilling? -

48. One farthing is what part of a shilling?

49. 2 farthings is what part of a shilling? 3 farthings? 4 farthings? 5 farthings? 6 farthings? 7 farthings? 8 farthings? 9 farthings? 10 farthings?

50. How many pence are there in a pound?

51. One penny is what part of a pound?

52. What part of a pound is 2 pence? 3 pence? 4 pence? 5 pence? 6 pence? 7 pence? 8 pence? 11 pence? 15 pence? 27 pence? 35 pence?

53. How many pence are there in 1 shilling and 6 pence?

54. In 2 shillings ard 4 pence, how many pence?

55. In 4 shillings and 5 pence, how many pence?

56. In 5 shillings and 8 pence, how many pence?

57. In 9 shillings and 11 pence, how many pence i

58. What part of £1 is 2s. 6d.?

59. 3s. 5d. is what part of £1?

Note. Reduce the whole to pence.

60. 7s. 8d. is what part of £1?

61. What is the price of 2 yards of cloth, at 3s. 4d a yard?

62. What will 8 yards of cloth cost, at 2s. 8d. a yard?

63. What will 4 bushels of wheat cost, at 5s. 9d. a bushel?

64. What must you give for 4 barrels of cider, at 21 dollars a barrel?

65. If 3 bushels of wheat be divided between 2 men, how much would they have apiece?

66. If 4 bushels of corn be divided among 5 men, how much would they have apiece?

67. If 3 bushels of corn be divided among 7 men, how much would they have apiece?

68. How many nails are there in 1 yard?

69. How many nails are there in 4 yards?

70. How many nails are there in 5 yards and 2 nails?

71. In 7 yards and 3 quarters, how many quarters?

72. In 4 yards, 2 quarters, and 3 nails, how many nails?

73. 1 nail is what part of a quarter?

74. 3 nails is what part of a quarter?

75. 1 nail is what part of a yard? 76. What part of 1 yard is 3 nails? 5 nails? 7 nails? 10 nails? 15 nails?

77. In 8 quarters of a yard how many yards?

78. In 12 quarters of a yard how many yards?

79. In 10 quarters of a yard how many yards?

80. In 15 quarters of a yard how many yards?

[Part 1.

81. In 12 nails how many quarters of a yard?

82. In 16 nails how many quarters of a yard? How many yards?

83. In 24 nails how many quarters of a yard? How many yards?

84. In 35 quarters of a yard how many yards?

85. In 45 nails how many yards?

86. In 63 nails how many yards?

87. At 2 cents a nail what would 4 yards of cloth cost?

88. At 23 dollars for 1 quarter of a yard, what would 2 yards cost?

89. 1 oz. is what part of a lb.?

90. What part of a lb. is 2 oz.? 3 oz.? 4 oz.? 5 oz.? 7 oz.? 10 oz.? 15 oz.?

91. What part of a qr. of 1 cwt. is 1 lb.? 2 lbs.? 3 lbs.? 4 lbs.? 7 lbs.? 9 lbs.? 14 lbs.? 18 lbs.? 23 lbs.?

32. At 3 cents for 1 oz. what would 1 lb. cost?

93. At 3 cents for 2 oz. what would 1 lb. cost?

94. At 3 cents for 8 oz. what would 1 lb. cost?

95. At 5 cents for 10 oz. what would 1 lb. cost?

96. At 8 shillings for 4 lbs. what would 10 lbs. cost?

97. If a man consume 1 lb. and 3 oz. of meat in a day, how much would he consume in a week?

98. If a man spend 23 dollars in a day, how much would he spend in a week?

99. If a man travel 3<sup>2</sup> miles in an hour, how far would be travel in 3 hours? How far in 7 hours? How far in 12 hours?

100. If 2 men start from the same place, and travel in opposite directions; one at the rate of  $3\frac{3}{2}$  miles in an hour, and the other  $4\frac{1}{5}$  miles; how far will they be apart at the end of 1 hour? How far at the end of 2 hours? How far at the end of 3 hours? How far at the end of 7 hours?

Sect. 15.]

101. Two men start from the same place, and travel the same way; one at the rate of 44 miles in an hour, the other at the rate of 44 miles in an hour; how far will they be apart at the end of 1 hour? How far in 2 hours? How far in 5 hours? How far in 10 hours? How far in 3 days, if they travel 10 hours in a day?

102. How many yards of cloth, at 5 dollars a yard, must be given for 8 barrels of flour, at 7 dollars per barrel?

103. What part of a month is 1 week? 2 weeks? 3 weeks?

104. What part of a year is 1 month? 2 months? 3 months? 4 months? 5 months? 6 months? 7 months? 8 months? 9 months? 10 months? 11 months?

105. What part of 1 month is 1 day? 2 days? 3 days? 7 days? 8 days? 11 days? 15 days? 18 days? 20 days? 24 days? 27 days?

106. If 5 bushels of oats will keep 7 horses through the winter, how many bushels will it take to keep 12 horses the same time?

107. If you give 7 men  $2\frac{1}{5}$  bushels of corn apiece, how many bushels would it take for the whole?

108. A man, failing in trade, was able to pay his creditors only 4 shillings on a dollar; how much would he pay on 2 dollars? How much on 3 dollars? How much on 7 dollars? How much on 10 dollars?

109. A man, failing in trade, is able to pay only 9 shillings on a pound; how much would he pay on a debt of 2 pounds? How much on 3 pounds? How much on 12 pounds?

110. A man, failing in trade, is able to pay only 4 shillings and 7 pence on a dollar; how much would he pay on a debt of 7 dollars?

111. If 6 dollars' worth of provision will serve 3 men 5 days, how many days will it serve 1 man; How many days will it serve 2 men? How many days will it serve 8 men? 112. If 10 dollars' worth of provision will serve 7 men 4 days, how many days will it serve 9 men? 113. If 12 dollars' worth of provision will serve 5

men 3 days, how many men would it serve 1 day? How many 2 days? How many 8 days? 114. If 11 dollars' worth of provision will serve 6 men 8 days, how many men will it serve 5 days? 115. If 8 dollars' worth of provision will serve 7

men 5 days, how many days would 16 dollars' worth of provision last 4 men?

of provision last 4 men? 116. If 1 peck of wheat afford 12 ten-penny loaves, how many penny loaves may be obtained from it? How many two-penny loaves? How many three-penny loaves? How many seven-penny loaves? 117. If 1 peck of wheat afford 11 eight-penny loaves, how many ten-penny loaves will it afford? 118. A man having hired some men and some boys, agreed to give each man 3 shillings, and each boy 2 shillings; how much would it take to pay a man and a boy? How much 2 men and 2 boys? How much 7 men and 7 hows? men and 7 boys?

119. A man having 18 shillings to pay among his laborers, would give to every man 2 shillings, and to every boy 1 shilling; the number of men and boys

was equal; how many were there of each? 120. A gentleman having 50 shillings to pay among his laborers, would give to every man 8 pence, and to every boy 4 pence; the number of men and boys was equal ; how many were there of each? 121. Two men bought a bushel of corn ; one gave 1

shilling, the other 2 shillings ; what part of the whole did each pay? What part of the corn must each have?

122. Two men bought a barrel of flour for 8 dollars; one gave 3 dollars, the other 5 dollars; what part did each pay? and what part must each have? 123. Three men, A, B, and C, hired a garden: A paid 6 dollars, B 5 dollars, and C 9 dollars; how much did they all pay? What part of the whole did each pay? They sold the produce for 40 dollars; what part of it must each have? What did each one's share amount to?

124. Three men bought a lottery ticket for 10 dollars; the first gave 3 dollars, the second 5 dollars, and the third 2 dollars. They drew a prize of 120 dollars. What was each man's share?

125. Two men hired a pasture for 58 dollars; one put in 7 horses, and the other 3 horses; what ought each to pay?

each to pay? 126. Three men commenced trade together; they put in money in the following proportion: the first, 3 dollars, as often as the second put in 4, and as often as the third put in 5; they gained 87 dollars; what was each man's share of the gain?

127. Two men hired a pasture for 32 dollars; the first put in 3 sheep for 4 months, the second put in 4 sheep for 5 months; how much ought each to pay? *Note.* Three sheep for 4 months is the same as 12

Note. Three sheep for 4 months is the same as 12 sheep for 1 month, 4 sheep for 5 months is the same as 20 sheep for 1 month. This question is therefore the same as if 1 man put in 12 sheep, and the other 20 sheep.

128. Two men, A and B, traded in company; A put in 1 dollar for 4 months, and B 2 dollars for 3 months, and they gained ninety cents; how many cents must each have?

129. Three men, A, B, and C, traded in company; and put in money in the following proportions: A put in 4 dollars as often as B put in 3, and as often as C put in 2; A's money was in 2 months, B's 3 months, and C's 4 months, and they gained 100 dollars; what was each one's share?

130. Two men, A and B, traded in company; A

put in 2 dollars as often as B put in 3; A's money was employed 7 months, and B's money 5 months; they gained 58 dollars; what was each man's share of the gain?

131. Three men, A, B, and C, traded in company, and put in money in the following proportions: A put in 2 dollars as often as B put in 4, and as often as C put in 6. B's money was in twice as long as C's, and A's two times as long as B's: they gained 88 dollars; what was each one's share of the gain?

Note. Interest is a reward or premium allowed by a debtor to a creditor for the use of money. The usual interest for 1 year, and that which is established by law in twenty-two of the States of this Union, is 6 cents on a dollar, 6 dollars on a hundred dollars, or in fine  $\frac{1}{700}$  of the sum whatever be the denomination. It is called 6 per cent., that is 6 on the hundred, because it is always reckoned by the hundred. So 3 per cent., 4 per cent., &c., signify  $\frac{3}{100}$ ,  $\frac{1}{100}$ , &c., or so much on the hundred. The teacher can vary the examples to illustrate the different rates per cent.

132. The interest of 1 dollar being 6 cents for 1 year, what is the interest of 7 dollars for the same time? What is the interest of 10 dollars? Of 15 dollars? Of 20 dollars? Of 30 dollars? Of 50 dollars? Of 75 dollars? Of 100 dollars? Of 118 dollars?

133. If the interest of 1 dollar is 6 cents for 1 year, what would it be for 2 years? What would be the interest of 8 dollars for two years? Of 17 dollars? Of 43 dollars?

134. If the interest of 100 dollars is 6 dollars for a year, what would be the interest of 50 dollars for the same time? Of 2 hundred? Of 3 hundred? Of 4 hundred? Of 1 hundred and 50? Of 2 hundred and 50?

135. If the interest of 100 dollars is 6 dollars for

1 year, what would be the interest of it for 6 months? For 3 months? For 4 months? For 8 months? For 9 months? For 1 month? For 2 months? For 5 months? For 7 months? For 10 months? For 11 months?

136. What is the interest of 100 and 32 dollars for 2 years, at 6 per cent.?

137. What is the interest of 300 dollars for 1 year and 6 months, at 6 per cent.?

138. What is the interest of 1 dollar for 6 months at 6 per cent.? What for 2 months? What for 1 month? What for 3 months? 4 months? 5 months? 7 months? 9 months? 11 months?

139. What is the interest of 57 dollars for 1 year and 7 months, at 6 per cent.?

140. What is the interest of 200 and 67 dollars for 1 year and 4 months, at 6 per cent.?

141. If the interest of 1 year is 6 per cent., what would be the per cent. for 2 years? For 3 years? For 6 months? For 2 months? For 1 month? For 4 months? For 5 months? For 7 months? For 8 months? For 9 months?

142. If the interest of 2 months or 60 days is 1 per cent., what would be the per cent. for 20 days? What for 40 days? What for 15 days? What for 45 days? What for 12 days? What for 10 days? What for 5 days?

143. What is the interest of 100 and 37 dollars for 2 years 3 months and 20 days?

144. A can do a piece of work in 2 days; how much of it can he do in 1 day?

145. B can do a piece of work in 4 days; how much of it can he do in 1 day?

146. If A can do  $\frac{1}{2}$  of a piece of work in 1 day, and B can do  $\frac{1}{4}$  of it in 1 day, how much would both do in a day? How long would it take them both together to do the whole? 147. If 1 man can do a piece of work in 2 days and another in 3 days, how much of it would each do in a day? How much would both together do? How long would it take them both to do the whole? 148. A cistern has 2 pipes; the first will fill it in 3 hours, the second in 6 hours; how much of it

148. A cistern has 2 pipes; the first will fill it in 3 hours, the second in 6 hours; how much of it would each fill in an hour? How much would both together fill? How long would it take them both to fill it?

149. A man and his wife found by experience, that, when they were both together, a bushel of meal would last them only 2 weeks; but when the man was gone, it would last his wife 5 weeks; how much of it did both together consume in 1 week? What part did the woman alone consume in 1 week? What part did the man alone consume in 1 week? How long would it last the man alone?

150. If 1 man could build a piece of wall in 5 days, and another man could do it in 7 days; how much of it would each do in 1 day? How many days would it take them both to do it?

151. A cistern has 3 pipes; the first would fill it in 3 hours; the second in 6 hours: the third in 4 hours; what part of the whole would each fill in 1 hour? and how long would it take them all to fill it, if they were all running at once?

152. A and B together can build a boat in 8 days, and with the assistance of C they can do it in 5 days; how much of it can A and B build in 1 day? How much of it can A, B, and C, build in 1 day? How much of it can C build alone in 1 day? How long would it take C to build it alone?

153. Suppose I would line 8 yards of broadcloth that is 1½ yards wide, with shalloon that is 3 of a yard wide; how many yards of the shalloon will line 1 yard of the broadcloth? How many yards will line the whole?
154. If 7 yards of cloth cost 13 dollars, what will 10 yards cost?

155. If the wages of 25 weeks come to 75 dollars, what will be the wages of 7 weeks? 156. If 8 tons of hay will keep 7 horses three

156. If 8 tons of hay will keep 7 horses three months, how much will keep 12 horses the same time?

157. If a staff 4 feet long cast a shadow 6 feet long, what is the length of a pole that casts a shadow 58 feet at the same time of day?

158. If a stick 8 feet long cast a shadow 2 feet in length, what is the height of a tree which casts a shadow 42 feet at the same time of day?

159. At 6 dollars per week, how many months' board can I have for 100 dollars? 160. A ship has sailed 24 miles in 4 hours; how

160. A ship has sailed 24 miles in 4 hours; how long will it take her to sail 150 miles at the same rate?

161. 30 men can perform a piece of work in 20 days; how many men will it take to perform the same work in 8 days?

162. 17 men can perform a piece of work in 25 days; in how many days would 5 men perform the same work?

163. A hare has 76 rods the start of a greyhound, but the greyhound runs 15 rods to 10 of the hare; how many rods must the greyhound run to overtake the hare?

164. A garrison has provision for 8 months, at the rate of 15 ounces per day; how much must be allowed per day, in order that the provision may last 11 months?

165. If 8 men can build a wall 15 rods in length in 10 days, how many men will it take to build a wall 45 rods in length in 5 days?

166. If a quarter of wheat affords 60 ten-penny loaves, how many eight-penny loaves may be obtained from it? 167. Said Harry to Dick, My purse and money together are worth 16 dollars, but the money is worth 7 times as much as the purse; how much money was there in the purse? and what is the value of the purse?

168. A man being asked the price of his horse, answered, that his horse and saddle together were worth 100 dollars, but the horse was worth 9 times as much as the saddle; what was each worth?

169. A man having a horse, a cow, and a sheep, was asked what was the value of each. He answered, that the cow was worth twice as much as the sheep, and the horse 3 times as much as the sheep, and that all together were worth 60 dollars; what was the value of each?

170. A man bought an apple, an orange, and a melon, for 21 cents; for the orange he gave twice as much as for the apple, and for the melon he gave twice as much as for the orange; how much did he give for each?

171. If 80 dollars' worth of provision will serve 20 men 24 days, how many days will 100 dollars' worth of provision serve 30 men?

172. There is a pole  $\frac{1}{2}$  and  $\frac{1}{3}$  under water, and 10 feet out; how long is the pole?

173. In an orchard of fruit trees,  $\frac{1}{2}$  of them bear apples,  $\frac{1}{4}$  of them bear plums,  $\frac{1}{5}$  of them pears, 7 of them peaches, and 3 of them cherries; how many trees are there in the whole, and how many of each sort?

174. A farmer being asked how many sheep he had, answered, that he had them in 4 pastures; in the first he had  $\frac{1}{3}$  of his flock; in the second  $\frac{1}{4}$ ; in the third  $\frac{1}{6}$ ; and in the fourth 15; how many sheep had he?

175. A man driving his geese to market, was met by another, who said, Good-morrow, master, with your hundred geese; says he, I have not a hundred; but if I had half as many more as I now have, and two geese and a half, I should have a hundred; how many had he?

176. What number is that, to which if its half be added the sum will be 60?

177. What number is that, to which if its third be added the sum will be 48?

178. What number is that, to which if its fifth be added the sum will be 54?

179. What number is that, to which if its half and its third be added the sum will be 55?

180. A man being asked his age, answered, that if its half and its third were added to it, the sum would be 77; what was his age?

181. What number is that which being increased by its half, its fourth, and eighteen more, will be doubled?

182. A boy being asked his age, answered, that if  $\frac{1}{2}$  and  $\frac{1}{4}$  of his age, and 20 more, were added to his age, the sum would be 3 times his age. What was his age?

183. A man being asked how many sheep he had, answered, that if he had as many more,  $\frac{1}{2}$  as many more, and  $2\frac{1}{2}$  sheep, he should have 100. How many had he?

EXPLANATION OF THE TABLES. — These Tables are designed not for study, but for an accompanying exercise to the usual recitation. By their use, many words will be saved, as the teacher will not be obliged to ask the questions; and hence more can be accomplished in a given time. By substituting and for times and in. Addition can also be reviewed; by substituting from, and mentioning the smaller number first, Subtraction. In

## Sect. 15.]

many ways can the tables be used to advantage. The columns can be added, or the numbers added across the tables. The divisor of one number can be subtracted from the dividend of another, or the dividend of one number can be divided by the divisor of another. For example, take Nos. 1 and 7: 11 from 70, 4 from 27, 10 from 121, 3 from 16; or 11, in 70, 4 in 27, 10 in 121, 3 in 16.

143

# PART II.

## KEY.

THE Key contains remarks on the principles employed and illustrations of the manner of solving the examples is each section. All the most difficult of the practical examples are solved in such a manner as to show the principles by which they are performed.

Instructors who may never have attended to fractions need not be afraid to undertake to teach this book. The author flatters himself that the principles are so illustrated, and the processes are made so simple, that any one, who shall undertake to teach it, will find himself familiar with fractions before he is aware of it, although he knew nothing of them before; and that every one will acquire a facility in solving questions which he never before possessed.

The reasoning used in performing these small examples is precisely the same as that used upon large ones. And when any one finds a difficulty in solving a question, he will remove it much sooner, and much more effectually, by taking a very small example of the same kind, and observing how he does it, than by recurring to a rule.

The practical examples at the commencement of each section and article are generally such as to show the pupil what the combination is, and how he is to perform it. Thus the pupil will learn gradually to reason upon abstract numbers. In each combination, there are a few abstract examples without practical ones, to exercise the pupil in the combinations, after he knows what these combinations are. It would be an excellent exercise for the pupil to put these into a practical form when he is reciting. For instance, when the question is, How many are 5 and 3? Let him make a question in this way: if an orange cost 5 cents, and an apple 3 cents, what would they both come to? This may be done in all cases.

The examples are often so arranged, that several depend on each other, so that the preceding explains the following one. Sometimes, also, in the same example, there are several questions asked, so as to lead the pupil gradually from the simple to the more difficult. It would be well for the pupil to acquire the habit of doing this for himself, when difficult questions occur.

The operations can be illustrated by counters, or marks on the blackboard, according to the necessity of the pupils.

The book may be used in classes where it is convenient. A very useful mode of recitation is for the instructor to read the example to the whole class, and then, allowing sufficient time for them to perform the question, call upon some one to answer it. In this manner every pupil will be obliged to perform the example, because they dó not know who is to answer it. In this way it will be best for them to answer without the book.

It will often be well, to let the elder pupils hear the younger. This will be a useful exercise for them, and an assistance to the instructor.

#### SECTION I.

A. THIS section contains addition and subtraction. The first example may be solved by means of beans, peas, &c., or by means of the blackboard. The former method is preferable, if the pupil be very young, not only by the examples in the first part of this section, but by the first examples in all the sections.

B & C. The articles B and C contain the common addition table as far as the first 10 numbers. In the first, the numbers are placed in order; and in the second, out of order.

The pupil should study these until he can find the answers readily, and then he should commit the answers to memory.

### KEY.

D. In this article the numbers are larger than in the preceding; and, in some instances, three or more numbers are added together. In the abstract examples, the numbers from one to ten are to be added to the numbers from ten to twenty.

E. This article contains subtraction.

F. This article is intended to make the pupil familiar with adding the first nine numbers to all others. The pupil should study it until he can answer the questions very readily.

G. In this article all the preceding are combined together, and the numbers from 1 to 10\* are added to all numbers from 20 to 100, and subtracted in the same manner.

H. This article contains practical questions which show the application of all the preceding articles.

6. 37 less 5 are 32, less 8 are 24, less 6 (which he kept himself) are 18; consequently he gave 18 to the third boy.

After this section use the tables on pp. 144 and 145 for review of Addition and Subtraction.

## SECTION II.

THIS section contains multiplication. The pupil will see no difference between this and addition. It is best that he should not at first, though it may be well to explain it to him after a while.

A. This article contains practical questions, which the pupil will readily answer.

1. Three yards will cost 3 times as much as 1 yard.

N. B. Be careful to make the pupil give a similar reason for multiplication, both in this article, and elsewhere.

11. A man will travel 4 times as far in 4 hours as he will in 1 hour.

\* Figures are used in the key, because the instructor is supposed to be acquainted with them. They are not used in the first part of the book, because the pupil would not understand them so well as he will the words. **B.** This article contains the common multiplication table, as far as the product of the first ten numbers. The pupil should find the answers once or twice through, until he can find them readily, and then let him commit them to memory.

C. This article is the same as the preceding, except in this, the numbers are out of their natural order.

D. In this article multiplication is applied to practical examples. They are of the same kind as those in article A of this section.

12. There are 8 times as many squares in 8 rows as in 1 row. 8 times 8 are 64.

23. There are 3 times as many pints in 3 quarts as in 1 quart. 3 times 2 are 6. And in 6 pints there are 6 times 4 gills, or 24 gills.

35. In one gallon are 32 gills; and 32 times 2 cents are 64 cents. Or, 1 pint will cost 8 cents, and there are 8 pints in a gallon. 8 times 8 are 64.

38. They will be 2 miles apart in 1 hour, 4 miles in 2 hours, &c.

After this section make use of the table on page 144.

## SECTION III.

A. THIS section contains division. The pupil will scarcely distinguish it from multiplication. It is not important that he should at first.

The pupil will be able to answer these questions by the multiplication table, if he has committed it to memory thoroughly.

B. In this article the pupil obtains the first ideas of fractions, and learns the most important of the terms which are applied to fractions.\* The pupil has already been accustomed to look upon a collection of units, as forming a number, or as being itself a part of another number. He knows, therefore, that one is a part of every number, and that every number is a part of every number larger than

\* As soon as the terms applied to fractions are fully comprehended, the operations on them are as simple as those on whole numbers. itself. As every number may have a variety of parts, it is necessary to give names to the different parts in order to distinguish them from each other. The parts receive their names, according to the number of parts which any number is divided into. If the number is divided into two equal parts, the parts are called halves; if it is divided into three equal parts, they are called thirds; if into four parts, fourths, &c.; and having divided a number into parts, we can take as many of the parts as we choose. If a number be divided into five equal parts, and three of the parts be taken, the fraction is called *three fifths* of the number. The *name* shows at once into how many parts the number is to be divided, and how many parts are taken.

is to be divided, and how many parts are taken. The examples in this book are so arranged that the names will usually show the pupil how the operation is to be performed. In this section, although the pupil is taught to divide numbers into various parts, he is not taught to notice any fractions, except those where the numbers are divided into their simple units, which is the most simple kind.

It will be best to use beans, pebbles, &c., first.

20. Since 1 is 1 third of 3, 2 must be 2 thirds of 3.

34. Illustrate by grouping the marks or counters by threes.

Proceed in the same manner with the other divisions.

This being one of the most useful combinations, and one but very little understood by most people, especially when applied to large numbers, the pupil must be made perfectly familiar with it. Ask questions like those in the book for large numbers, and also some like the following: What part of 7 is 18? the answer will be  $\sqrt[3]{2}$ .

C. The first ten figures are here explained. They are used as an abridged method of writing numbers, and not with any reference to their use in calculating.

This article is only a continuation of the last. All the numbers from 1 to 100 are introduced into the two articles, and are divided by all the numbers from 1 to 10; except that some of the largest are not divided by some of the smallest.

D. These examples, which are similar to those in article A of this section, are solved in the same manner.

## KEY.

5. It would take as many hours, as 3 miles are contained in 10 miles. 3 hours and  $\frac{1}{3}$  of an hour.

20. They cost as many cents as there are 3 apples in 30 apples; that is, 10 cents.

26. The whole loss was 35 dollars, which was 7 dollars apiece.

After this section use the table on page 145.

### SECTION IV.

A. THIS article contains multiplication simply. It is repeating a number a certain number of times and a part of another time.

14. 6 times 5 are 30, and  $\frac{2}{5}$  of 5 are 3, which added to 30 make 33.

B. In this article the pupil is taught to change a certain number of twos into threes, threes into fives, &c. This article combines all the preceding operations.

24. 4 cords of wood will cost 28 dollars, and  $\frac{2}{9}$  of a cord will cost 2 dollars, which makes 30 dollars. 30 dollars will buy 3 hundred-weight of sugar and  $\frac{6}{9}$  of another hundred-weight.

C. 2. The two lemons come to 8 cents, and 8 cents will buy 4 apples, at 2 cents apiece.

This is usually called Barter. The general principle is to find what the article will come to, whose price and quantity are given, and then to find how much of the other article that money will buy.

6. If 2 apples cost 4 cents, 1 will cost 2 cents, and 4 will cost 8 cents.

22. Find how many times 2 pears are contained in 20 pears, which is 10 times. 10 times 3 cents are 30 cents. Or, first find what 20 pears would come to at 3 cents apiece; and since it-is 2 for 3 cents, instead of 1 for 3 cents the price will be half as much.

23. See how many times you can have 5 cents in 30 cents, and you can buy so many times 3 eggs

26. 5 dollars apiece.

### SECTION V.

In this section the principle of fractions is applied to larger numbers, but such as are divisible into the parts proposed to be taken. The pupil, who is familiar with what precedes, will easily understand the examples in this section. They require nothing but division and multiplication.

A. Let the pupil explain each example in the following manner. What is 1 sixth of 18? Ans. 3. Why? Because 6 times 3 are 18; therefore if you divide 18 into 6 equal parts, one of the parts will be 3.

The pupil will be very likely to say 3 is the 6th part of 18, because 3 times 6 are 18. Be careful to make him say it the other way, viz., 6 times 3 are 18.

B. 11.  $\frac{1}{6}$  of 20 is 4;  $\frac{7}{4}$  are 7 times 4, or 28; and 28 is 4 times 6, and  $\frac{4}{4}$  of 6.

C. 3. 1 half of 10 is 5, 2 of ten are 4; 5 and 4 are 9. He gave away 9, and had 1 left.

5. 2 yards will cost 1 half of what 4 cost; or 6 dollars.

7. 2 is  $\frac{2}{3}$  of 3; therefore 2 oranges will cost  $\frac{2}{3}$  of what 3 cost.  $\frac{2}{3}$  of 18 cents are 12 cents.

8. 4 of 25 are 20. The ten apples cost 20 cents, which was 2 cents apiece.

13. 3 is <sup>4</sup>/<sub>4</sub> of 4. <sup>4</sup>/<sub>7</sub> of 12 dollars are 9 dollars. Or 4 yards at 12 dollars is 3 dollars a yard, and 9 dollars for 3 yards

15. Since 1 is  $\frac{1}{3}$  of 3, 7 is  $\frac{7}{3}$  of 3.  $\frac{7}{3}$  of 15 cents are 35 cents. Or, 3 oranges at 15 cents, is 5 cents apiece : 7 times 5 cents are 35 cents.

Note. In questions of this kind it is generally the simplest way to find what 1 article will cost, then it may easily be told how much any number will cost.

#### SECTION VI.

A. 4. 2 halves of any number make the whole number Therefore 2 is 1 half of 2 times 2; or 4. It is  $\frac{1}{4}$  of 4 times 2, or 8.

Let the pupil answer these questions in the following manner: 4 is  $\frac{1}{3}$  of 3 times 4; 3 times 4 are 12. 5 is  $\frac{1}{7}$  of 7 times 5; 7 times 5 are 35.

**B.** 2. 4 is 2 times 2.

16. 2 thirds of any number is twice as much as  $\frac{1}{4}$  of the same number. If 4 is  $\frac{2}{3}$  of some number, then 1 half of 4 or 2 is  $\frac{1}{4}$  of that number; 2 is  $\frac{1}{2}$  of 6; therefore 4 is  $\frac{2}{3}$  of 6.

23. It is evident that  $\frac{1}{4}$  of a pound will cost only  $\frac{1}{4}$  of what  $\frac{3}{4}$  will cost. If  $\frac{3}{4}$  cost 6 cents,  $\frac{1}{4}$  will cost 2 cents, and the whole pound 14 cents.

26. It will probably be perceived by this time, that  $\frac{2}{4}$  of a number being given, it is necessary to find  $\frac{1}{4}$ , and then the number is easily found; 4 being  $\frac{2}{4}$ , 2 is  $\frac{1}{4}$ , and 2 is  $\frac{1}{4}$  of 14.

45. 24 being \$, \$ of 24 or 3 will be \$; 3 is \$ of 27.

C. 6. 20 being  $\frac{4}{5}$ , 5 is  $\frac{1}{7}$ , and 5 is  $\frac{1}{7}$  of 35; and 35 is 5 times 6, and  $\frac{4}{5}$  of 6.

D. 4. 18 is 3 times 6, and 6 is  $\frac{1}{4}$  of 4 times 6, or 24. Ans. 24 dollars.

6. 54 is § of 48; 12 yards at 48 dollars is 4 dollars a yard. He gained 6 dollars.

7. 10 feet is 2 of 15 feet.

8. If  $\frac{2}{3}$  are under water, there must be  $\frac{1}{3}$  out of the water.  $4 \text{ is } \frac{1}{3} \text{ of } 12$ .

10. § and § are §. § bear cherries and peaches; consequently, the 10 which bear plums must be the other §. 10 is § of 35. 10 bear peaches, and 15 bear cherries.

## Miscellaneous Examples.

6. The greyhound gains upon the fox 4 rods in a minute. It will take him 20 minutes to gain 80 rods.

8.  $\frac{8}{5}$  of 24. Or you may say, 1 sheep would cost 3 dollars, and 3 sheep 9 dollars.

9. 30 horses will eat 10 times as much as 3 horses.

12. 5 dollars for 1 week, 20 dollars for a month, and 25 dollars for five weeks.

14. It would take them 5 times as long to eat 40 bushels, as it would to eat 8 bushels.

15. 4 horses would eat 4 bushels in 3 days, and it would take them 9 times as long to eat 36 bushels. Ans. 27 days.

16. If 2 men spend 12 dollars in 1 week, 1 man will pend 6 dollars in 1 week, and 30 dollars in 5 weeks, and 3 men would spend 3 times as much, or 90 dollars.

17. The shadow of the staff is 3 of the length of the

#### KEY.

staff, therefore the shadow of the pole must be  $\frac{2}{3}$  the length of the pole. 18 feet is  $\frac{2}{3}$  of 27 feet.

20. It would take 2 men 3 times as long to do it as it would 6 men.

23. 8 men would do a piece of work 1 half as large in 2 days, and it would take 2 men 4 times as long to do it, or 8 days.

28. He must sell it for 56 dollars in order to gain 16 dollars. 56 dollars is 7 dollars per barrel.

29. It cost him 35 dollars, and he must sell it for 45 to gain 10 dollars; 45 dollars is 9 dollars a firkin.

30. Ans. 56 cents. See Section VI.

33. If it would last 3 men 10 months, it would last 1 man 30 months, and 5 men 6 months.

34. There are 8 times 5 in 40; and since the other would build as many times 9 as the first does 5, he would build 8 times 9 or 72 rods.

## SECTION VII.

A. 13.  $\frac{1}{5}$  of 20 is 4,  $\frac{4}{5}$  are 16; 16 being  $\frac{8}{7}$ , 2 is  $\frac{1}{7}$ ; 2 is  $\frac{1}{7}$  of 14, and 16 is  $\frac{8}{7}$  of 14.

16.  $\frac{2}{5}$  of 28 are 12; 12 is 2 times 6, and 6 is  $\frac{1}{5}$  of 48 (12 is  $\frac{2}{5}$  of 48), and 48 is 6 times seven and  $\frac{2}{5}$  of 7.

B. 1.  $\frac{4}{5}$  of 15 are 12; 12 is 6 times 2; 2 is  $\frac{1}{10}$  of 20 (12 is  $\frac{6}{10}$  of 20);  $\frac{1}{8}$  of 21 is 7; 20 is 2 times 7 and  $\frac{6}{7}$  of 7.

2. \$ of 18 are 24; 24 is \$ of 27; \$ of 35 is 5; 27 is 5 times 5 and \$ of 5.

C. This article contains the multiplication table, in which the numbers from 10 to 20 are multiplied by the ten first numbers.

## SECTION VIII.

A. 1. In one there are 2 halves; in 2 there are twice as many halves, that is 4 halves, or  $\frac{4}{2}$ .

2. In one there are 2 halves, in 3 there are three times two halves, that is, 6 halves, or §.

3. In one there are 3 thirds, in 2 there are twice 3 thirds, that is, 6 thirds, or §.

15. Draw two lines on the board thus \_\_\_\_\_. Each line eall one; divide the upper line into two equal parts, each part is one half of one, or one half; divide the lower line in the same way, and then call for the answer. The form of the question may be varied by asking how many half apples there are in two apples.

37. In 5 and 2 thirds, how many thirds? Draw five parallel equal lines, divide them into thirds, and draw another parallel with the others and two thirds as long, let the scholar count the thirds. In all these cases of illustration on the board, it is presumed that the scholar will soon take the hint, and devise illustrations for himself at his seat.

### SECTION IX.

A. 2.  $\frac{1}{3}$  signifies that 1 thing is divided into 3 equal parts, and 1 part taken. Therefore 2 times 1 third is 2 parts, or  $\frac{2}{3}$ .

6. 7 times 1 is 7, or 21.

B. 4. 4 times 2 are 8, and 4 times 1 half are 4 halves, or 2, which added to 8 make 10.

18. 4 times 3 are 12, and 4 times  $\frac{3}{4}$  are  $\frac{12}{4}$ , or three whole ones, which added to 12 make 15.

40. 10 barrels at 3 dollars and  $\frac{5}{6}$  a barrel; 10 barrels at 3 dollars, would be 30 dollars, then 10 times  $\frac{5}{6}$  is  $\frac{50}{6}$ , or 8 and  $\frac{2}{6}$  of a dollar. Ans. 382 dollars.

C. 2.  $\frac{9}{4}$  to each would be 3 times  $\frac{9}{4}$ , or  $\frac{9}{4}$ , which are  $2\frac{1}{4}$  oranges.

3.  $\frac{10}{5}$  or 2 bushels.

4. 7 times  $\frac{3}{4}$  are  $\frac{21}{4}$ , or  $5\frac{1}{4}$  gallons.

5. 8 yards and § or two yards, that is 10 yards.

6. 4 times 2 are 8, and 4 times  $\frac{3}{5}$  are  $\frac{12}{5}$ , or  $2\frac{2}{5}$ , which added to 8 make 10 $\frac{2}{5}$  bushels.

12. It would take 1 man 3 times as long as it would 3 men. Ans.  $13\frac{4}{5}$  days.

14. 3 men would build 3 times as much as 1 man; and in 4 days they would build 4 times as much as in 1 day. Ans. 38<sup>§</sup> rods.

## SECTION X.

A. 21.  $\frac{1}{3}$  of 1 is  $\frac{1}{2}$ .  $\frac{1}{2}$  of 2 is 2 times as much, or  $\frac{2}{3}$ .  $\frac{1}{3}$  of 4 is  $\frac{4}{3}$ , or  $1\frac{1}{3}$ .  $\frac{1}{3}$  of 5 is  $\frac{6}{3}$ , or  $1\frac{2}{3}$ .  $\frac{1}{3}$  of 6 is  $\frac{6}{3}$ , or 2 f of 7 is 1, or 21.

27. 1 of 1 is 1. 1 of 2 is 2. 1 of 3 is 2. 1 of 7 is 7, or 12. This manner of reasoning may be applied to any number. To find 1 of 38: it is 38, for 1 of 38 is 38 times as much as 1 of 1, and 1 of 1 is 1, consequently 1 of 38 is \$\$, and 38 is 58.

40. To find  $\frac{2}{3}$  of a number,  $\frac{1}{3}$  must be found first, and then 2 will be 2 times as much.

74. 1 of 50 is 50, or 55; 4 is 4 times as much; 4 times 5 are 20, 4 times § are 20, or 28, which added to 20 make 223.

Note. The manner employed in example 40th is best for small numbers, and that in the 74th for large numbers.

B. 2. Ans.  $1\frac{2}{5}$  apiece. 3.  $\frac{1}{5}$  of 3 is  $\frac{2}{5}$ ;  $\frac{2}{5}$  of a bushel apiece.

4. § of 7 is 41; he gave away 41, and kept 24.

7. 1 of 7 is 1, or 12; 2 of a dollar is 2 of 100 cents, which is 40 cents. Ans. 1 dollar and 40 cents a bushel. 8.  $\frac{1}{6}$  of 8 is 1 $\frac{2}{6}$ .  $\frac{2}{6}$  of 100 is 33 $\frac{2}{6}$ .

9. If 3 bushels cost 8 dollars, 1 bushel will cost 2 dollars and 2, and 2 bushels will cost 51 dollars.

13. If 7 pounds cost 40 cents, 1 will cost 55 cents; 10 pounds will cost 574 cents.

16. 1 pipe would empty it in 6 hours, and 7 pipes would empty it in 1 of 6 hours, or \$ of 1 hour, which is \$ of 60 minutes; \$ of 60 minutes is 51\$ minutes.

#### SECTION XI.

A. 2. 2 halves of a number make the number, consequently 1 and 1 half is the half of 2 times 1 and 1 half, which is 3.

15. 48 is 1 of 5 times 4 and 8, which is 221.

B. 4. 5 is 3 times  $\frac{1}{2}$  of 5, which is  $\frac{5}{2}$ , or 1 $\frac{2}{3}$ .

30. If 8 is \$ of some number, \$ of 8 is \$ of the same

## KEY.

number.  $\frac{1}{3}$  of 8 is  $2\frac{2}{3}$ ,  $2\frac{2}{3}$  is  $\frac{1}{4}$  of 4 times  $2\frac{2}{3}$  which is  $10\frac{2}{3}$ ; therefore 8 is  $\frac{3}{4}$  of  $10\frac{2}{3}$ .

52. If  $\frac{5}{2}$  of a ton cost 23 dollars,  $\frac{1}{3}$  of a ton must be  $\frac{1}{2}$  of 23, that is  $4\frac{3}{2}$  dollars, and the whole would cost 9 times as much, that is,  $41\frac{2}{3}$ .

69.  $\frac{1}{6}$  of 65 is  $\frac{7}{6}$ ;  $7\frac{2}{6}$  is  $\frac{1}{6}$  of 5 times  $7\frac{2}{6}$ , which is  $36\frac{1}{6}$ . 65 is  $\frac{2}{6}$  of  $36\frac{1}{6}$ .

C. 4. 37 is  $\frac{9}{5}$  of  $32\frac{9}{5}$ , which taken from 37 leaves  $4\frac{1}{5}$ . Ans.  $4\frac{1}{6}$  dollars.

5. 7 feet must be  $\frac{2}{5}$  of the whole pole.

6. If he lost  $\frac{2}{3}$ , he must have sold it for  $\frac{1}{4}$  of what it cost. 47 is  $\frac{1}{4}$  of  $60\frac{3}{4}$ . Ans. 60 dollars and  $42\frac{6}{3}$  cents.

## Miscellaneous Examples.

1. The shadow of the staff is  $\frac{4}{5}$  of the length of the staff; therefore the shadow of the pole is  $\frac{4}{5}$  of the length of the pole. 67 is  $\frac{4}{5}$  of  $83\frac{3}{4}$ . Ans.  $83\frac{3}{4}$  feet.

2. 9 gallons remain in the cistern in 1 hour. It will be filled in 10 hours and  $\frac{7}{6}$ ;  $\frac{7}{6}$  of 60 minutes are 46 minutes and  $\frac{6}{6}$ ;  $\frac{6}{5}$  of 60 seconds are 40 seconds. Ans. 10 hours, 46 minutes, 40 seconds.

10. Find 2 of 33, and subtract it from 17. Ans. 34.

11. It will take 3 times 10 yards.

13. 5 is  $\frac{5}{2}$  of 3; it will take  $\frac{5}{2}$  as much. Or, 7 yards, 5 quarters wide, are equal to 35 yards 1 quarter wide, which is equal to 11 $\frac{2}{3}$  yards that is 3 quarters wide.

15. § of 37 dollars.

### SECTION XII.

The examples in this section are performed in precisely the same manner as those in the sections to which they refer. All the difficulty consists in comprehending, that fractions expressed in figures signify the same thing as when, expressed in words. Make the pupil express them in words, and all the difficulty will vanish. Let particular attention be paid to the explanation of fractions given in the section.

VIII. A. 6. In 7 how many  $\frac{1}{6}$ ? expressed in words, is .n 7 how many sixths? Ans.  $\frac{4}{8}$ .

## KEY.

14. Reduce  $8_{10}^{8}$  to an improper fraction; that is, in 8 and 3 tenths, how many tenths. Ans. §8.

B. 8. 28 are how many times 1? That is, in 23 sev enths how many whole ones? Ans. 32.

IX. B. 3. How much is 5 times 64?' That is, how much is 5 times 6 and 4 sevenths? Ans. 324.

V. & X. 15. What is 5 of 27? That is, what is 5

eighths of 27? Ans.  $16\frac{7}{8}$ . VI. & XI. A. 8.  $7\frac{6}{3}$  is  $\frac{1}{8}$  of what number? That is, 7 and 6 sevenths is 1 eighth of what number? Ans. 62\$.

## SECTION XIII.

THE operations in this section are the reducing of fractions to a common denominator, and the addition and subtraction of fractions. The examples will generally show what is to be done, and how it is to be done.

4. It will readily be seen that  $\frac{1}{4}$  and  $\frac{1}{4}$  are  $\frac{3}{4}$ .

25. In the fourth square of the second row, it will be seen that 1 half is \$; and in the second square of the fourth row, 1 is 2, both together make 2 and 1 make 3.

27. 3 is the same as §.

When these questions are performed in the mind, the pupil will explain them as follows. He will probably do it without assistance. Twenty twentieths make one whole one. 1 of 20 is 5, and 2 of 20 is 8, and 10 of 20 is 2;. therefore  $\frac{1}{4}$  is  $\frac{5}{20}$ ,  $\frac{2}{5}$  is  $\frac{8}{20}$ , and  $\frac{1}{10}$  is  $\frac{2}{20}$ . All the examples should be explained in the same manner.

45. One whole one is  $\frac{56}{56}$ , one eighth of  $\frac{56}{56}$  is  $\frac{7}{56}$ .  $\frac{3}{8}$  is 3 times as much, which is 21.

51. 1 half is \$, and \$ is \$, which added together make. \$.

61. <sup>2</sup>/<sub>5</sub> is <sup>3</sup>/<sub>20</sub>, <sup>3</sup>/<sub>10</sub> is <sup>6</sup>/<sub>20</sub>, <sup>1</sup>/<sub>4</sub> is <sup>5</sup>/<sub>20</sub>, which added together make 19.

67.  $\frac{2}{5}$  is  $\frac{9}{12}$ ,  $\frac{2}{5}$  is  $\frac{9}{12}$ , which added together make  $\frac{17}{12}$ ; from  $\frac{17}{12}$  take  $\frac{5}{13}$ , and there remains  $\frac{12}{12}$ , or 1.

82. It will be easily perceived that these examples do not differ from those in the first part of the section, except in the language used. They must be reduced to a common denominator, and then they may be added and subtracted as easily as whole numbers.  $\frac{2}{5}$  is  $\frac{19}{15}$ , and  $\frac{2}{5}$  is  $\frac{6}{15}$ , and both together make 19 or 11.

86 1 is 2, and 1 is 2. If 2 be taken from 2, there remains 1.

B. This article contains only a practical application of the preceding.

3. This example and some of the following contain mixed numbers, but they are quite as easy as the others. The whole numbers may be added separately, and the fractions reduced to a common denominator, and then added as in other cases, and afterwards joined to the whole numbers. 6 and 2 are 8; 1 half and 1 are 5, making in the whole 85 bushels.

C. It is difficult to find examples which will aptly illustrate this operation. It can be done more conveniently by the instructor. Whenever a fraction occurs, which may be reduced to lower terms, if it be suggested to the pupil, he will readily perceive it and do it.

#### SECTION XIV.

A. THIS section contains the division of fractions by whole numbers, and the multiplication of one fraction by another. Though these operations sometimes appear to be division, and sometimes multiplication, yet there is actually no difference in the operations.

1 and 2. 1 of 1 is 1 of the whole.

3 and 4. 1 of 1 is 1. 33. Since 1 of a share signify 3 parts of a share, it is evident that 1 of the three parts is 1 part, that is, 1.

39. 2 signify 9 pieces or parts, and it is evident that of 9 parts is 3 parts, that is, \$.

43. We cannot take 1 of 5 pieces, therefore we must take  $\frac{1}{3}$  of  $\frac{1}{6}$ , which is  $\frac{1}{18}$ , and  $\frac{5}{6}$  is 5 times as much as  $\frac{1}{6}$ , therefore  $\frac{1}{5}$  of  $\frac{5}{5}$  is  $\frac{5}{18}$ . 78.  $8\frac{2}{5}$  is  $\frac{42}{5}$ ,  $\frac{1}{5}$  of  $\frac{42}{5}$  is  $\frac{7}{5}$ .

79.  $8\frac{4}{7}$  is  $\frac{69}{7}$ ,  $\frac{1}{7}$  of  $\frac{1}{7}$  is  $\frac{1}{49}$ , consequently,  $\frac{1}{7}$  of  $\frac{69}{7}$  is  $\frac{69}{49}$ , or 111.

86. We may say  $\frac{1}{3}$  of  $8\frac{4}{5}$  is 2, and  $2\frac{4}{5}$  over, then  $2\frac{4}{5}$  is 2, and 1 of 2 is 3, hence 1 of 84 is 23.

B. 4. It would take 1 man 4 times 98, or 375 days, and 7 men would do it in 1 of that time, that is, in 518 days.

#### SECTION XV.

A. THIS section contains the divisions of whole numbers by fractions, and fractions by fractions.

1. Since there are  $\frac{6}{3}$  in 2, it is evident that he could give them to 6 boys if he gave them  $\frac{1}{3}$  apiece; but, if he gave them  $\frac{2}{3}$  apiece, he could give them to only one half as many, or 3 boys.

5. If  $\frac{1}{5}$  of a barrel would last them one month, it is evident that 4 barrels would last 20 months; but, since it takes  $\frac{2}{5}$  of a barrel, it will last them but one half as long, or 10 months.

7.  $6\frac{3}{4}$  is  $\frac{27}{7}$ . If  $\frac{1}{4}$  of a bushel would last a week,  $6\frac{3}{4}$  bushels would last 27 weeks; but, since it takes  $\frac{3}{4}$ , it will last only  $\frac{1}{4}$  of the time, or 9 weeks.

13. If he had given  $\frac{1}{2}$  of a bushel apiece, he might have given it to 17 persons; but, since he gave 3 halves apiece, he could give it to only  $\frac{1}{3}$  of that number, that is, to 5 persons, and he would have 1 bushel left, which would be  $\frac{3}{3}$  of enough for another.

31.  $4\frac{1}{5}$  is  $\frac{21}{5}$ , and  $9\frac{3}{5}$  is  $\frac{49}{5}$ . Now  $\frac{1}{5}$  is contained in  $\frac{49}{5}$ 48 times, and  $\frac{21}{5}$  is contained only  $\frac{1}{21}$  part as many times, consequently only  $2\frac{6}{5}$  or  $2\frac{2}{5}$ .

B. 1.  $\frac{1}{2}$  is  $\frac{5}{10}$ ; consequently 5 pounds can be bought for  $\frac{1}{4}$  of a dollar.

3.  $\frac{3}{4}$  is  $\frac{9}{12}$ , and  $\frac{1}{6}$  is  $\frac{2}{12}$ . If he had given only  $\frac{1}{12}$  apiece, he could have given it to 9 persons; but since he gave  $\frac{2}{12}$ , he could give it to only 1 half as many, or  $4\frac{1}{2}$  persons.

5.  $\frac{1}{7}$  is  $\frac{3}{21}$ , and  $\frac{3}{5}$  is  $\frac{14}{21}$ . If a pound had cost  $\frac{1}{21}$  of a dollar, 14 pounds could be bought for  $\frac{14}{21}$  of a dollar; but since it costs  $\frac{3}{21}$ , only  $\frac{1}{2}$  as many can be bought; that is,  $\frac{14}{2}$  pounds.

12.  $\frac{2}{5}$  is  $\frac{4}{18}$ , and  $\frac{5}{5}$  is  $\frac{15}{18}$ ;  $\frac{1}{18}$  is contained in  $\frac{15}{18}$  15 times ut  $\frac{4}{18}$  is contained only  $\frac{1}{4}$  as many times; that is,  $3\frac{3}{4}$  times

#### Miscellaneous - Examples.

5.  $\frac{2}{5}$  of a penny is  $\frac{2}{5}$  of 4 farthings. Ans.  $2\frac{2}{5}$  farthings. 7.  $\frac{2}{5}$  of 4 quarters is 2 quarters and  $\frac{2}{5}$  of a quarter;  $\frac{2}{5}$  of a quarter is  $\frac{2}{5}$  of 4 nails, which is  $1\frac{2}{5}$  nails. Ans. 2 quarters,  $1\frac{2}{5}$  nails.

14. § of 24 hours is 14 hours and § of an hour; § of 60 minutes is 24 minutes. Ans. 14 hours, 24 minutes.

## Sect. 15.]

## KEY.

28. There being 4 farthings in a penny, 1 farthing is 1 part of a penny.

31. 1 penny is  $\frac{1}{12}$  of a shilling, because there are 12 pence in a shilling.

48. 1 farthing is  $\frac{1}{48}$  of one shilling.

49. 2 farthings is  $\frac{2}{48}$ , or  $\frac{1}{24}$  of a shilling. 5 farthings is  $\frac{1}{26}$  of a shilling.

51. 1 penny is  $\frac{1}{240}$  of 1 pound. 7 pence is  $\frac{7}{240}$  of £1. 59. 3s. 5d is 41 pence, which is  $\frac{440}{240}$  of £1.

75. 1 nail is  $\frac{1}{16}$  of a yard. 5 nails is  $\frac{5}{16}$  of a yard.

100. At the end of 1 hour they would be 7 and  $\frac{4}{5}$  miles apart. In 7 hours, 7 times 7 $\frac{4}{5}$ , which is 54 $\frac{3}{5}$  miles.

121. This is the principle of fellowship; 3 shillings were paid; one paid  $\frac{1}{3}$ , the other  $\frac{2}{3}$ .

122. One paid §, the other §.

126. 3 and 4 and 5 are 12. The first put in  $\frac{8}{12}$ ; the second  $\frac{4}{12}$ ; the third  $\frac{5}{5}$ .

129. 4 dollars for 2 months is the same as 8 dollars for 1 month; 3 dollars for 3 months is the same as 9 dollars for 1 month; and 2 dollars for 4 months is the same as 8 dollars for 1 month.

131. A's money was in 4 times as long as C's. It is the same as if A had put in 8 dollars for the same time, and B 8 dollars for the same time. A must have  $\frac{8}{22}$ , B  $\frac{8}{22}$ , and C  $\frac{6}{22}$ , of 88 dollars.

139. The interest of 50 dollars for 1 year and 6 months is 4 dollars and 50 cents, and for 1 month it is 25 cents. The interest of 7 dollars for 19 months (a dollar is  $\frac{1}{2}$  of a cent a month) is  $66\frac{1}{2}$  cents. The whole amounts to 5 dollars and  $41\frac{1}{2}$  cents.

140. The interest of 200 dollars for  $1\frac{1}{5}$  years is 16 dollars. The interest of 67 dollars is 67 cents for every 2 months, for 16 months it will be 8 times 67 cents, which are 5 dollars and 36 cents. The whole interest is 21 dollars and 36 cents.

143. The interest of 100 dollars for  $2\frac{1}{4}$  years is 13 dollars and 50 cents. The interest of 100 dollars for 60 days would be 1 dollar, the interest for 20 days will be  $\frac{1}{3}$  of a dollar, or  $33\frac{1}{4}$  cents. The interest of 1 dollar for  $2\frac{1}{4}$  years is  $13\frac{1}{2}$  cents; for 10 dollars the interest would be 1 dollar and 35 cents, and for 30 dollars, 4 dollars and 5 cents. The interest of 7 dollars for  $2\frac{1}{4}$  years is  $7 \text{ times } 13\frac{1}{4}$  cents.

KEY.

or  $94\frac{1}{2}$  cents. The interest of 37 dollars for 60 days would be 37 cents, and for 20 days  $\frac{1}{3}$  of 37 cents, or  $12\frac{1}{3}$  cents. The whole interest is 18 dollars and  $95\frac{1}{4}$  cents.

146. They would both together do  $\frac{3}{4}$  of the work in 1 day, and it would take them  $\frac{1}{3}$  of a day to do the other  $\frac{1}{4}$  Ans. 1 $\frac{1}{3}$  day.

149. They both together consume  $\frac{1}{2}$  of a bushel in a week, but the woman alone consumes only  $\frac{1}{2}$  of a bushel in a week. That is, they both together consume  $\frac{1}{10}$  in a week, but the woman alone only  $\frac{1}{10}$ ; consequently, the man alone would consume  $\frac{3}{10}$ ; and a bushel would last him  $\frac{3}{1}$  weeks.

152. A and B can build  $\frac{1}{5}$  of it in 1 day; A, B, and C, can build  $\frac{1}{5}$  of it in 1 day; the difference between  $\frac{1}{5}$  and  $\frac{1}{5}$  is  $\frac{3}{40}$ ; therefore C can build  $\frac{3}{40}$  of it in 1 day; and it would take him 13 $\frac{1}{5}$  days to build it alone.

164. Find how much they might eat in a day, in order to make it last 1 month, and then it will be easy to find how much they may eat in a day, to make it last 11 months.

167. The money is 7 parts of the whole, and the purse one part; consequently the money is  $\frac{7}{6}$  and the purse  $\frac{1}{5}$  of 16.

170. He gave one part for the apple, 2 parts for the orange, and 4 parts for the melon. These make 7 parts. The apple 3 cents, the orange 6 cents, and the melon 12 cents.

175. If to a number half of itself be added, the sum is  $\frac{3}{2}$  of that number; hence subtract  $2\frac{1}{2}$  from 100, and the remainder is  $\frac{3}{2}$  of the number of geese that he had.

180. This must be reduced to 6ths. 1 half is  $\frac{2}{6}$ , and  $\frac{1}{5}$  is  $\frac{2}{3}$ , and the number itself is  $\frac{2}{5}$ . If therefore to the whole number its half and its third be added, the sum will be  $\frac{1}{5}$ ; hence, 77 is  $\frac{1}{5}$  of the number.

181.  $\frac{1}{2}$  is  $\frac{2}{4}$ ; therefore if to a number  $\frac{1}{2}$  and  $\frac{1}{4}$  of itself be added, the whole number will be  $\frac{1}{4}$ ; but when 18 more is added to  $\frac{1}{4}$ , the first number is doubled; that is, the number is  $\frac{3}{4}$  of the first number; therefore 18 is  $\frac{1}{4}$  of the number.

# PART III.

## WRITTEN ARITHMETIC.

# Notation and Numeration.

1. Instead of writing the names of numbers, it is usual to express them by particular characters, called *figures*.

One	is	writte	n 1	Twenty-six	is	writ	ten 26
Two	66	66	2	Twenty-seven	66	66	27
Three	-66	66	3	Twenty-eight	66	66	28
Four	66	- 66	4	Twenty-nine	66	66	29
Five	66	66 -	5	Thirty	66	66	30
Six	66	66	6	Thirty-one	66	66	31
Seven	66	66	7	Forty	66	66	40
Eight	66	66	8	Fifty	66	66	50
Nine	66	66	9	Sixty	66	66	60
Ten	66	66	10	Seventy	66	66	70
Eleven	66	66	11	Eighty	66	66	80
Twelve	66	66	12	Ninety	66	66	90
Thirteen	66	66	13	One hundred	66	66	100
Fourteen	66	66	14	One hundred			
Fifteen	66	66	15	and one	66	66	101
Sixteen	66	66	16	One hundred			
Seventeen	66	66	17	and two	66	66	102
Eighteen	66	66	18	One hundred			
Nineteen	66	66	19	and ten	66	66	110
Twenty	66	66	20	One hundred			
<b>F</b> wenty-one	66	66	21	and twenty	66	66	120
Twenty-two	66	66	22	Two hundred	66	66	200
Twenty-three	66	66	23	Three hundred	66	66	300
Twenty-four	66	66	24	One thousand	66	66	1000
Twenty-five	66	66	25	Ten thousand	66	66	10,000

2. When several figures stand side by side, the value of each figure depends on its place as counted from the right wards the left. A figure standing in the first place signifies so many units, or ones; the same figure, in the second place, signifies so many tens; in the third place, hundreds; in the fourth place, thousands; in the fifth place, tens of thousands; and in the sixth place, hundreds of thousands. Therefore every time a figure is removed one place to the left, its value is made ten fold, as may be seen in the following table.

ds of thousands. ? thousands. nds.			
ndre ng ol ousa	ns. its.		
HELE	Ten		
111.	111,	read	One hundred and eleven thousand, one hundred and eleven.
	4	66	Four.
	49	66	Forty-nine.
	496	66	Four hundred and ninety-six.
4.	965	66	Four thousand nine hundred and sixty-five.
49.	652	66	Forty-nine thousand, six hundred and fifty-two.
496,	527	"	Four hundred and ninety-six thousand, five hundred and
	4		twenty-seven.
3.	Let	t the	e pupil read the following numbers :

1.	34	5.	142	9.	6,744	13.	1,504
2.	76	6.	279	10.	8,329	14.	50,603
3.	68	7.	758	11.	4,960	15.	124,769
4.	95	8.	423	12.	9,080	16.	784,984

4. Let the pupil express the following numbers in figures : --

- 1. Seventy-eight.
- 2. Ninety.
- 3. One hundred and fifty-six.
- 4. Three hundred and eight.

- 5. One thousand, four hundred and sixty-nine.
- 6. Five thousand and two.
- 7. Seventy-seven thousand and eighty-four.
- 8. Forty thousand, seven hundred and twenty-two.
- 9. Five hundred and sixty-six thousand, one hundred and fifty.
- 10. Six hundred thousand.

#### ADDITION.

5. 5 and 4 and 7 are how many? This is called a question in *addition*. We put together or *add* the numbers, 5, 4, and 7 to find their *sum* or *amount*. Thus, the sum of 5 and 4 and 7 is 16.

Ex. 1. What is the sum of 46 and 37?

It is most convenient to write the numbers in order, units under units, tens under tens, &c.; then beginning with the units, we find that 6 units and 7 units are 13 units, or 1 ten and 3 units. We write down the 3 units under the units and add the 1 ten to the other tens; 1 (ten) and 4 (tens) and 3 (tens) make 8 (tens) which written with the 3, makes 83.

Ex. 2. What is the sum of 736 and 875 and 394?

Adding the units we find 6 and 5 are 11, and 4  $\stackrel{\text{sigmatrix}}{=}$  are 15, or 1 ten and 5 units. Writing the 5 under  $\stackrel{\text{sigmatrix}}{=}$  the column of units, we reserve the 1 ten and add 7 3 6 it to the tens of the next column; thus, 1 and 3 are 8 7 5 4, and 7 are 11, and 9 are 20 (tens) or 2 hundreds,  $\frac{3 9 4}{2005}$  and 0 tens. We write the 0 under the column of tens, and add the 2 (hundreds) to the column of are 20 (hundreds; thus 2 and 7 are 9, and 8 are 17, and 3 are 20 (hundreds), which being the sum of the last column we write down. The answer, therefore, is 2005.

6.	Add	the fol	llowing	:				
8.	4.	5.	· 6.	7.	8.	9.	10.	11.

-		-	-		unananan and and

7. 40. Add together 39, 67, 92, 43, 84, 51.

41. Add together 270, 489, 126, 46.

42. Add together 2368, 235, 496, 1736.

43. Add together 66,476, 801, 4009, 32, 127.

8. 44. A merchant bought 4 pieces of cloth; for the first piece he gave 53 dollars; for the second, 78 dollars; for the third, 68 dollars; and for the fourth, 67 dollars. How much did he give for the whole?

45. In an orchard there are 22 peach-trees, 95 appletrees, 17 pear-trees, and 56 plum-trees. How many trees in the orchard?

46. A man bought four horses; for the first he gave 84 dollars; for the second, 150 dollars; for the third, 475 dollars; and for the fourth, 526 dollars. How much did he give for all the horses?

47. In the Boylston school there are 810 scholars; in the Brimmer, 597 scholars; in the Dwight, 956 scholars; in the Elliot, 776 scholars; in the Franklin, 572 scholars; and in the Hancock, 731 scholars. How many scholars in these six schools?

48. A gentleman, building a house, paid the mason 2,964 dollars, the carpenter 5,723 dollars, the plasterer 625 dollars, and the painter 354 dollars. How much did the whole house cost?

[See page 173.]

166

#### SUBTRACTION.

**9.** 9 less 7 are how many ? This is called a question in *Subtraction*. We take away or *subtract* 7 from 9 to find the difference or *remainder*, which is 2.

Ex. 1. From 476 take 245.

It is most convenient to write the less number under the greater, units under units, tens under tens, etc., as in addition. Beginning at the units, 4 7 6 we say 5 from 6 leaves 1, which we write under 2 4 5 the units; then 4 (tens) from 7 (tens) leaves 3 tens, which we write under the tens; and 2 (hundreds) from 4 (hundreds) leaves 2 (hundreds, which we write down, and the answer is 231.

Ex. 2. From 939 take 458.

In this example we take 8 from 9 and there remains 1, which we write down; but since we cannot take 5 (tens) from 3 (tens), we borrow 1 9 3 9 (hundred) or 10 (tens) from the 9 (hundreds,)  $\frac{458}{481}$  which, joined with the 3 (tens), makes 13 (tens); then 5 (tens) from 13 (tens) leaves 8 (tens), which we write down. As one of the 9 (hundreds) has been put with the three (tens), there remains but 8 (hundreds). Therefore we say 4 (hundreds) from 8 (hundreds) leaves 4 (hundreds). This, written down, makes the answer 481.

		-					

 37. From 96 take 58.
 41. From 984 take 176.

 38. From 4785 take 3679.
 42. From 4788 take 967.

39. From 8344 take 5324. 43. From 7898 take 6898.

40. From 10982 take 6470. 44. From 40816 take 5622.

10. 45. In a certain garden there were 86 rose-bushes, but the worms destroyed 33 of them. How many were left?

46. A man is 66 years of age, and his son 22. How old was the man at the birth of his son?

47. A man gave 240 dollars for his carriage, and 121 dollars for his horse. How much more did he give for his carriage than for his horse?

48. Harry had 84 cents given him to buy some marbles with, but on his way to the store he lost 25 cents. How many cents had he left?

49. A girl was carrying 72 eggs to market, but she let the basket fall, and 39 eggs were broken. How many had she left?

50. In an army there were 14,642 men, but in a battle 789 men were killed or wounded. How many serviceable men were there left?

## MULTIPLICATION.

11. 7 times 5 are how many? This is called a question in multiplication. To obtain the answer we repeat or multiply the number 5, 7 times ; thus, 7 times 5 are 35.

Ex. 1. Multiply 564 by 7.

Hundreds. Tens. Units. Writing the numbers thus, the 7 under the units, we say, 7 times 4 (units) are 28 (units), or 2 tens and 8 units. We write down the 8 (units) and reserve the two (tens); then, 7 times 6 564 (tens) are 42 (tens) and the 2 (tens) which we 7 reserved are 44 (tens) or 4 hundreds and 4 tens. 8948 We write the 4 (tens) and reserve the 4 (hundreds); then, 7 times 5 (hundreds) are 35 (hundreds), which, with the 4 (hundreds) we reserved are 39 (hundreds) or 3 thousands and 9 hundreds. This we write down, and the answer is 3948.

	2.		8.	4.	Б.	6. 7.	8.

		15.		16.	1	7.	18.
Multiply	8	813		962	12	43	2104
By		3		8		2	4
		19.		20.		21.	22.
Multiply		5 .34		7110	8	947	4355
By		6		7		9	8

23. Multiply 129 by 35.

bousands.

Hundreds. Tens. Units. Writing the numbers in order, units under units, and tens under tens, we multiply, first, by the 5 units, and write the result in its proper place, as when we multiplied by one figure. We multiply 129 next by the 3 (tens) and write the first figure of 3 5 the result in the place of tens, because units mul-645 tiplied by tens ought to produce tens. Then add-387 ing together the results obtained by multiplying 4515 by the 5 (units) and 3 (tens), their sum will be 4515, which is the answer.

46. How much will 48 barrels of flour cost at 8 dollars a barrel ?

47. In a room there are 9 windows with 16 panes of glass in each. How many panes of glass in all the windows?

48. If a man receive 47 dollars a month, how much will he receive in twelve months?

49. How much will 126 tons of hay cost, at 13 dollars a ton?

50. There are 365 days in a year. How many days in 19 years?

[See page 175.]

#### DIVISION.

12. 24 are how many times 8? This is called a question in *division*, because we *divide* or separate the larger number into as many equal parts as there are units in the smaller number.

13. The number to be divided is called the *dividend*, the number by which we divide, the *divisor*; and the result, the *quotient*. If anything is left after the division, it is called the *remainder*.

14. Ex. 1. Divide 425 by 5.

 $\vec{t}_{i,i}$   $\vec{t}_{i}$   $\vec{t}_{i}$  $\vec{$  (tens) times with 2 (tens) remaining. We write down the 8 (tens) under the tens and suppose the remainder 2 (tens) written at the left of the next figure of the dividend making the number 25. 5 is contained in 25, 5 times without remainder. We write the 5 underneath and the division is completed.

Division performed in this way is called short division.

15. Perform in this way the following examples:

	2.		8.	4.	5.	6.	7.
Drylaor.	3)9	Dividend.	<b>P)26</b>	3)36	4)8	88 5)15	3)18
	3	Quotie <b>nt.</b>	-				-
8.		9.	10		11.	12.	13.
7)21		9)36	6)4	8	8)72	9)81	4)40
				-			
14.		15.	16.		17.	18.	19.
6)72		2)444	4)256	3 3	)963	7)847	9)279
20.		21	. 1	22.		23.	24.
5)682	25	6)46	50	9) ##79	2	4)4484	8)1312

16. When the divisor consists of two or more figures, it is more convenient to perform the operation in the following manner :

25. Divide 354 by 13.

	Hundreds.	Tens.	Unita.	Tens.	Units.	
Divisor. 13)	3	5	4	(2	7	
	2	6				
	_	9	4			
		9	1			
		-	3	r.		

We write the dividend and draw a curved line on both sides of it. We first inquire how many times 13 is contained in 35 (tens) the first two figures of the dividend. We find that it is contained 2 (tens) times.

Place the 2 (tens) at the right of the dividend as the first figure of the quotient, and then multiplying the divisor 13 by the 2 tens, write the product 26 (tens) under the 35 (tens) of the dividend, and subtract. To the remainder 9

(tens) we annex 4, the next figure of the dividend, and find how many times the divisor 13 is contained in 94. It is contained 7 times. Write the 7 (units) at the right of the 2 (tens) in the quotient and multiply the divisor by the 7 (units). Write the product 91 under the 94 and subtract, and there is left a remainder of 3. 13 is therefore contained in 354 27 times with 3 remainder.

Division performed in this way is called long division.

17. Perform in this way the following examples:

26.	27.	28.	- 29.
13)286(22	15)235(	17)425(	18)585(
26			
26	2 11		
26

84.	35.	36.	87
3)3016(	17)2057(	19)2994(	15)4445(
88. Divide	144 by 12.	41. Divide	5456 by 22.
39. Divide	225 by 15.	42. Divide	1411 by 36.
40. Divide	180 by 12.	43. Divide	8844 by 22.

44. How much sugar at 9 cents a pound can be bought for 81 cents?

45. If an acre of land cost 13 dollars, how many acres can you buy for 351 dollars ?

46. If a man can walk 21 miles in a day, how long will it take him to walk 273 miles?

47. A man divided 23,796 dollars among his 6 children. How much did each receive?

48. A railroad company employed 65 workmen, and at the end of the month it took 1755 dollars to pay them. How much did each man receive ?

49. There are 24 hours in one day; how many days are there in 1656 hours?

50. At 97 dollars a ton, how many tons of iron may be bought for 8439 dollars.

[See page 175.]

#### TABLES OF PROBLEMS FOR THE BLACKBOARD.

#### ADDITION.

These Tables are designed to furnish a number of problems for solution on the Blackboard. They can be used in a great variety of ways; thus in the table for Addition the numbers can be added as they stand; two or more can form a problem; the short columns can be added, &c.

In the study of Mental Arithmetic, too much stress can hardly be put upon the importance of an intimate familiarity with the tables of Addition, Subtraction, Multiplication, &c. On this account it has been thought best to insert here the Multiplication Table, which may be referred to with profit in the earlier lessons of the book, and until, in all its conditions, it is entirely familiar to the young learner.

1	2	3	4	5	6	7	8	9	10	11	12

# MULTIPLICATION TABLE.

To find how many 8 times 6 are, put your finger on the 8 in the left-hand column; then move the finger to the right till it comes under the 6 in the top line, and there you find 48, which is 8 times 6. In the same manner learn the whole table.

### Illustrated Books.

- PICCIOLA. By X. B. Saintine. A new translation from the Author's last revised edition. With Illustrations on wood, from designs by Leopold Flameng, and ornamental head and tail pieces. Fine edition. In one volume, erown 8vo. Price in extra cloth, gilt, \$1.75; half Roxburgh, \$4.50; Turkey morocco, \$6.00. 16mo edition, cloth, \$1.25.

## 541733

#### UNIVERSITY OF CALIFORNIA LIBRARY

STORIES FROM MY ATTIC. By Horace E. Scudder. In one volume, 16mo, \$1.50.

JOHN GAY; or, Work FOR BOYS. By Jacob Abbott. In four volumes, 18mo, \$3.00.

Any of the books mentioned in the list will be sent by the Publishers free of carriage, on the receipt of the advertised price. The prices named are for cloth binding, unless otherwise stated. A general descriptive Catalogue of Hurd and Houghton's Publications will be sent to any address on receipt of postage stamp.

## The Great English Olassic in a Convenient Form.

### PARADISE LOST.

With explanatory notes prepared under the advice and with the assistance of Professor H. W. TORREY, of Harvard University. In one volume, 16mo. Cloth, \$1.25; full gilt, \$1.75.

"The classical allusions, references to mythology and history, as well as not very obvious expressions and words, need exposition, which is found here in brief foot-notes, which are prepared with a full view of the wants of the reader. The edition is otherwise neat, portable, and in all respects desirable. The two indexes add great value to the work." — *The Presbyterian*.

"In these two most important particulars (a correct text and a judicious punctuation), as well as in the full but brief and very intelligible notes, I find the care and learning of the editor manifest, without ostentation, on almost every page." — James Jennison, Tutor in Elocution at Harvard College.

"The perfection of book-making, and every way a most desi able edition." - Hartford Press.

### A BRIEF BIOGRAPHICAL DICTIONARY.

Compiled and arranged by CHARLES HOLE, B. A., of Trinity College, Cambridge; with additions and corrections by William A. Wheeler, M. A., Associate Editor of Webster's Dictionaries. In one volume, 16mo. Cloth, \$1.50; half morocco, \$3.00.

"The English edition contains more than 18,000 entries, and to those Mr. Wheeler has added many hundreds of American and a considerable number of European names omitted by the English exitor. Thus in the short space of five hundred pages the reader has the compressed results of as many volumes. The book takes up but little room, but it is a kind of *Biographie Universelle* to the reader or writer who desires to carry in his pocket the means of finding or verifying dates." — Boston Transcript.

PUBLISHED BY HURD AND HOUGHTON, NEW YORK: THE RIVERSIDE PRESS, CAMBRIDGE.
